PENNSYLVANIA ALLERGY & ASTHMA ASSOCIATION

73RD PAAA ANNUAL MEETING

JUNE 24-26, 2022 | THE HOTEL HERSHEY, HERSHEY, PA

ONSITE PROGRAM

PAAA
Pennsylvania Allergy & Asthma Association

CONTENTS

PAAA

Pennsylvania Allergy & Asthma Association

Purpose and Target Audience

Allergists, Immunologists, Pulmonologists, Family Practitioners, Certified Registered Nurse Practitionersand Physician Assistants with the most current and up-to-date treatments and scientific informationregarding allergy, asthma, and immunology.

Program Outcomes

At the conclusion of this learning activity, participants should be able to:

- Apply new knowledge in a variety of topics to improve identification and screening practices to help them choose appropriate biologics and appropriate therapies for their patients.

Accreditation

For Physicians:

This activity has been planned and implemented in accordance with the accreditation requirements and policies of the Accreditation Council for Continuing Medical Education (ACCME) through the joint providership of the Pennsylvania Medical Society and Pennsylvania Allergy and Asthma Association. The Pennsylvania Medical Society is accredited by the ACCME to provide continuing medical education for physicians.

The Pennsylvania Medical Society designates this live activity for a maximum of *12.25 AMA PRA Category 1 Credit(s)™*. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

Faculty and all others who have the ability to control the content of continuing medical educationactivities sponsored by Pennsylvania Medical Society are expected to disclose to the audience whetherthey do or do not have any real or apparent conflict(s) of interest or other relationships related to the content of their presentation(s).

CME Program Evaluation and Credit

You will receive an email with instructions on how to access the online evaluation immediately following the course. In order to receive CME credit, you must complete the online evaluation and submit an electronic attestation form. This evaluation is necessary in order to meet CME requirements established by the Pennsylvania Medical Society. If you need to update your email address, please stop by the PAAA registration desk to do so. This information will not be shared with outside parties or companies and is for the sole use of CME evaluation purposes.

The evaluation will be available starting Monday, June 27, 2022.

CME Disclosures

Financial relationships reported by members of the Pennsylvania Allergy and Asthma Association's Planning Committee are provided below. During all phases of planning for the Annual Meeting areas of conflict were managed through a peer-review process and/or through individual recusal when appropriate.

The Planning Committee has reviewed all presenter disclosure reports, identified potential conflicts of Interest, and implemented strategies to manage those areas of conflict, where they exist

Name	Company Name	Nature of Relationship
Supinda Bunyavanich, MD, MPH, MPhil		Nothing to Disclose
Hey Chong, MD*		Nothing to Disclose
Megan Cooper, MD, PhD	Enzyvant	Consultant
Carla Davis, MD	DBV Regeneron	Researcher Researcher
Magee DeFelice, MD*		Nothing to Disclose
Alexandra Freeman, MD		Nothing to Disclose
Gisoo Ghaffari, MD*		Nothing to Disclose
Torie Grant, MD, MHS		Nothing to Disclose
Tanya Laidlaw, MD	AstraZeneca, GSK, Regeneron	Consultant
David Stukus, MD	Before Brands, Inc. DBV Technologies Novartis	Consultant Research Consultant
Paige Wickner, MD, MPH	CVS Health	Employee

** Designates a Pennsylvania Allergy and Asthma Association Program Committee member.*

Notice of Disclaimer

The information presented is that of the contributing faculty and does not necessarily represent the views of the Pennsylvania Allergy and Asthma Association, the CME accreditor, Pennsylvania Medical Society, and/or any named commercial entity providing financial support.

The Pennsylvania Allergy and Asthma Association makes every effort to ensure that speakers are knowledgeable authorities in their fields. Seminar attendees are nevertheless advised that the statements and opinions expressed by seminar speakers are those of the speakers, not that of Pennsylvania Allergy and Asthma Association. The speakers' statements and/or opinions should not be construed as Pennsylvania Allergy and Asthma Association policy or recommendations, and Pennsylvania Allergy and Asthma Association disclaims any liability or responsibility for the consequences of any actions taken in reliance upon those statements or opinions.

PAAA 2022 Annual Meeting Agenda

Thursday, June 23, 2022	
4:00 p.m. – 6:30 p.m.	**Registration & Exhibitor Set Up** Garden Terrace Lobby & Starlight Terrace Ballroom
Friday, June 24, 2022	
7:30 a.m. – 7:50 a.m.	**Registration Open/Continental Breakfast/Visit with Exhibitors** Garden Terrace Lobby & Starlight Terrace Ballroom
7:50 a.m. – 8:00 a.m.	**Welcome and Introductions** Garden Terrace Ballroom Sigrid DaVeiga, MD 2021–2022 PAAA President
8:00 a.m. – 8:45 a.m.	**COVID-19 in Primary Immune Deficiencies** Alexandra Freeman, MD
8:45 a.m. – 9:30 a.m.	**2020 Updates to Asthma Management Guidelines: SMART Dosing in Asthma** Torie Grant, MD, MHS
9:30 a.m. – 10:15 a.m.	**Asthma: Lessons from the Upper Airway** Supinda Bunyavanich, MD, MPH, MPhil
10:15 a.m. – 10:45 a.m.	**Refreshment Break/Visit Exhibitors** Starlight Terrace Ballroom
10:45 a.m. – 11:30 a.m.	**The Hyper IgE Syndromes** Alexandra Freeman, MD
11:30 a.m. – 12:15 p.m.	**The Microbiome and Food Allergy** Supinda Bunyavanich, MD, MPH, MPhil
12:15 p.m. – 1:00 p.m.	**Mayer A. Green, MD Allergy Foundation Memorial Lecture** **The Promise and Limits of Food Allergen Immunotherapy** Carla Davis, MD
1:00 p.m.	**Adjournment of PAAA Educational Activities**
1:30 p.m. – 2:30 p.m.	**Non-CME ISS Program** Tea House Room *Evidence for Using a Biologic to Treat Two Different Eosinophil-Driven Diseases: Severe Eosinophilic Asthma and Chronic Rhinosinusitis with Nasal Polyps*
6:30 p.m. – 7:30 p.m.	**Non-CME ISS Program** Tea House Room *Dual Inhibition: Targeting Systemic and Localized Type 2 Inflammation in Asthma*
8:00 p.m. – 10:00 p.m.	**Dessert Reception with Exhibitors** Starlight Veranda **Pre-Registration Required*

PAAA 2022 Annual Meeting Agenda

Saturday, June 25, 2022	
6:30 a.m. – 7:30 a.m.	**Non-CME ISS Program** Overlook Room *Challenges Associated with Respiratory Viral Infections in Patients with Primary Immunodeficiency: An Expert Discussion & Real-World Experience*
7:00 a.m. – 7:50 a.m.	**Registration Open/Continental Breakfast/Visit with Exhibitors** Garden Terrace Lobby & Starlight Terrace Ballroom
7:50 a.m. – 8:00 a.m.	**Welcome and Introductions** Garden Terrace Ballroom Hey Chong, MD 2022 Program Chair
8:00 a.m. – 8:45 a.m.	**Operationalizing an Allergy Framework for COVID-19 Vaccinations** Paige Wickner, MD, MPH
8:45 a.m. – 8:55 a.m.	**PAERF Grantee Presentation** Presenter: Stanislaw Gabryszewski, MD, PhD *Investigating epidemiologic and immunologic relationships between systemic and gastrointestinal food allergies*
8:55 a.m. – 9:00 a.m.	**Recognition of Long-Standing Attendees and In Memoriam** Janet Beausoleil, MD Historian
9:00 a.m. – 9:45 a.m.	**Recognizing Health Disparities in Food Allergy** Carla Davis, MD
9:45 a.m. – 10:15 a.m.	**Annual Business Meeting**
10:15 a.m. – 10:45 a.m.	**Refreshment Break/Visit Exhibitors**
10:45 a.m. – 11:30 a.m.	**AERD - Diagnosis and Treatment** Tanya Laidlaw, MD
11:30 a.m. – 12:15 p.m.	**Quality/Safety in the Allergy Practice** Paige Wickner, MD, MPH
12:15 p.m. – 1:00 p.m.	**Disparities in Asthma** Torie Grant, MD, MHS
1:15 p.m. – 2:45 p.m.	**WORKSHOP: Aspirin and NSAID Challenges** Tanya Laidlaw, MD
2:45 p.m.	**Adjournment of PAAA Educational Activities**
6:30 p.m. – 10:00 p.m.	**Fireside Social & Dinner*** DJ and Children's Activities with Hotel Hershey Staff Formal Gardens East **Pre-registration Required*

PAAA 2022 Annual Meeting Agenda

Sunday, June 26, 2022	
7:00 a.m. – 7:35 a.m.	**Registration Open/Continental Breakfast** Garden Terrace Lobby & Starlight Terrace Ballroom
7:35 a.m. – 7:45 a.m.	**Welcome and Introductions** Garden Terrace Ballroom Magee DeFelice, MD 2022 Assistant Program Chair
7:45 a.m. – 8:30 a.m.	**Rheumatology in the AI Clinic** Megan Cooper, MD, PhD
8:30 a.m. – 9:15 a.m.	**Patient Education in the Office** David Stukus, MD
9:15 a.m. - 9:45 a.m.	**Refreshment Break/Poster Presentations**
9:45 a.m. – 10:30 a.m.	**Immune Dysregulation** Megan Cooper, MD, PhD
10:30 a.m. – 11:15 a.m.	**Oral Food Challenges in Infants and Toddlers** David Stukus, MD
11:15 a.m.	**Adjournment of PAAA Educational Activities**
11:15 a.m. – 12:15 p.m.	**Farewell Brunch*** Starlight Veranda *Pre-registration Required

Total CME Hours Available: 12.25

PAAA
Pennsylvania Allergy & Asthma Association

Thank you to the Faculty Participants

Supinda Bunyavanich, MD, MPH, MPhil
Mount Sinai Endowed Professor in Allergy and Systems Biology
Icahn School of Medicine at Mount Sinai
Associate Director, Jaffe Food Allergy Institute

Megan Cooper, MD, PhD
Professor, Department of Pediatrics
Washington University School of Medicine
Director, Clinical Immunology, and the Jeffrey Modell Diagnostic and Research Center for Primary Immunodeficiencies,
St. Louis Children's Hospital Associate Director, Medical Scientist Training Program Program Director, Pediatric Rheumatology Fellowship Washington University School of Medicine

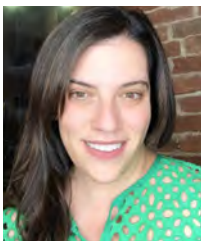
Carla Davis, MD
Professor, Department of Pediatrics and Pathology, Immunology, Allergy, and Retrovirology Director, Immunology, Allergy, and Retrovirology Division of the Department of Pediatrics
Baylor College of Medicine
Director, Texas Children's Hospital Food Allergy Program Chair, Janie and Sandra Queen Endowed in Immunology and HIV/AIDS
Chair, American Academy of Allergy, Asthma and Immunology Diversity Task Force

Alexandra Freeman, MD
Director, Primary Immune Deficiency Clinic
NIAID, NIH

Torie Grant, MD, MHS
Assistant Professor
Johns Hopkins University School of Medicine

Tanya Laidlaw, MD
Associate Professor of Medicine, Harvard Medical School Division of Allergy and Clinical Immunology Chief, Section of Clinical and Translational Sciences Director of the AERD Center Harvard Medical School/Brigham and Women's Hospital

David Stukus, MD
Professor of Clinical Pediatrics
Director, Food Allergy Treatment Center Associate Director, Pediatric Allergy & Immunology Fellowship Program Nationwide Children's Hospital and The Ohio State University College of Medicine



Paige Wickner, MD, MPH
Assistant Professor
Division of Allergy and Clinical Immunology
Harvard Medical School/Brigham and Women's Hospital

Pennsylvania Allergy Educational Research Foundation (PAERF)

The Pennsylvania Allergy Educational Research Foundation (PAERF) is the charitable arm of the Pennsylvania Allergy & Asthma Association that funds educational and research endeavors related to the field of allergy and immunology. PAERF funds PAAA Annual Meeting fellows in training travel reimbursements that may be awarded to each training program in Pennsylvania. This fund allows the future leaders of our profession the opportunity to share their work through poster presentations and to participate in the meeting.

2022 Donors

(through May 16, 2022)

Janet L Beausoleil MD

Pennsylvania Allergy & Asthma Association

The PAERF Research Grant

Empowering the next generation!

"I am very grateful to the PAERF committee and sponsors, who played an instrumental role in supporting my research. The PAERF grant supported my continued training as an independent researcher, fostered fruitful collaborations, and helped enrich my knowledge about allergic disease epidemiology and mechanisms underlying systemic and gastrointestinal food allergies. Thanks to this experience, I feel empowered to continue pursuing research questions stemming from my work over the past year as I continue my training."

Stanislaw J. Gabryszewski, MD
2021 PAERF Research Grant Recipient

- When donors are asked to donate, they want to know that their donation makes a measurable difference, no matter how small or large that difference may be.
- Your donation to PAERF makes a measurable difference.
  Your contributions *"help enrich knowledge about allergic diseases."*
  Your contributions *"empower"* our recipients to "continue to pursue research questions."
- Your contribution to PAERF ensures that there is a next generation of allergy/immunologists as dedicated and as skilled as you.

Give to PAERF for the future of our profession and ever-better outcomes for our patients.

Save the Date!

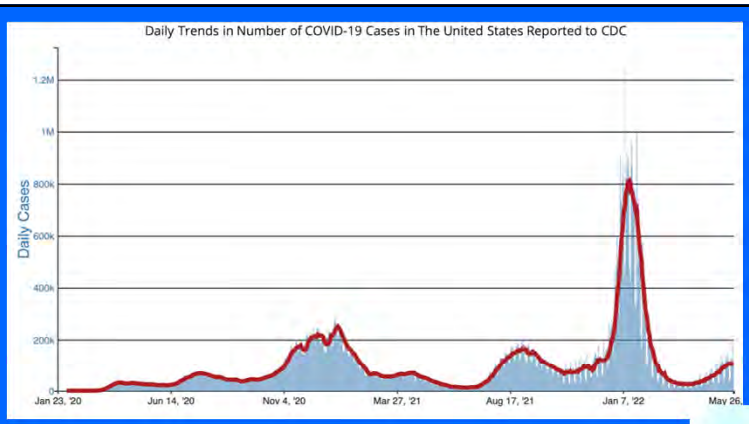
COVID-19 in Inborn Errors of Immunity

Alexandra Freeman MD
Director, Primary Immunodeficiency Clinic
NIAID, NIH
June, 2022

1



CDC.gov

Difficulties of Counseling patients in a Constantly Evolving Field

2

COVID-19 in STAT3 HIES in the pre-vaccine era

Age (years)	Gender	SARS-CoV2 PCR	Exposure	Duration (Days)	COVID-19 Severity	Complications	Outcome
12	F	+	PCR + Family Member	14	Mild	None	Recovered
14	F	Not Tested	PCR + Family member	14	Mild	None	Recovered
17	M	--	PCR + Family member	6	Mild	Residual Fatigue; 21 days	Recovered
24	F	--	PCR+ Work exposure	18	Mild	None	Recovered
26	M	+	High exposure work environment	14	Mild	Clinical worsening on day 7, treated with additional antibiotics	Recovered
27	F	+	Unknown	0	Asymptomatic	None	
41	M	+	Unknown	26	**Severe**	Pseudomonas co-infection; Multiorgan failure	**Died**
45	M	Not Tested	PCR + Work and family exposures	20	Mild	None	Recovered
28	M	+	Family member	10	moderate	Received antibiotics	Recovered; received monoclonal plus remdesivir

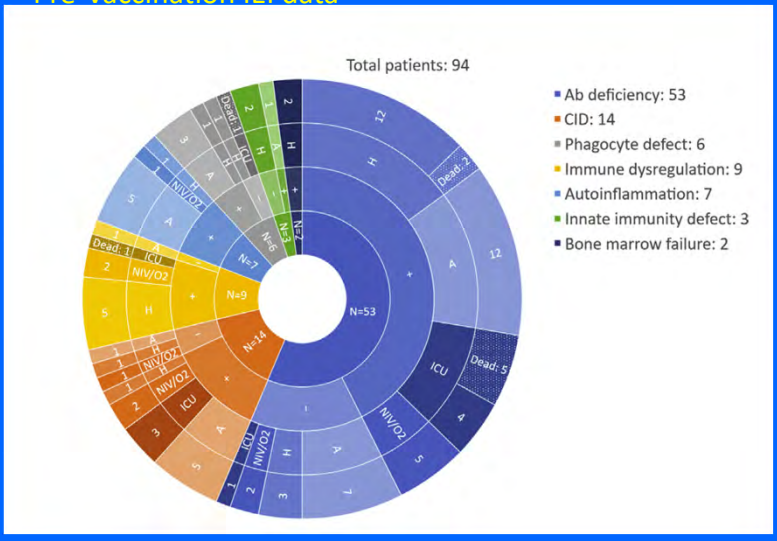
Post- vaccination: No hospitalizations yet
Also first year or so, less pulmonary infections with the major decrease in circulating respiratory viruses!

Fatality
41 year old Hispanic male
-obesity
-Bronchiectasis/pneumato-celes with MRSA and Pseudomonas chronic infection
-hypertension, prior MI with coronary artery aneurysms
-Busy hospital with many COVID cases

Hospitalized non-fatality:
s/p pneumonectomy, remaining lung with bronchiectasis/pneumatoceles
Chronic liver disease
Received oxygen by NC briefly

3

Pre-Vaccination IEI data

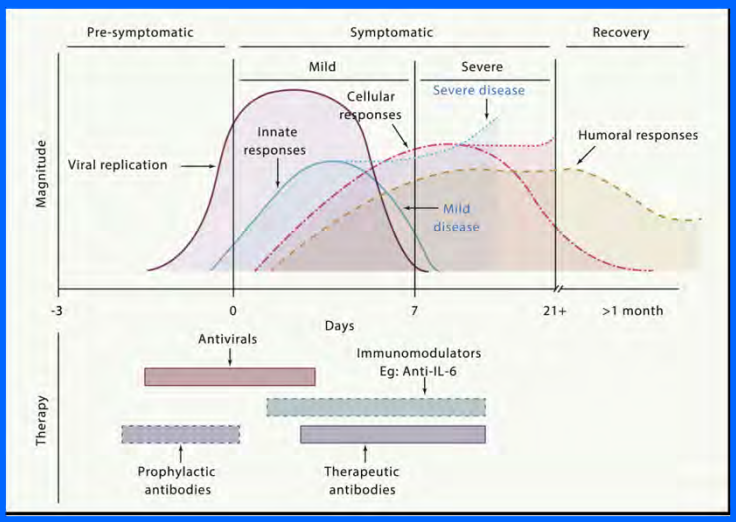


94 patients from around the world with varying IEIs
-CVID most common, than CID
->30% mild disease, and many more likely un-recognized or reported
-Case fatality 10% (not that different than reports at the time, not all causal)
-Increased severe disease in male
-Increased severe disease and mortality for those with other underlying disease
- Some with Interferonopathies on therapies had mild disease

Meyts et al, JACI 2021

4

Immune deficiency vs Immune dysregulation



First year saw evolving therapies for Severe COVID-19

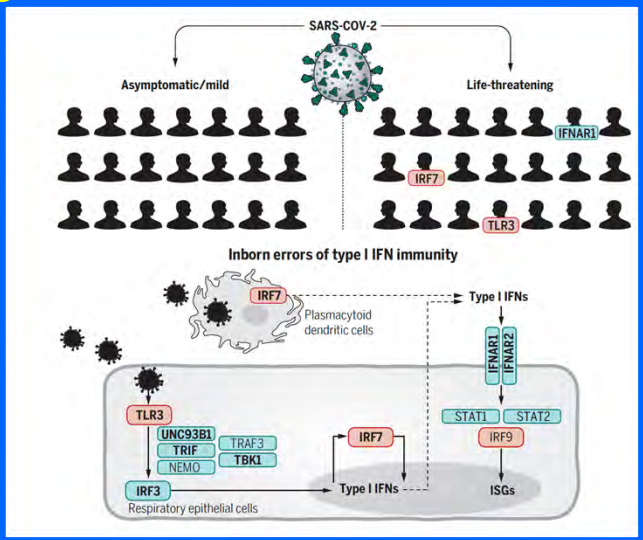
- Dexamethasone
- Tocilizumab
- Jak inhibitors

Subbaro, Immunity 2020

5

Searching for Immune defects in those with severe COVID-19

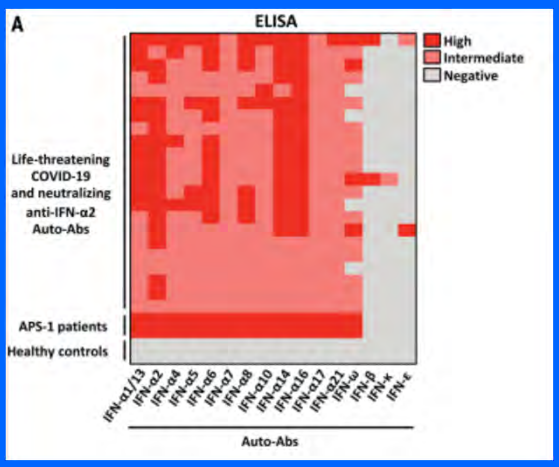
Type 1 IFN immunity Defects identified in 3.5% of 659 pts screened with severe disease compared to 534 with asymptomatic or mild



Zhang et al, Science 2020

6

Searching for Immune defects in those with severe COVID-19



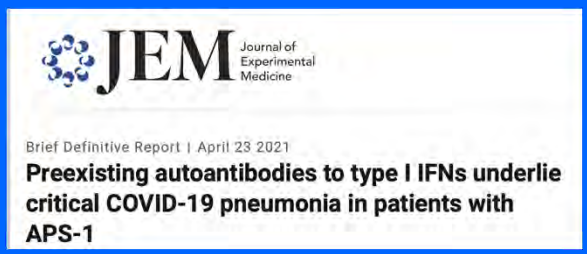
About 10% of those with severe COVID-19 were found to have neutralizing auto-abs against Type 1 IFNs
Increased in males, older patients. Most clinically silent until COVID-19.

Bastard, Rosen et al.
Science 2020

7

IEIs with IFN auto-antibodies, and immune dysregulation

- APECED
- Thymoma?
- CTLA4 Deficiency



22 patients, 21 checked and positive for anti-IFN auto-abs
86% hospitalized, 65% to ICU, 18% died

8

Concern of Persistent Shedding of Virus

16 year old with STAT1 GOF, s/p failed HSCT, bronchiectasis, IDDM, enteropathy. On ruxolitinib with reasonable control of disease.

October with mild COVID-19 symptoms (Delta wave) after one dose of mRNA vaccine.

Received monoclonal antibody infusion, with quick resolution of symptoms.

About 100 days later, lung pulmonary infection.

-NP swab SARS-CoV2 PCR negative, NP wash SARS-CoV2 PCR positive, BAL PCR negative…into isolation, symptoms improved with treatment of bacterial infections. Sequence of SARS-CoV2 : Delta variant

-5 months after COVID19 infection, NP swab PCR negative, saliva SARS-CoV2 PCR positive. Delta variant.

-Repeat vaccinations and Evusheld™ given for protection.

9

The Journal of Infectious Diseases

BRIEF REPORT

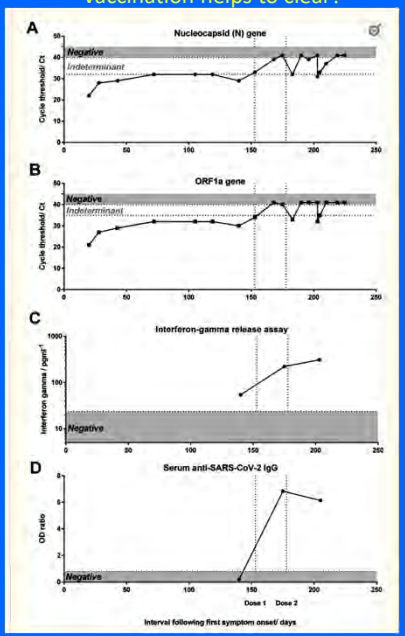
Yearlong COVID-19 Infection Reveals Within-Host Evolution of SARS-CoV-2 in a Patient With B-Cell Depletion

Veronique Nussenblatt,[1,a] Allison E. Roder,[2,a] Sanchita Das,[3] Emmie de Wit,[4,a] Jung-Ho Youn,[3] Stephanie Banakis,[2] Alexandra Mushegian,[2] Christopher Mederos,[2] Wei Wang,[2] Matthew Chung,[2] Lizzette Pérez-Pérez,[4] Tara Palmore,[5] Jennifer N. Brudno,[6] James N. Kochenderfer,[6] and Elodie Ghedin[2]

Therapy for persistent positivity??

- Convalescent serum is not the answer
  - Evasion with variants
- Repeat antivirals?
- Vaccination?
  - Patient with WAS reported to clear following vaccination

Vaccination helps to clear?

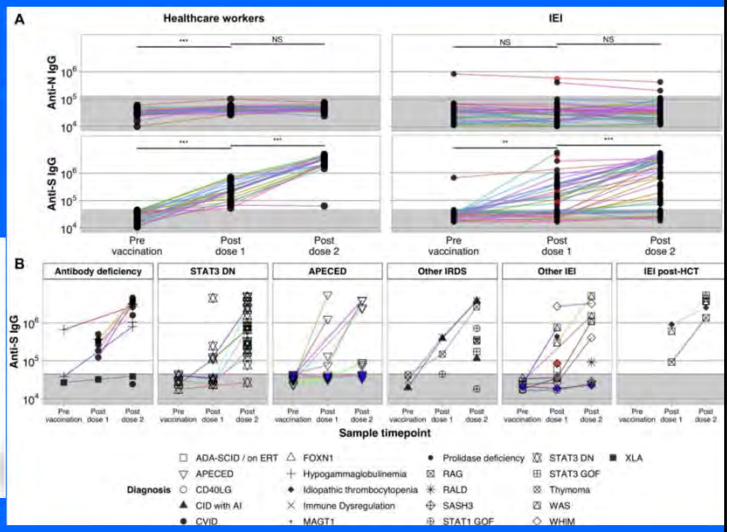


Bradley et al, J Clin Immunol 2022

10

Current Preventive Therapies Available

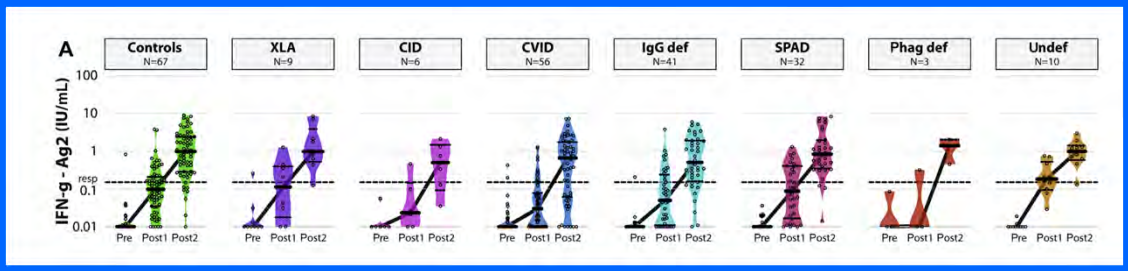
- VACCINATION!!!
  - 4 doses (>12 years) for those with immune suppression.



Delmonte, Bergerson et al, JACI 2021.

11

T cell responses post Vaccine too!



T cell response by Quantiferon assay. Leanne et al, JACI 2022

Important to still vaccine those without antibody responses, such as XLA.

12

Current Preventive Therapies Available

- Tixagevimab/cilgavimab (Evusheld)
  - 12 years and older, 40kg
  - Two shots given, well tolerated
  - Moderate to severe immune suppression
  - Seems to have activity against omicron, subvariants
  - Some activity for about 6 months?
  - Risk: slight increase in cardiac events for those with underlying cardiac history

13

Tixagevimab/cilgavimab during omicron pre-review, VA population

	Matched Controls N=6,354	Tixagevimab/cilgavimab recipients N=1,733	Propensity Score Survival Analysis	Difference in Difference^ Analysis

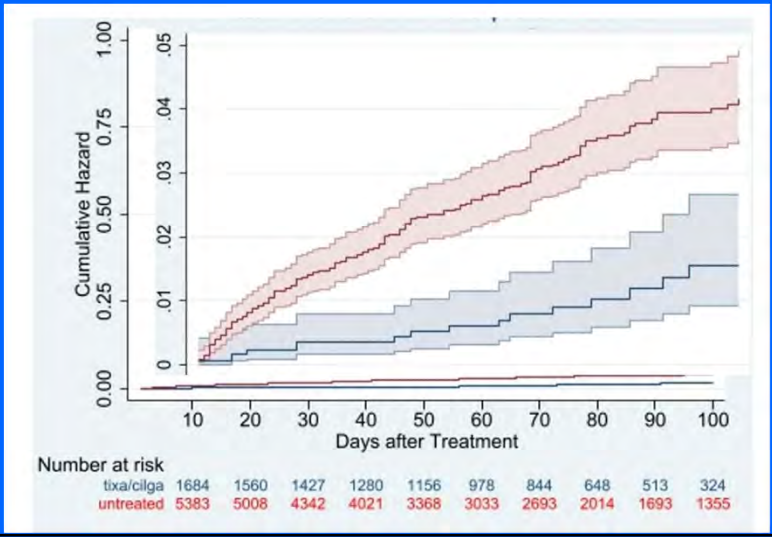
14

Tixagevimab/cilgavimab during omicron pre-review



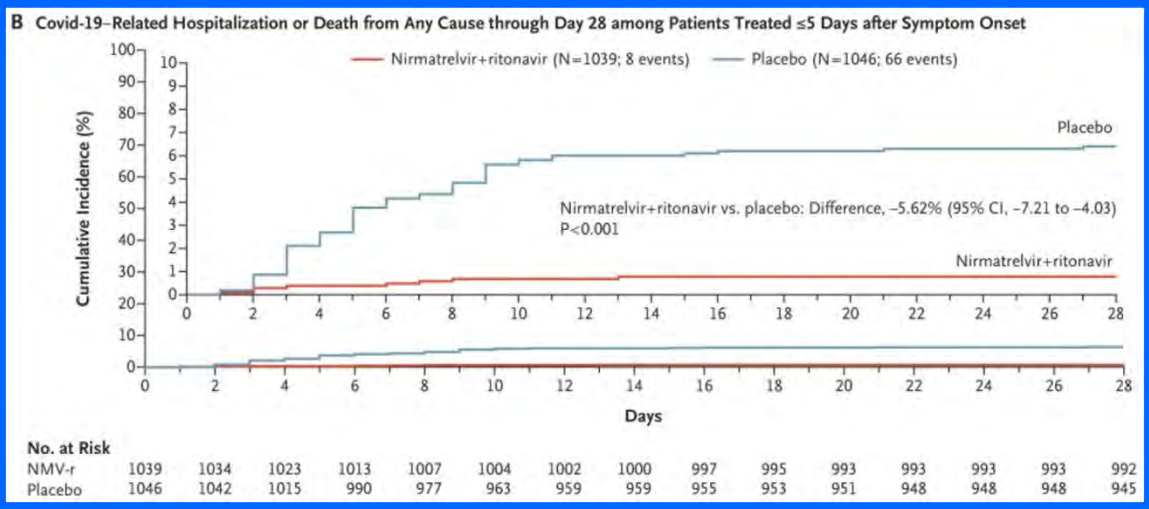
Young-Xu et al, 2022

15

Current Therapeutics for Outpatients

- Monoclonals
  - Rapidly changing with variants
    - Bebtelovimab- currently available for omicron and subvariants
- Anti-virals, oral
  - Nirmatrelvir plus ritonavir (Paxlovid)
    - Protease inhibitors (ritonavir boosts levels)
    - Decrease risk of hospitalization by 88% in phase 2/3 study
      - No deaths in study compared to 12 in placebo
    - Approved for 12 years and older with significant risk of severe disease
    - Start within 5 days of symptoms, give for 5 days
    - Dose adjusted for GFR 30-60, and not for use <30 GFR
    - Check for drug-drug interactions
    - Main side effect: Metallic taste in mouth

16



Hammond et al, NEJM 2022

17

Paxlovid™ rebound?

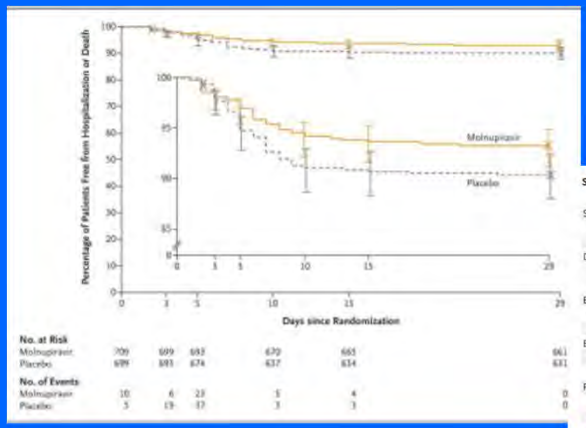
- Treated patients tested negative post therapy, and then tested positive again with some return of symptoms typically 2-8 days later
- Most with symptom resolution and test negativity again about 3 days later
- For most, mild symptoms, no need for repeat therapy.
- Evolving knowledge….will this be a bigger concern for our patients?

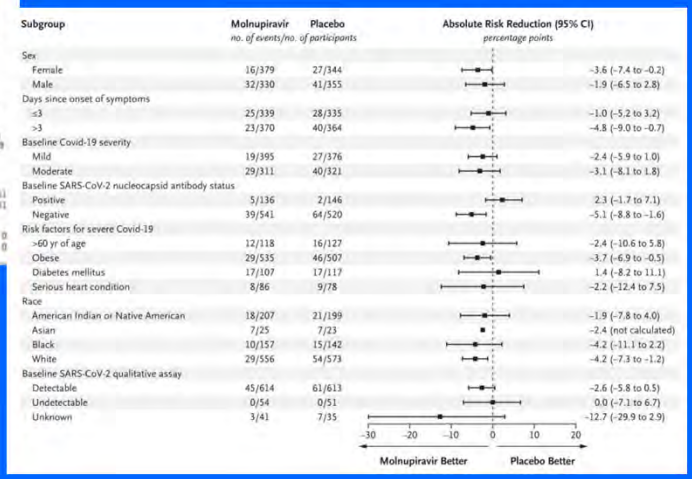
18

Current Therapeutics for Outpatients

- Molnupiravir
  - Cytidine nucleoside analogue that gets incorporated into the SARS-CoV2 RNA leading to errors in the RNA genome and inhibits replication
  - Decreased risk of hospitalization by 30%, and death by 89% in phase 2/3 study
  - Approved for 18 years old older with significant risk for severe disease
  - Start within 5 days of symptoms
  - 800mg BID x 5 days
  - No drug interactions.
  - No dose adjustments for renal or liver disease
  - Well tolerated
  - Mutagenicity potential- don't use in pregnancy!
  - Not approved for kids- may cause bone/cartilage issues

19





Jayk Bernal et al, NEJM 2022.

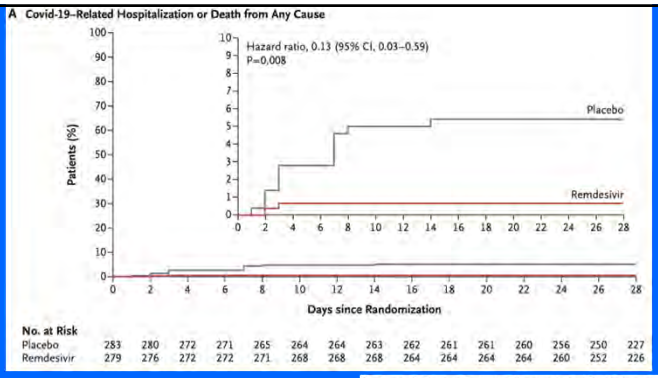
20

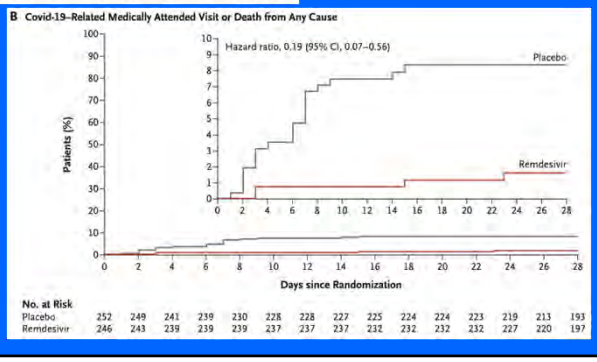
Current OutpatientTherapeutics

Remdesivir IV therapy

- Inhibits RNA polymerase
- 3 day therapy for outpatients to decrease need for hospitalization, mortality
- Well tolerated
- Not studied for GFR less than 30- but can be considered
- Dosing for children and adults
- Minimal drug interactions
- Well tolerated- can increase LFTs

21





Gottlieb et al, NEJM 2021

22

Outpatient Remdesivir

PENNSYLVANIA ALLERGY & ASTHMA ASSOCIATION

73RD PAAA ANNUAL MEETING

2020 Updates to Asthma Management Guidelines: SMART Dosing in Asthma

Presented by:
Torie Grant, MD, MHS

Friday, June 24, 2022
8:45 a.m. – 9:30 a.m.

PAAA
Pennsylvania Allergy & Asthma Association

2020 Updates to Asthma Management Guidelines: SMART Dosing in Asthma

Torie Grant, MD, MHS
Assistant Professor of Medicine and Pediatrics
Johns Hopkins University School of Medicine

1

Disclosures

- Current Funding
  - National Institutes of Health K23 Mentored Patient-Oriented Research Career Development Award
  - American Academy of Allergy, Asthma, and Immunology Foundation Faculty Development Award

2

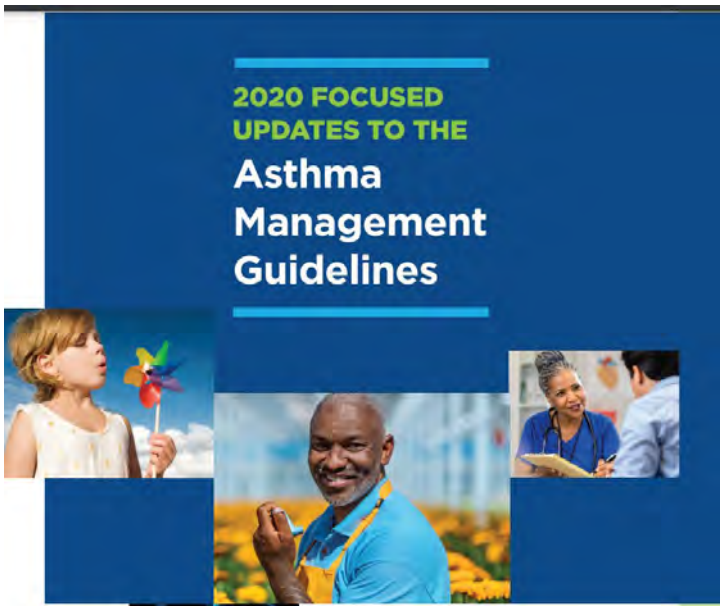
Objectives

1. Understand changes to the 2020 Asthma Management Guidelines regarding single maintenance and relieve therapy (SMART)

2. Review the literature supporting SMART

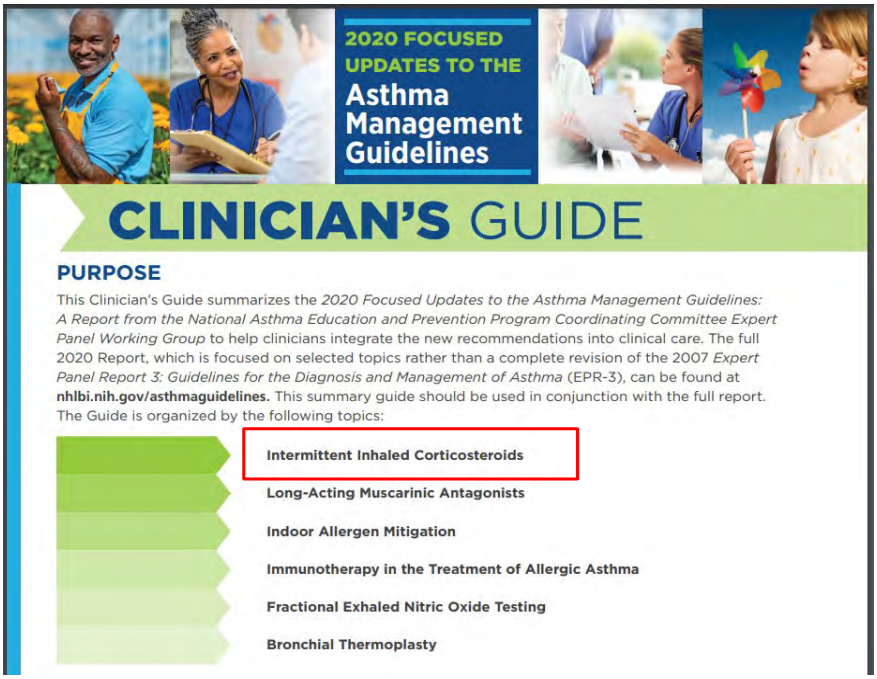
3. Identify the target population and patients who would benefit from SMART

3



https://www.nhlbi.nih.gov/resources/2020-focused-updates-asthma-management-guidelines

4



5

In a Nutshell…

- "In individuals ages 4 years and older, the preferred Step 3 (low-dose ICS) and Step 4 (medium-dose ICS) therapy is single-inhaler ICS-formoterol both daily and as needed. In the literature, inhaled ICS-formoterol is referred to as 'single maintenance and reliever therapy (SMART).'"

https://www.nhlbi.nih.gov/resources/2020-focused-updates-asthma-management-guidelines

6

In Summary

"In individuals ages ***4 years and older***, the preferred **Step 3 (low-dose ICS) and Step 4 (medium-dose ICS) therapy is single-inhaler ICS-formoterol both daily and as needed.** In the literature, inhaled ICS-formoterol is referred to as 'single maintenance and reliever therapy (SMART)." This form of therapy has only been used with ***formoterol as the LABA***. Formoterol has a *rapid onset and a maximum total daily dose that allows it to be used more than twice daily*. The maximum total daily dose of formoterol should not exceed **eight puffs (36 mcg) for ages 4–11 years** and **12 puffs (54 mcg) for ages 12 years and older**. SMART is administered with a single inhaler containing both formoterol and an ICS (primarily budesonide in the reviewed studies, but one study used beclomethasone). The regimens compared to address this key question required two inhalers: the controller (ICS or ICS-LABA) and the reliever (SABA). The recommended alternate therapy of maintenance *ICS-LABA with SABA as quick-relief therapy does not need to be changed if it is providing adequate control*. However, **patients whose asthma is uncontrolled on such therapy should receive the preferred SMART if possible before moving to a higher step of therapy**."

10

SMART for ages 5-11

- For individuals with moderate to severe persistent asthma already taking low- or medium-dose ICS (Steps 3 and 4) the **preferred treatment** is a single inhaler with **ICS-formoterol** used both daily and as needed.
- In Steps 3 and 4, the preferred option includes the use of ICS-formoterol 1 to 2 puffs as needed up to a maximum total daily maintenance and rescue dose of **8 puffs (36 mcg)**
- *Individuals with a severe exacerbation* in the prior year are particularly good candidates for SMART to reduce exacerbations.
- Do not use ICS-formoterol as reliever therapy in individuals taking ICS-salmeterol as maintenance therapy.
- Individuals whose asthma is uncontrolled on maintenance ICS-LABA with SABA as quick-relief therapy should receive the preferred SMART if possible *before moving to a higher step of therapy.*
- In children ages 4–11 years, there may be a lower risk of growth suppression among those taking SMART versus daily higher-dose ICS treatment.

14

SMART for ages 12+

- For individuals with moderate to severe persistent asthma already taking low- or medium-dose ICS (Steps 3-4), the **preferred treatment is a single inhaler with ICS-formoterol (SMART)** used both daily and as needed.
- In steps 3 and 4, the preferred option includes the use of ICS-formoterol 1 to 2 puffs as needed up to a maximum total daily maintenance and rescue dose of **12 puffs (54 mcg).**
- *Individuals with a severe exacerbation in the prior year* are particularly good candidates for SMART to reduce exacerbations.
- Do not use ICS-formoterol as reliever therapy in individuals taking ICS-salmeterol as maintenance therapy.
- Individuals whose asthma is uncontrolled on maintenance ICS-LABA with SABA as quick-relief therapy should receive the preferred *SMART if possible before moving to a higher step of therapy*

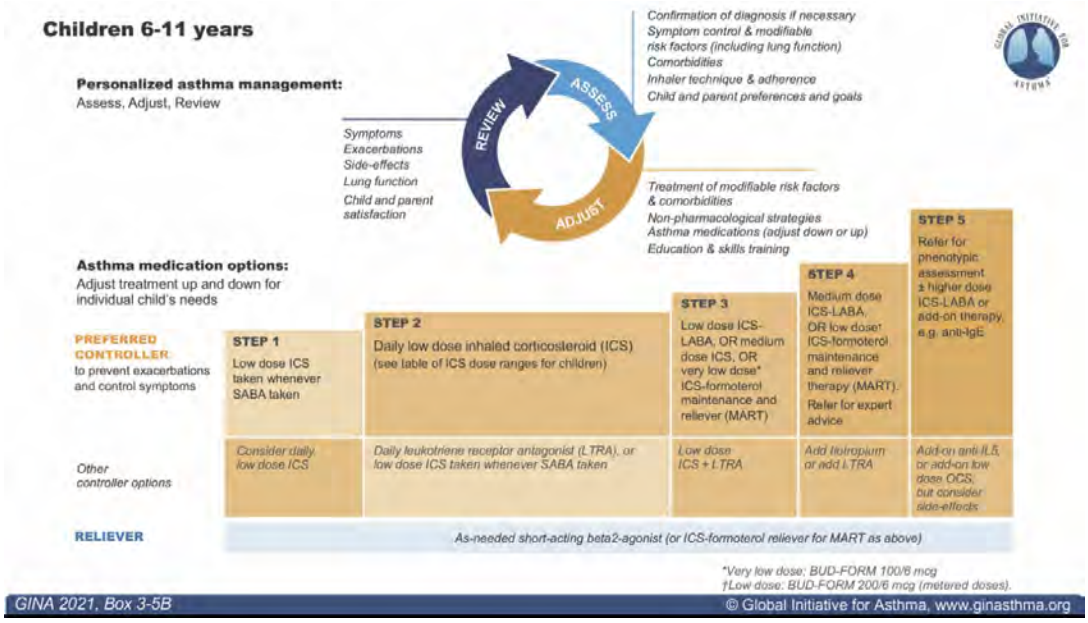
https://www.nhlbi.nih.gov/resources/at-glance-2020-focused-updates-asthma-management-guidelines

15

NAEEP vs. GINA?

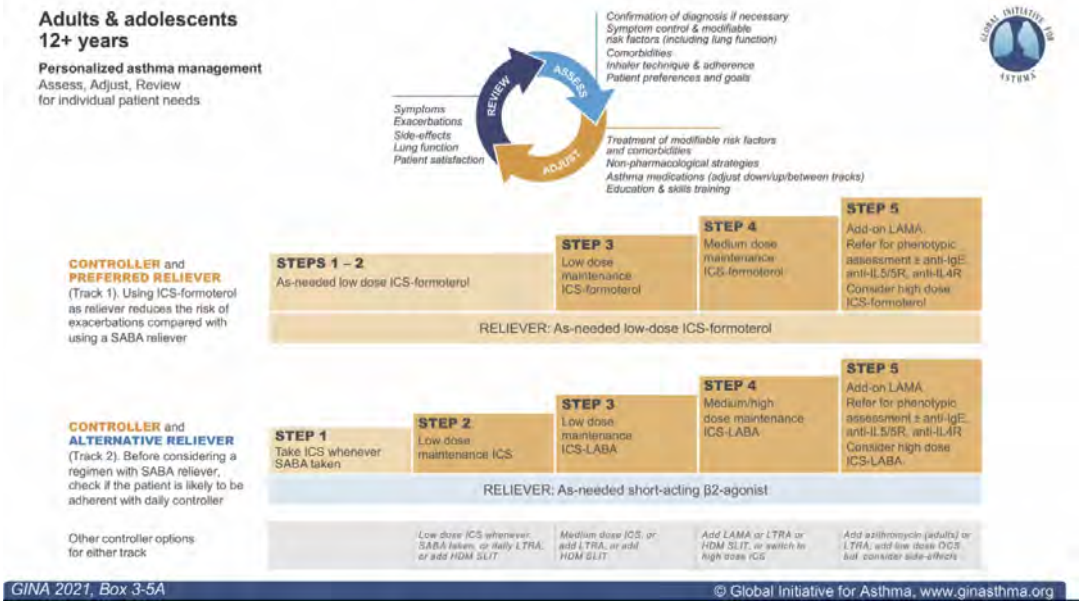
- GINA = Global Initiative for Asthma
- More of a living document with frequent updates
- Adopted SMART in 2014
- In 2019, low-dose ICS-formoterol became the preferred reliever or 12+ and is an option for 6-11 years

16



https://www.guidelinesinpractice.co.uk/respiratory/gina-asthma-strategy-whats-new-for-2021/

17



https://www.guidelinesinpractice.co.uk/respiratory/gina-asthma-strategy-whats-new-for-2021/

18

Why SMART?

- Let's review the evidence

19

Why formoterol?

- Onset of action is rapid like albuterol
- Patients get quick relief
- Has the added advantage of a longer duration of action

Reddel HK, *J Allergy Clin Immunol Pract.* 2022

Figure 2: **Kaplan–Meier plot of time to first severe asthma exacerbation**
Time to first severe asthma exacerbation defined as a deterioration in asthma resulting in hospitalisation, emergency room treatment, or the need for oral steroids for 3 days or more because of asthma (as judged by investigator). Patients received maintenance budesonide-formoterol 160/4·5 µg, one inhalation twice daily, plus one of the following for as-needed relief: additional inhalations of budesonide-formoterol 160/4·5 µg; formoterol 4·5 µg; or terbutaline 0·4 mg. Significant between-group differences were derived from a log-rank test.

Evaluation of Budesonide-Formoterol for Maintenance and Reliever Therapy Among Patients With Poorly Controlled Asthma

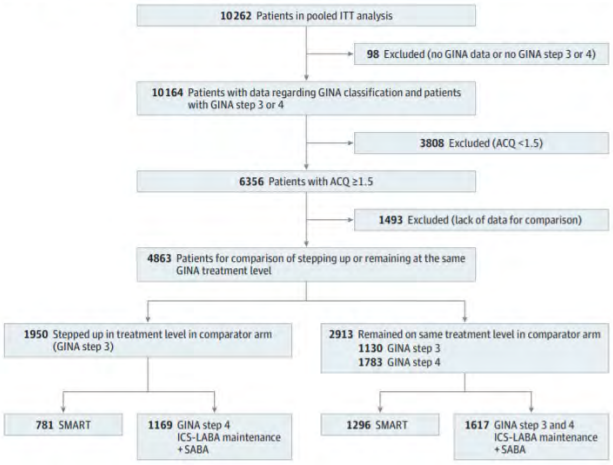
A Systematic Review and Meta-analysis

Richard Beasley, DSc; Tim Harrison, MD; Stefan Peterson, PhD; Per Gustafson, MD, PhD; Angus Hamblin, BA; Thomas Bengtsson, MSc; Malin Fageråas, PhD

JAMA Netw Open. 2022 Mar 1;5(3).

40

Figure 1. Flow Diagram of Patients Included in the Analysis



The initial total of 10 262 patients excludes the patients in the as-needed formoterol-only arm of the SMILE trial.[11] The 1493 patients excluded because of lack of data for comparison refers to patients receiving Global Initiative for Asthma (GINA) step 4 treatment in the SMILE[11] and SAKURA[12] trials, who corresponded to a step down in treatment level. ACQ indicates Asthma Control Questionnaire; ICS, inhaled corticosteroid; ITT, intention to treat; LABA, long-acting β_2-agonist; SABA, short-acting β_2-agonist; SMART, single maintenance and reliever therapy.

Beasley R, et al. *JAMA Netw Open*. 2022

41

Figure 2. Meta-analysis of the Association of Single Inhaler Maintenance and Reliever Therapy (SMART) vs Inhaled Corticosteroid-Long-acting β_2-Agonist (ICS-LABA) Maintenance Plus Short-acting β_2-Agonist (SABA) Reliever With Time to First Severe Exacerbation

A SMART vs step up to GINA step 4

Trial	No. exacerbation, No./total No. (%) SMART	GINA step 4	HR (95% CI)	P value
AHEAD[10]	29/371 (7.8)	38/373 (10.2)	0.77 (0.48-1.25)	.30
COMPASS[8]	29/372 (7.8)	84/774 (10.9)	0.71 (0.46-1.08)	.11
Patel et al,[9]	5/38 (13.2)	6/22 (27.3)	0.45 (0.14-1.49)	.19

Influenza	21 (2.1)	23 (2.2)	14 (1.3)
Sinusitis	15 (1.5)	17 (1.6)	24 (2.3)

* Adverse events are sorted in decreasing total frequency of preferred term in the *Medical Dictionary for Regulatory Activities*, version 24.0. Patients with multiple events in the same category are counted only once in that category.

Papi A, et al. *N Engl J Med*. 2022

51

Take home points

- SMART works
- It is associated with a reduction in time to severe exacerbation, reduced rate of severe exacerbations, improvements in FEV_1
- Overall, patients get lower doses of ICS and OCS

PENNSYLVANIA ALLERGY & ASTHMA ASSOCIATION

73RD PAAA ANNUAL MEETING

The Hyper IgE Syndromes

Presented by:
Alexandra Freeman, MD

Friday, June 24, 2022
10:45 a.m. – 11:30 a.m.

PAAA
Pennsylvania Allergy & Asthma Association

The Patient with Eczema and an elevated Serum IgE: when to suspect a Hyper IgE Syndrome

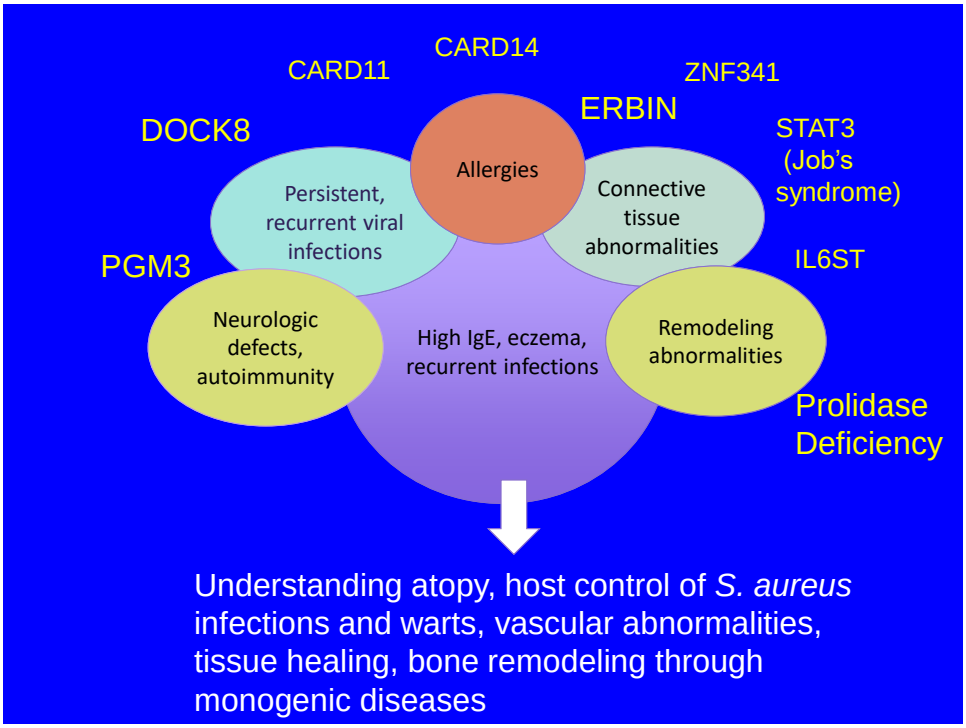
Alexandra Freeman MD
Director, Primary Immune Deficiency Clinic
Laboratory of Clinical Immunology and Microbiology

1

Approach to the patient with Elevated Serum IgE and eczema

- Most of the time atopy, without a "hyper IgE syndrome"
- Monogenic causes related to Primary immune deficiencies
  - Many causes of immune dysregulation can cause mildly elevated IgE (IgE hundreds)
  - The Hyper IgE syndromes are associated with eczema, recurrent skin and lung infections
  - Unique features to consider in the evaluation.

2



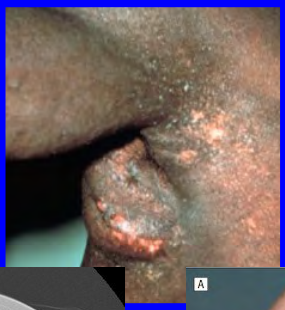
3

STAT3 deficient Hyper IgE Syndrome (Autosomal dominant HIES; Job's syndrome)

"So Satan went forth from the presence of the Lord, and smote Job with sore boils from the sole of his foot unto his crown."

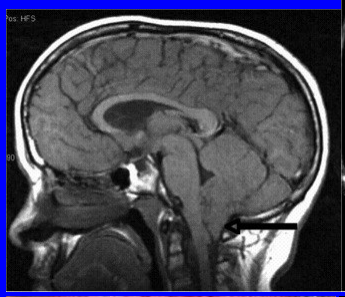
4

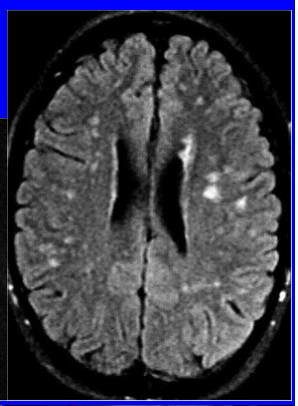
Staphylococcus aureus and *Candida* epithelial infections in LOF STAT3

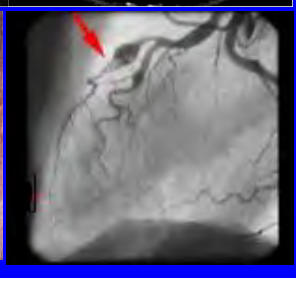


5

Skeletal, joint, dental, vascular abnormalities







6

The NEW ENGLAND JOURNAL of MEDICINE

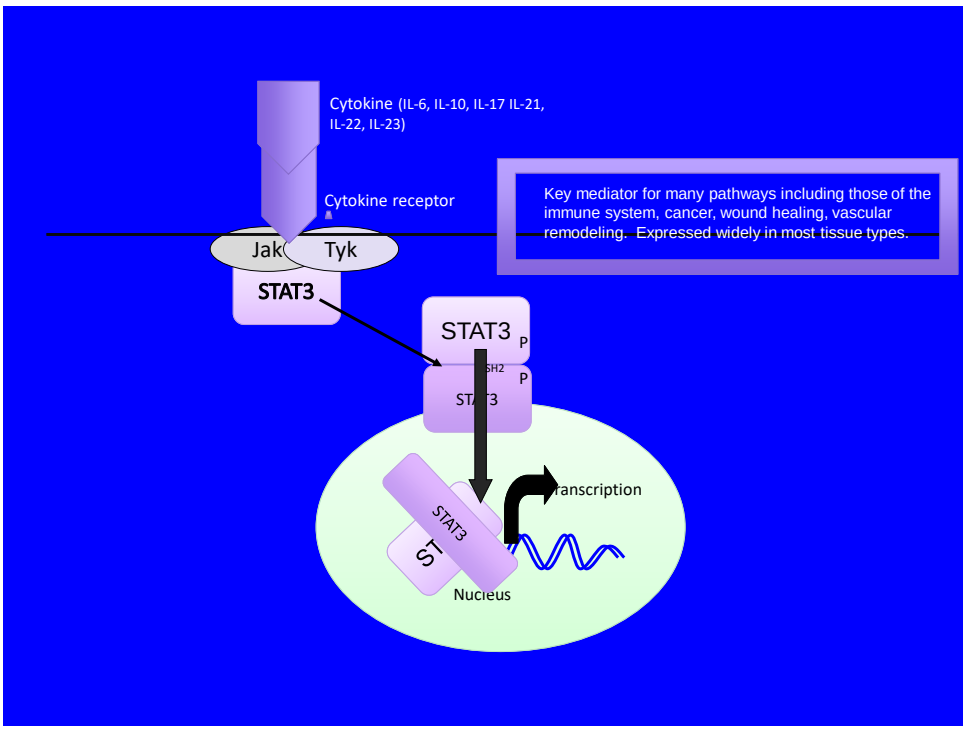
Freeman, M.D., Andrew Demidowich, B.A., Joie Davis, A.P.R.N., Maria L. Turner, M.D., Victoria L. Anderson, C.R.N.P., Dirk N. Darnell, M.A., Pamela A. Welch, B.S.N., Douglas B. Kuhns, Ph.D., David M. Frucht, M.D., Harry L. Malech, M.D., John I. Gallin, M.D., Scott D. Kobayashi, Ph.D., Adeline R. Whitney, B.A., Jovanka M. Voyich, Ph.D., James M. Musser, M.D., Ph.D., Cristina Woellner, M.Sc., Alejandro A. Schäffer, Ph.D., Jennifer M. Puck, M.D., and Bodo Grimbacher, M.D.

Dominant-negative mutations in the DNA-binding domain of STAT3 cause hyper-IgE syndrome

Yoshiyuki Minegishi[1], Masako Saito[1], Shigeru Tsuchiya[2], Ikuya Tsuge[3], Hidetoshi Takada[4], Toshiro Hara[4], Nobuaki Kawamura[5], Tadashi Ariga[5], Srdjan Pasic[6], Oliver Stojkovic[7], Ayse Metin[8] & Hajime Karasuyama[1]

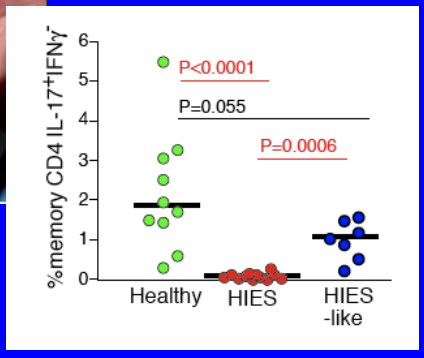
nature 2007

7



8

Epithelial/mucosal infection susceptibility: Lack of Th17 cells

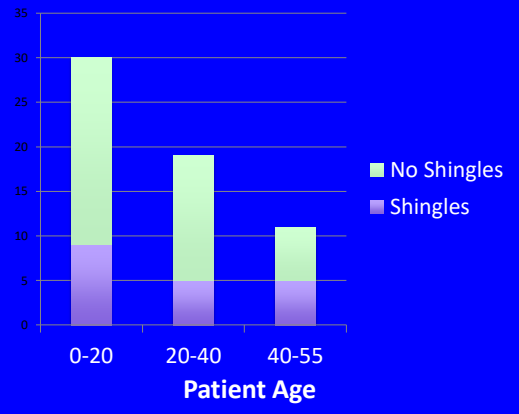


Milner et al, Nature, 2008

9

Decreased memory T and B Cells

Zoster reactivation is increased in HIES patients and occurs at young ages

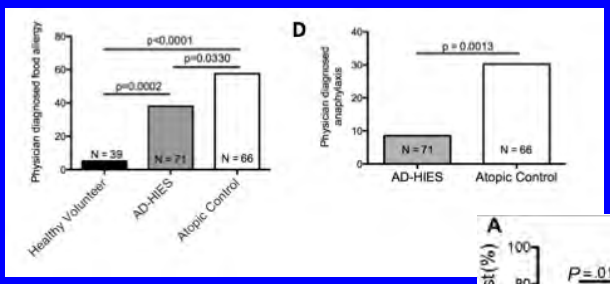


Minimum lifetime prevalence 19/60=31.7%

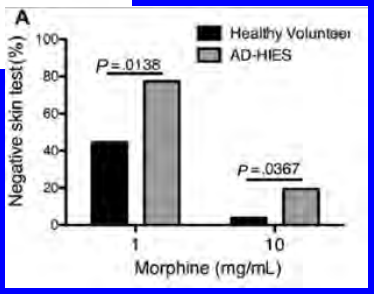
Siegel et al, Immunity 2011

10

AD-HIES with less food allergy and anaphylaxis

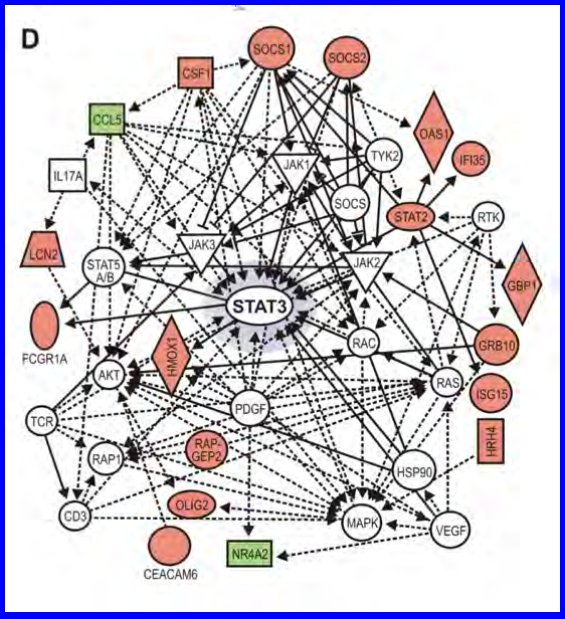


Similar levels of IgE



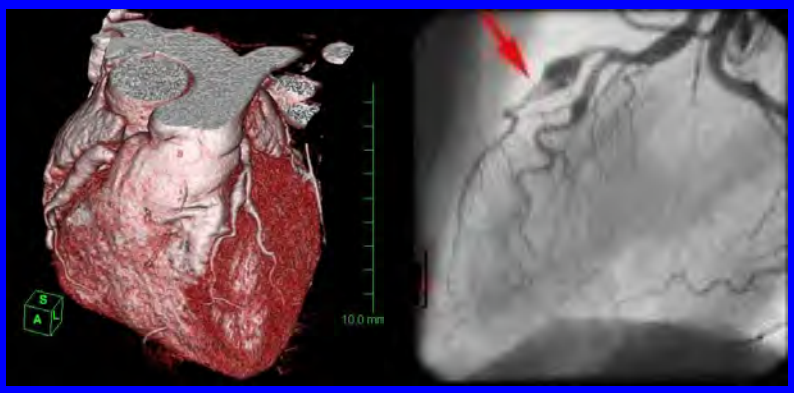
11

STAT3 is expressed widely and involved in many pathways making understanding the diverse clinical features difficult



12

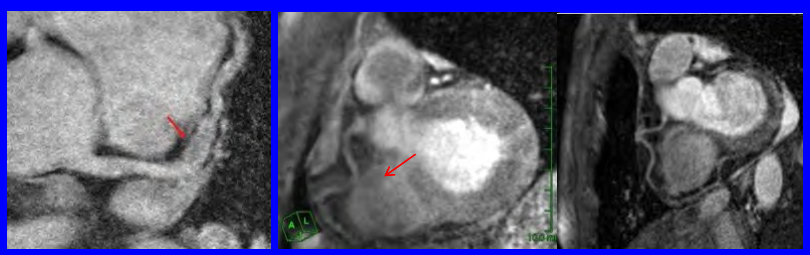
A 43 year old with an MI



Then, 10 years later with a life threatening GI bleed from a mesenteric artery aneurysm
Now, 4 years since GI bleed…..surgery for severe spine disease…

13

Middle sized arterial aneurysm



Left anterior descending artery dilation and aneurysm, and RCA Tortuosity

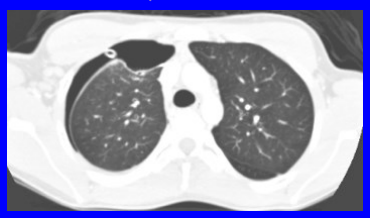
Coronary arteries: myocardial infarction
Cerebral arteries: subarachnoid hemorrhages
Bronchial arteries: massive pulmonary bleeds
Mesenteric arteries: GI bleeds

14

AD-HIES abnormal tissue remodeling

Pneumatocoele with aspergilloma

Bronchopleural fistulae

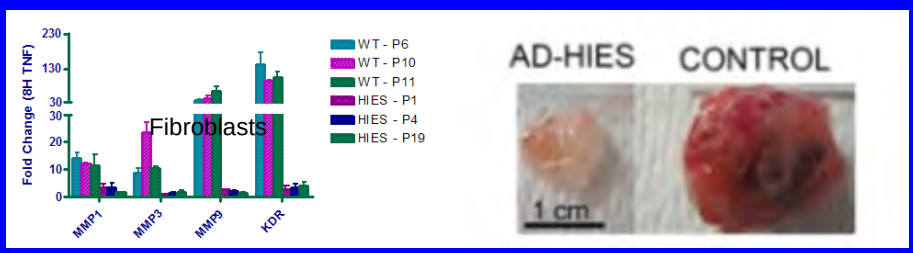


Freeman et al, J of Clin Immunology 2013

15

Disordered Tissue Remodeling

- STAT3 important for angiogenesis and extracellular remodeling



iPSC Teratomas

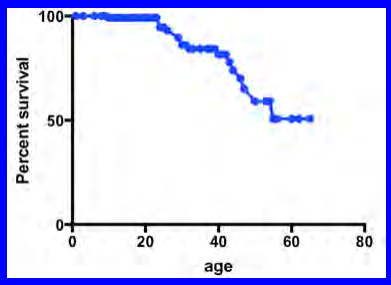
Impaired angiogenesis and extracellular matrix metabolism in autosomal-dominant hyper-IgE syndrome

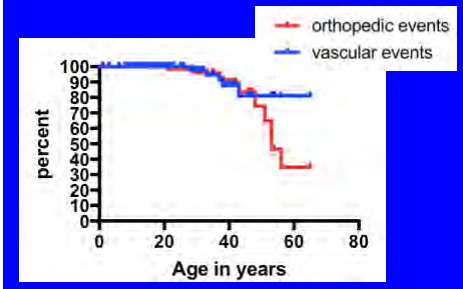
Natalia I. Dmitrieva, … , Guibin Chen, Manfred Boehm

16

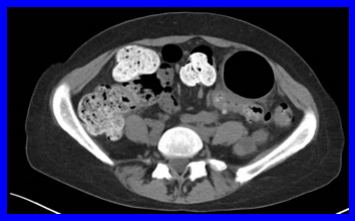
Evolving Prognosis

Overall survival





Early diagnosis changing natural history



Contained GI perforation

17

STAT3 deficient HIES

- Infection susceptibility (Candida, Staph) PLUS connective tissue abnormalities- teeth, bones, joints
- Destructive lung disease
- Less allergy than expected for height of serum IgE

Diagnosis: Sequence STAT3 in setting of infections/connective tissue phenotype

18

Approach to Care

- Supportive with suppressive antimicrobials
  - TMP/SMX typically, antifungals
- Antiseptics (i.e.dilute bleach baths) to control eczema, reduce *S. aureus* colonization
- Consideration of dupilumab for significant eczema
  - James et al, JACI: in practice, 2022. With UPMC!
- Consideration of IgG supplementation- normal IgG levels, poor specific antibody
- Bone and dental health
- Low suspicion of infection

19

What is the role for HSCT?

Bone Marrow Transplantation (2000) 25, 1303–1305

www.nature.com/bmt

Case report

Bone marrow transplantation does not correct the hyper IgE syndrome

AR Gennery, TJ Flood, M Abinun and AJ Cant

Department of Paediatric Immunology, Newcastle General Hospital, Newcastle upon Tyne, UK

J Allergy Clin Immunol. 2010 Aug;126(2):392-4. doi: 10.1016/j.jaci.2010.05.005. Epub 2010 Jul 2.

Successful long-term immunologic reconstitution by allogeneic hematopoietic stem cell transplantation cures patients with autosomal dominant hyper-IgE syndrome.

Goussetis E, Peristeri I, Kitra V, Traeger-Synodinos J, Theodosaki M, Psarra K, Kanariou M, Tzortzatou-Stathopoulou F, Petrakou E, Fylaktou I, Kanavakis E, Graphakos S.

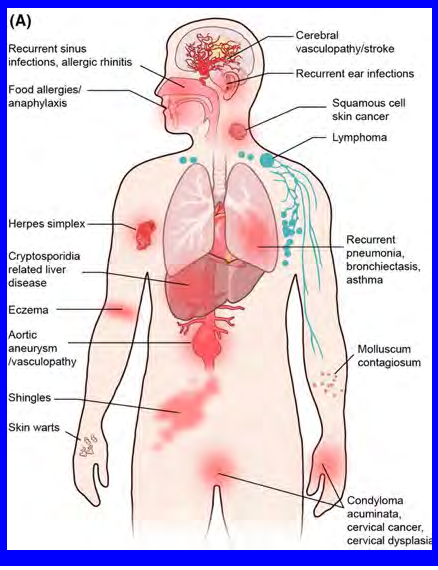
20

What is the role for HSCT?

- Seems to make sense in some cases
  - four patients transplanted at NIH- all at worse end of spectrum
  - About 15-20 patients transplanted worldwide
  - Some good outcomes being reported
    - Worse with mixed chimerism?
- Hard to predict from mutation who will do well and who won't
- But understanding what is driving the different parts of the clinical phenotype is important
  - Will the infection phenotype be improved? Probably
  - Will the bone phenotype be improved? Maybe
  - Will the vascular phenotype be improved? Maybe not
  - Lung healing if there a post- transplant pneumonia? Unknown

21

DOCK8 Deficiency: Formerly known as a "HIES"



Combined B and T cell defect with progressive T lymphopenia over time , and worsening specific antibody function

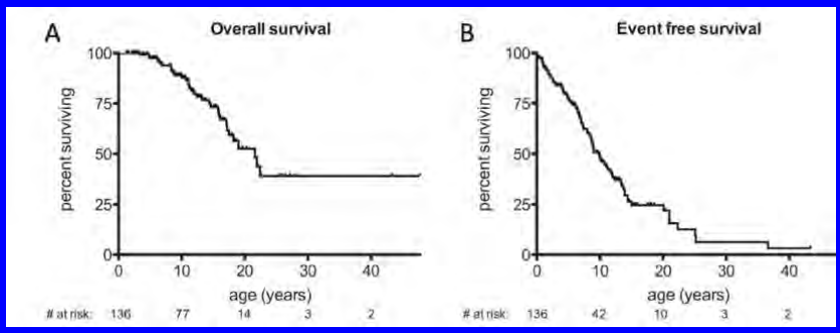
22

DOCK8 Pathogenesis

- DOCK8: involved in actin cell cytoskeleton
- Highly expressed immune system- very low levels in other organs, and not in endothelial cells
- Lymphocytes and dendritic cells have trouble with movement in matrices such as skin (vasculature?) due to abnl cytoskeleton
  - Cytothripsis: Cells fragment in tissues
  - Prevents generation of memory CD8 T cells in the skin

23

High Morbidity and Mortality



136 patients from around the world
Aydin et al, JOCI, 2015

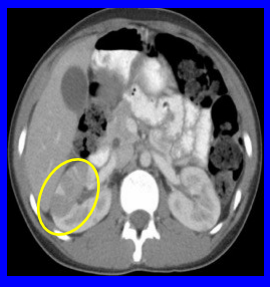
24

Complications with age

15 year old with bronchiectasis

17 year old with persistent HSV

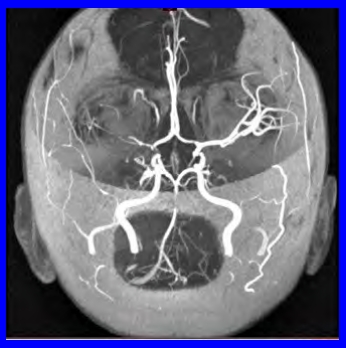
11 year old with cryptosporidia related liver disease, portal hypertension (Liver disease in about 25% of cohort)



15 year old with Burkitt's lymphoma Malignancy in about 25% of cohort

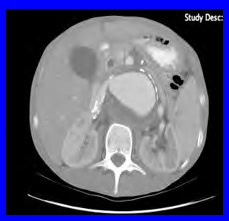
25

Vascular Complications with age: about 15% in our cohort



19 year old with cerebral vasculopathy and stroke

19 year old with bilateral renal artery stenosis



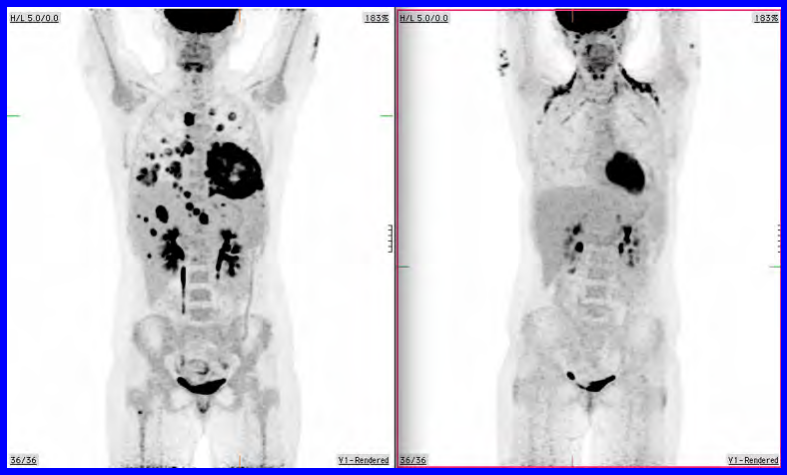
24 year old with large aortic aneurysm

26

Bone marrow transplant for DOCK8 deficiency

27

EBV Driven Lymphoproliferation Improved After Transpla



28

Resolution of eczema: wrapping pre-transplant to improve skin barrier, diminish infection risk

29

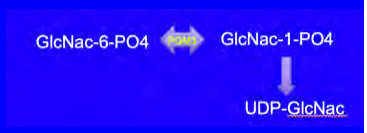
DOCK8 Deficiency

- Variable IgE, eczema, allergies
- Poor control of skin viral control, EBV viremia
- Malignancy risk increases through teen years, young adulthood
- T lymphopenia, poor specific antibodies
- Can be difficult to diagnosis at younger ages
- Genetics- need to look for mutations and deletions

30

Recessive hypomorphic mutations in *PGM3* glycosylation disorder

- Allergy
  - high IgE; atopic dermatitis; asthma; food and environmental allergies; EGID; ABPA
- Infections
  - chronic otitis externa
  - staph and URI/pneumonia
  - lung, cutaneous, parotid, periodontal abscesses
- Autoimmunity
  - increased T_H17; elevated IgG; psoriatic lesions
- Lymphoproliferative disease
  - Evan's syndrome
  - lymphoma
- Neurocognitive impairment
  - developmental delay, ataxia, discoordination and speech abnormalities/dyspraxia
  - febrile seizures



31

Think about PGM3 Deficiency

- Eczema, recurrent bacterial and viral infections
- Developmental delays
- Lymphopenia and neutropenia

TREATMENT

- Supportive
- Consideration of HSCT (maybe 4 known cases?)
  - Partially corrective
- Sugar supplementation?

32

CARD11/14 Defects Causing Hyper IgE Phenotypes

Hypomorphic caspase activation and recruitment domain 11 *(CARD11)* mutations associated with diverse immunologic phenotypes with or without atopic disease

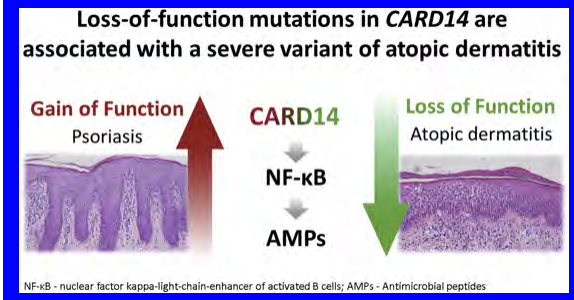
33

CARD11: one gene, multiple phenotypes

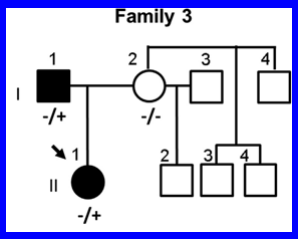
- GOF mutations: B cell lymphoproliferative disease
- Somatic GOF: lymphoma
- Bi-allelic LOF: SCID phenotype
- Hypomorphic heterozygous LOF Mutations- ATOPY!
  - Increased skin viral infections (molluscum), sinopulmonary infections
  - Some with hypogammaglobulinemia, autoimmunity, infrequent lymphoma

34

Dermatologic Conditions with CARD14 mutations



Peled et al, JACI 2018



Severe eczema
Asthma, pneumonias?
Anaphylaxis, food allergy
IgE thousands
Cutaneous infections
Retained primary teeth
Fractures (steroids-osteoporosis?)

35

ERBIN deficiency links STAT3 and TGF-β pathway defects with atopy in humans

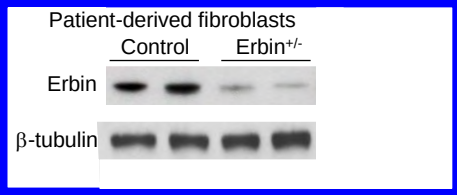
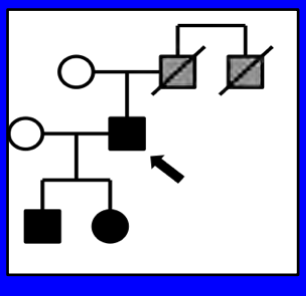
J. Exp. Med. 2017 Vol. 214 No. 3 669–680





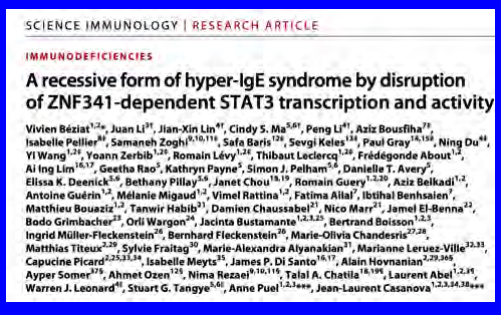
Dilated aortic root
Joint hyper-extensibility
Eosinophilic esophagitis
Mild increase in infections

STAT3 ↓
Erbin ↓
TGFb ↑

36

ZNF341 Deficiency

- Autosomal recessive
- Transcription factor that binds to a STAT3 promoter, thus causes decreased STAT3 transcription when present.
- More inflammatory, less connective tissue phenotype



SCIENCE IMMUNOLOGY | RESEARCH ARTICLE

IMMUNODEFICIENCIES

A recessive form of hyper-IgE syndrome by disruption of ZNF341-dependent STAT3 transcription and activity

Peanut Oral Immunotherapy (OIT)

- Peanut OIT has been demonstrated to increase the threshold of reactivity to peanut protein.
- Early studies desensitized to doses up to 4000 mg[1-3], and recent studies use lower doses, typically 300-2000 mg as a target dose[4-8]
- Double blind placebo controlled food challenge (DBPCFC) is considered the gold standard method to determine OIT treatment effect
- In OIT, end of treatment DBPCFC top cumulative doses of peanut protein are typically ≤ 5-10 grams

Peanut Oral Immunotherapy: "Real-World" Experience

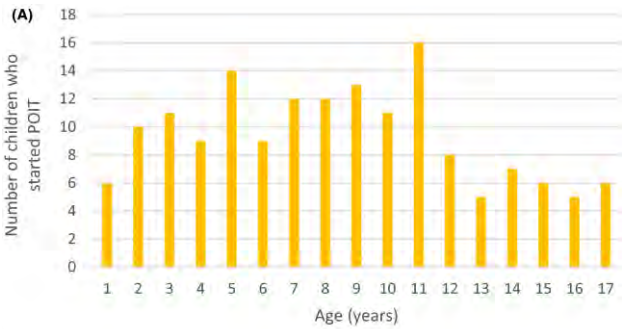
Treatment regimen characteristics	Protocol June 1, 2016
Starting dose	2 µg
Doses to reach the day 1 target	10 doses
Day 1 target dose	2.05 mg
Daily dosing frequency during escalation	Twice a day
Post-dose observation time	45 min
Doses to complete escalation	21 after day 1
Target dose	12 peanuts (3 g protein) then pass 24-peanut challenge
Maintenance dosing frequency	Once a day

~80% reached the target dose

Wasserman RL et al. J Allergy Clin Immunol Pract. 2019 Feb;7(2):418-426.e4.

19

Discontinuation occurs more frequently in older children



80% completed POIT (n=129/160)

Only 3% required Epinephrine during up-dosing

Younger age was associated with completion

Side effects of GI symptoms most common reason for stopping

Comparison and Limitations of Food IT

	Oral Immunotherapy	Sublingual Immunotherapy	Epicutaneous Immunotherapy
Route of Administration	Oral (mouth)	Under the tongue	On the skin
Foods Evaluated	Cow's milk, hen's egg, peanut, tree nuts, fruits, vegetables	Cow's milk, peanut, hazelnut, kiwi	Cow's milk, peanut
Daily Doses (Food Protein)	300–4000 mg	2–7 mg	250 μg
Efficacy *	Large	Small-to-Moderate	Small, but variable
Side Effects	Common: local (oral or gastrointestinal including EoE)	Common: local (oral or pharyngeal)	Common: local (skin)
	Less common: systemic (3-4%)	Rare: systemic	Not yet reported: systemic

*Refers to desensitization effect, not sustained unresponsiveness (SU).

Sara Anvari, Aikaterini.Anagnostou. Children. 2018 Apr 4;5(4).

35

Limitations of Food Allergen IT

- Side effects are common, with GI symptoms being frequent
- Discontinuation occurs in older children compared to younger
- Hyporesponsiveness is achieved, but sustained unresponsiveness has been elusive
- Daily dosing is necessary to maintain response

36

Promise for the Future of Immunotherapy

- OIT with probiotics, herbal formulations and other adjuvants
- Omalizumab and dupilumab as monotherapies or in combination with allergen-specific therapies to improving safety and achieve SU
- OIT for non-peanut, egg and milk allergens and multiple foods
- Identification of best candidates for food allergen IT

Determination of National and Regional Patterns of Pediatric Allergy Using Electronic Health Record Data

Stanislaw J. Gabryszewski, MD, PhD[a], Jesse Dudley, MS[b], Di Shu, PhD[c,d], Robert W. Grundmeier, MD[b], Alexander G. Fiks, MD, MSCE[b], David A. Hill, MD, PhD[a,e]

Affiliations: [a]Division of Allergy and Immunology, Department of Pediatrics, Children's Hospital of Philadelphia, Philadelphia, PA; [b]Center for Pediatric Clinical Effectiveness, Department of Biomedical and Health Informatics, Department of Pediatrics, Children's Hospital of Philadelphia, Philadelphia, PA; [c]Department of Biostatistics, Epidemiology, and Informatics, Perelman School of Medicine at the University of Pennsylvania, Philadelphia, PA; [d]Center for Pediatric Clinical Effectiveness, Department of Pediatrics, Children's Hospital of Philadelphia, Philadelphia, PA; [e]Institute for Immunology, Perelman School of Medicine at the University of Pennsylvania, Philadelphia, PA

Rationale: Analyses of electronic health record (EHR)-based clinical cohorts overcome limitations of survey-based methodologies, such as reporting bias. To date, EHR-based analyses have not been applied to the study of national allergic disease patterns.

Methods: We defined a cohort of 219,397 children aged 0-18 years using the United States (US) multi-state Comparative Effectiveness Research Through Collaborative Electronic Reporting (CER2) EHR database, which spans 27 states. Diagnosis codes and medication prescriptions were used to identify subjects with atopic dermatitis (AD), IgE-mediated food allergy (IgE-FA), asthma, allergic rhinitis (AR), and eosinophilic esophagitis (EoE). We determined cumulative incidence and peak age of incidence, regional variations in cumulative incidence, and the most common food allergens for IgE-FA.

Results: The cumulative incidence (and peak age of incidence) for allergic manifestations were 10.2% (0.3 years) for AD, 4.0% (1.1 years) for IgE-FA, 20.0% (1.1 years) for asthma, 19.7% (2.1 years) for AR, and 0.11% (2.9 years) for EoE. Cumulative incidences varied by geographical region. 13.3% of children had 2 or more allergic conditions, and respiratory allergies (asthma, AR) shared marked comorbidity with each other and with other manifestations. The most common documented food allergens overall were peanut (1.9%), egg (0.8%), and shellfish (0.6%).

Conclusion: Our EHR-based analysis of a multi-state cohort expands on previous regional analyses to detail US pediatric allergy rates on a national scale. Incidence patterns support the classical allergic march sequence and the variable natural histories of food allergies. We detected notably lower rates of IgE-FA and milk allergy as compared with prior studies. The ability to accurate describe trends in pediatric allergic disease patterns is important from the perspectives of clinical medicine, public health, and scientific inquiry.

INSTITUTE OF MEDICINE

Shaping the Future for Health

CROSSING THE QUALITY CHASM:
A NEW HEALTH SYSTEM FOR THE 21ST CENTURY

The U.S. health care delivery system does not provide consistent, high-quality medical care to all people. Americans should be able to count on receiving care that meets their needs and is based on the best scientific knowledge--yet there is strong evidence that this frequently is not the case. Health care harms patients too frequently and routinely fails to deliver its potential benefits. Indeed, between the health care that we now have and the health care that we could have lies not just a gap, but a chasm.

6

What are Healthcare Disparities?

- **Health disparity:** Health difference linked with economic, social and environmental disadvantage
  - Adversely affects groups that have systematically experienced greater social or economic obstacles to health based on their race, ethnicity, religion, SES status, gender, age, disability, sexual orientation, and/or geographic location

- **Health Equity:** Principle underlying the commitment to reduce disparity and its determinants

12

Disparities in Prevalence of Food Allergy

Self-report of food allergy among US children has sharply increased in the past 2 decades with the greatest increase among non-Hispanic black children

Retrospective cohort study of children compared with non-Hispanic white children:

- African American children had
  - more asthma and eczema (P < .01)
  - significantly higher odds of allergy to wheat, soy, corn, fish, and shellfish (P < .01)
- Hispanic children had
  - significantly higher odds of allergy to corn, fish, and shellfish (P < .01)
  - Hispanic children higher odds of eczema (P < .01)

Male	7.5 (7.0-7.9)	<.001	3.0 (2.7-3.3)	<.001
Female	13.8 (13.3-14.4)		7.2 (6.8-7.7)	

Gupta RS, Warren CM, Smith BM, Jiang J, Blumenstock JA, Davis MM, et al. JAMA Netw Open 2019; 2:e185630.

15

Caregiver reported FA significantly lower among children in household incomes <$50 000 vs ≥$50 000

TABLE 4 Multiple Logistic Regression Models: Adjusted Odds of Food Allergy, Diagnosis of Food Allergy, and Severe Food Allergy

Variable	Food Allergy vs No Food Allergy	Confirmed vs Convincing Food Allergy	Severe vs Mild-to-Moderate Food Allergy
Race/ethnicity vs white, non-Hispanic			
Asian, non-Hispanic	1.4 (1.2–1.7)	0.7 (0.4–0.9)	0.7 (0.4–1.0)
Black, non-Hispanic	1.8 (1.6–2.1)	0.8 (0.6–1.0)	1.1 (0.8–1.4)
Hispanic	0.9 (0.8–1.1)	0.8 (0.6–1.0)	0.9 (0.7–1.2)
Multiple/other, non-Hispanic	1.1 (0.9–1.4)	1.2 (0.8–1.8)	1.1 (0.7–1.7)
Gender			
Male vs female	0.9 (0.9–1.1)	1.1 (0.9–1.3)	1.3 (1.0–1.5)
Age vs 0–2 y			
3–5	1.5 (1.3–1.8)	1.4 (1.0–1.9)	1.6 (1.1–2.4)
6–10	1.2 (1.1–1.4)	1.2 (0.9–1.)	1.6 (1.2–2.3)
11–13	1.3 (1.1–1.5)	1.1 (0.8–1.6)	1.9 (1.4–2.8)
14–17	1.4 (1.2–1.6)	1.2 (0.9–1.7)	2.1 (1.5–3.0)
Household income, $			
<50 000 vs ≥50 000	0.5 (0.4–0.7)	0.5 (0.4–0.6)	0.8 (0.6–0.9)
Geographic region vs Midwest			
Northeast	1.3 (1.2–1.5)	1.3 (1.0–1.7)	1.1 (0.9–1.5)
South	1.5 (1.3–1.7)	1.1 (0.9–1.4)	1.1 (0.8–1.4)
West	1.3 (1.1–1.5)	1.0 (0.7–1.3)	1.0 (0.7–1.3)
Report of multiple food allergies			
Yes vs no	—	3.1 (2.6–3.8)	3.2 (2.7–4.0)

Each estimate is adjusted for all variables listed in the table.

[‡] Division of Allergy and Immunology, Department of Internal Medicine, Henry Ford Hospital, Detroit, Michigan
[§] Division of Allergy and Immunology, Department of Pediatrics, Georgia Regents University, Augusta, Georgia
[¶] School of Nursing, University of Michigan, Ann Arbor, Michigan

- Wayne County Health, Environment, Allergy, and Asthma Longitudinal Study (590 infants)
- Sensitization (serum specific IgE >0.35 IU/mL) to the food allergens was significantly higher for African American children compared with non-African American children
- A higher proportion of African American children were designated as having peanut allergy
  - % African American children with sIgE level >95% predictive decision points for peanut was 1.7% vs 0.5% for non-African American children.
- After logistic regression, race/ethnicity was associated with sensitization to >1 of the food allergens (aOR, 1.80; 95% CI, 1.22-2.65; P = .003).

17

The prevalence and characteristics of food allergy in urban minority children

Sarah Taylor-Black, MD; and Julie Wang, MD

The Elliot and Roslyn Jaffe Food Allergy Institute, Division of Allergy and Immunology, Department of Pediatrics, Mount Sinai School of Medicine, New York, New York

Ann Allergy Asthma Immunol 109 (2012) 431–437

- A retrospective review of EMR from children seen in the hospital-based general pediatric clinic at Mount Sinai Hospital serving East Harlem, NY, between July 1, 2008 and July 1, 2010
- Of 9,184 children seen in this low-income, minority clinic, 3.4% (313) had a physician-documented food allergy
- Significantly more black children (4.7%) were affected than children of other races (2.7%, P < .0001)

20

FORWARD (Food allergy Outcomes Related to White and African-American Racial Differences)

- Objective was to compare clinical and psychosocial outcomes, phenotypes and endotypes, and management practices among a large, socioeconomically and geographically diverse sample of food allergic African American and White children.
- African Americans had higher adjusted odds of allergy to finfish (OR: 2.54, P < .01) and shellfish (OR: 3.10, P < .001) than Whites.
- African Americans also had higher adjusted odds of asthma than Whites (asthma prevalence of 60.5% in African Americans and 27.2% in Whites; OR: 2.70, P < .001).
- In addition, shellfish allergy was associated with asthma, after controlling for race.

Mahdavinia M…Gupta RS. J Allergy Clin Immunol Pract. 2021 Jul;9(7):2867-2873.e1.
Davis CM. J Allergy Clin Immunol Pract. 2021 Jul;9(7):2874-2875.

21

Disparities in Food Allergy Management

Texas Children's Hospital
BCM Baylor College of Medicine

22

FA Physician Documentation, Testing, and Anticipatory Guidance is Lower in Minority Patients

- In low income, urban minority patients with a physician-documented food allergy, fewer than half had confirmatory testing or evaluation by an allergy specialist.
- Although most had epinephrine autoinjectors prescribed, most were not given food allergy action plans.
  - Significantly more blacks were affected than children of other races.
- Black and Hispanics have higher rates of FA-related anaphylaxis and emergency department visits (P < .01).

Taylor-Black S et al. Ann Allergy Asthma Immunol. 2012;109(6):431-7
Bilaver LA et al. Pediatrics. 2016;137(5)
Mahdavinia M et al. JACI in Practice, 2017;5(2):352-357.e1.

Texas Children's Hospital
BCM Baylor College of Medicine

23

Food Allergy Diagnosis and Follow Up

- Formal food allergy diagnosis is lower among black children despite higher sensitization rates and higher odds of reported severe reactions due to food allergy
- Black and Hispanic children have a shorter duration of follow-up for FA with an allergy specialist (~ 2 years vs. 3 years in White children)

Greenhawt, et al. J Allergy Clin Immunol: In Practice. 2013;1:378-86
Mahdavinia M et al. J Allergy Clin Immunol: In Practice. 2017

BCM Baylor College of Medicine

25

Disparities in Food Allergy Parental Knowledge

- Black, Hispanic, and Asian parents were:
  - Less likely to correctly identify signs of a FA reaction
  - Less likely to identify triggers
  - More likely to recognize the need to avoid food allergens

Characteristic	Able to identify 2 signs of a milk allergy reaction	Able to identify 3 triggers of food allergy	Recognize necessity of allergenic food avoidance	Aware that daily medicine cannot treat food allergy
Aged ≥65 y	0.81 (0.69–0.96)[b]	0.72 (0.52–0.99)[b]	1.28 (1.14–1.43)[b]	1.16 (0.95–1.42)
Female sex	1.26 (1.14–1.39)[b]	1.02 (0.86–1.22)	1.07 (0.99–1.16)	1.14 (1.00–1.31)[b]
Race				
Black	0.83 (0.73–0.95)[b]	0.64 (0.48–0.84)[b]	1.13 (1.02–1.25)[b]	1.02 (0.85–1.22)
Hispanic	0.80 (0.71–0.91)[b]	0.68 (0.53–0.89)[b]	1.15 (1.04–1.26)[b]	1.01 (0.85–1.21)
Asian	0.84 (0.72–0.97)[b]	0.97 (0.76–1.25)	1.06 (0.94–1.20)	1.04 (0.86–1.26)
College graduate	0.96 (0.86–1.07)	1.05 (0.86–1.28)	0.99 (0.90–1.09)	1.23 (1.06–1.42)[b]
Annual income <$75,000	1.03 (0.94–1.12)	0.86 (0.72–1.02)	1.09 (1.00–1.18)	0.92 (0.81–1.05)
Parent of child <18 y	1.03 (0.94–1.13)	1.01 (0.85–1.21)	1.11 (1.02–1.20)[b]	1.07 (0.93–1.23)
Prior training in food allergy	1.12 (1.00–1.25)[b]	1.42 (1.15–1.74)[b]	1.04 (0.93–1.15)	1.11 (0.94–1.31)
Food-allergic acquaintance	1.22 (1.11–1.35)[b]	1.03 (0.86–1.30)	0.93 (0.86–1.01)	1.03 (0.90–1.18)

[a] Data are given as relative risk ratio (95% confidence interval).

26

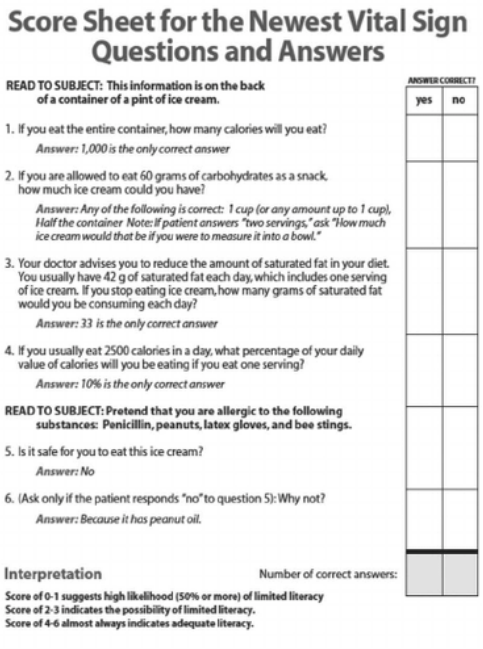
Health Literacy and Food Allergy Management Knowledge

- Health literacy was assessed using the Newest Vital Sign (NVS), a validated index consisting of 6 questions regarding an individual's ability to read an ice cream label
- Higher scores = better health literacy

Nutrition Facts	
Serving Size	½ cup
Servings per container	4
Amount per serving	
Calories 250	Fat Cal 120
	%DV
Total Fat 13g	20%
Sat Fat 9g	40%
Cholesterol 28mg	12%
Sodium 55mg	2%
Total Carbohydrate 30g	12%
Dietary Fiber 2g	
Sugars 23g	
Protein 4g	8%

*Percentage Daily Values (DV) are based on a 2,000 calorie diet. Your daily values may be higher or lower depending on your calorie needs.

Ingredients: Cream, Skim Milk, Liquid Sugar, Water, Egg Yolks, Brown Sugar, Milkfat, Peanut Oil, Sugar, Butter, Salt, Carrageenan, Vanilla Extract.



Score Sheet for the Newest Vital Sign Questions and Answers

	ANSWER CORRECT? yes	no
READ TO SUBJECT: This information is on the back of a container of a pint of ice cream.		
1. If you eat the entire container, how many calories will you eat? *Answer: 1,000 is the only correct answer*		
2. If you are allowed to eat 60 grams of carbohydrates as a snack, how much ice cream could you have? *Answer: Any of the following is correct: 1 cup (or any amount up to 1 cup), Half the container Note: If patient answers "two servings," ask "How much ice cream would that be if you were to measure it into a bowl."*		
3. Your doctor advises you to reduce the amount of saturated fat in your diet. You usually have 42 g of saturated fat each day, which includes one serving of ice cream. If you stop eating ice cream, how many grams of saturated fat would you be consuming each day? *Answer: 33 is the only correct answer*		
4. If you usually eat 2500 calories in a day, what percentage of your daily value of calories will you be eating if you eat one serving? *Answer: 10% is the only correct answer*		
READ TO SUBJECT: Pretend that you are allergic to the following substances: Penicillin, peanuts, latex gloves, and bee stings.		
5. Is it safe for you to eat this ice cream? *Answer: No*		
6. (Ask only if the patient responds "no" to question 5): Why not? *Answer: Because it has peanut oil.*		
Interpretation Number of correct answers:		

Score of 0-1 suggests high likelihood (50% or more) of limited literacy
Score of 2-3 indicates the possibility of limited literacy.
Score of 4-6 almost always indicates adequate literacy.

Egan M, Yin HS, Greenhawt M, Wang J. J Allergy Clin Immunol Pract. 2019 Feb;7(2):655-658.

27

Lower health literacy in caregivers is associated with deficiencies in management

Outcome assessed	Health literacy association
Demonstrated correct use of EA (caregiver), mean ± SD	- Every 1-point increase in the EA score was associated with a 0.3 increase in the NVS score ($P = .002$)
Unexpired EA present at visit*	- Device being present was associated with a 1.5-point increase in the NVS score ($P = .001$)
Food allergy reaction rates (no. of events in the past 12 mo), mean ± SD	- The NVS score decreased by 0.46 for every additional allergic reaction ($P = .002$)
History of anaphylaxis	- Those with a higher NVS score were less likely to have a history of anaphylaxis (OR, 0.76; 95% CI, 0.61-0.94)
Health care utilization (no. of events in the past 12 mo), median (IQR)	- No association with calls to pediatrician - No association with ED visits - For every additional allergy call, the NVS score increased by 0.46 ($P = .002$)
Clinical vignette: Treatment of mild hives† (participants able to select multiple answers)	- The mean NVS score was lower among patients reporting taking child to the ED ($P = .003$) or calling 911 for hives ($P = .008$)
Clinical vignette: Treatment of anaphylaxis‡ (participants able to select multiple answers)	- The NVS score was lower in patients who would take child to the ED for anaphylaxis ($P = .05$)

1) Demonstrating correct use of an epinephrine autoinjector
2) Increased reactions to foods in the past 12 months
3) Knowledge gaps on treatment of allergic reactions.

Egan M, Yin HS, Greenhawt M, Wang J. J Allergy Clin Immunol Pract. 2019 Feb;7(2):655-658.

Texas Children's Hospital
BCM Baylor College of Medicine

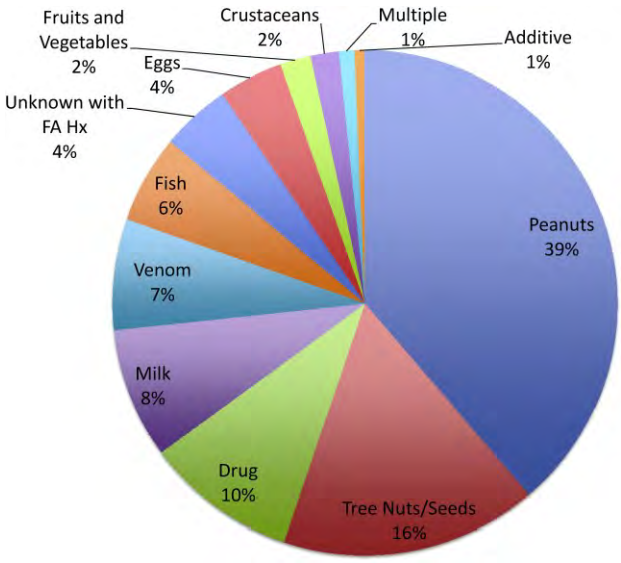
28

Disparities in Food Allergy Reaction Preparedness

29

Food-Induced PICU Anaphylaxis

Children in 131 North American (US and Canada) PICUs prospectively enrolled in the Virtual Pediatric Systems database from 2010 to 2015



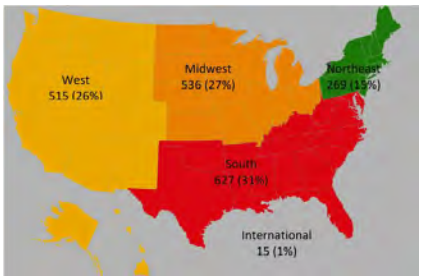
Ramsey NB, Guffey D, Anagnostou K, Coleman NE, Davis CM. J Allergy Clin Immunol Pract. 2019 Sep-Oct;7(7):2241-2249.

30

Population Specific Triggers

- There were differences among children with different race/ethnicities ($P < .001$)
  - In Black children, fish (60%) and shellfish (67%) were the most common triggers
  - In White children, tree nuts (59%) and milk (64%)
  - In Asian children, eggs (10%) and tree nuts/seeds (9%)
  - In Hispanic children, crustaceans (22%), eggs (20%), and fish (20%).

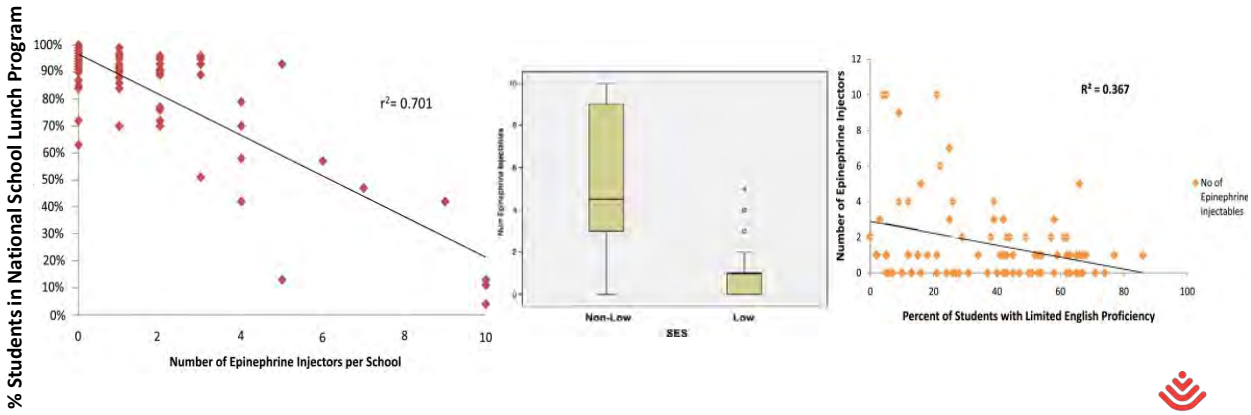
- There were also significant differences among children in different US regions ($P = .044$).
  - In Midwestern children, milk (46%) or shellfish (45%) were the most common triggers
  - In Northeastern children, eggs (25%) and milk (22%)
  - In Southern children, shellfish (45%)
  - In Western children, tree nuts/seeds (30%) or peanuts (31%).



31

Disparities in Emergency Preparedness

- Epinephrine has shown to be less available in schools when needed in low income, low English proficiency and rural populations.



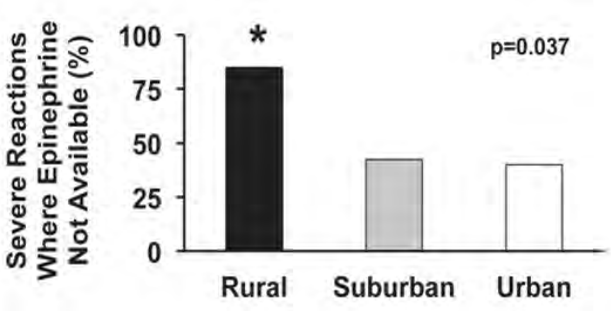
Shah SS et al. J Allergy Clin Immunol Pract. 2014;2:288-93.e1.

Texas Children's Hospital

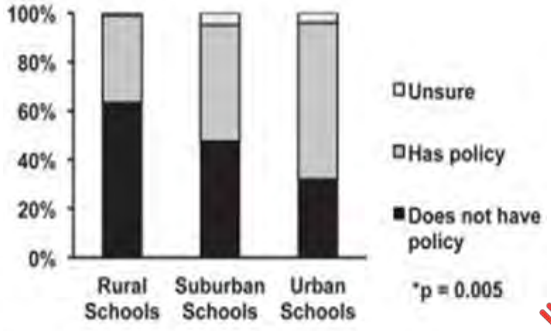
BCM Baylor College of Medicine

32

Rural communities reported less epinephrine availability than urban and suburban communities



Nurses from rural schools were least likely to report a policy for undesignated epinephrine



Szychlinski C et al. J Allergy Clin Immunol Pract. 2015;3(5):805-7.e8.

Texas Children's Hospital
BCM Baylor College of Medicine

33

Socioeconomic Variables Impacting Food Allergy

Texas Children's Hospital
BCM Baylor College of Medicine

34

Socioeconomic Disparities in the Economic Impact of Childhood Food Allergy

Lucy A. Bilaver, PhD,[a] Kristen M. Kester, MD, MPH,[b] Bridget M. Smith, PhD,[c,d,e] Ruchi S. Gupta, MD, MPH[c,d]

- Cross-sectional survey data (November 2011 and January 2012) from 1,643 US caregivers with a food-allergic child.
- 2-part regression model to estimate mean costs and identified differences by levels of household income and race or ethnicity.
- Children in the lowest income stratum incurred 2.5 times the amount of emergency department and hospitalization costs as a result of their food allergy than higher-income children.
- Costs incurred for specialist visits were lower in the lowest income group ($228) compared with the highest income group ($311; P < .01) as was spending on out-of-pocket medication costs ($117, lowest income; $366, highest income; P < .001).
- Conclusion: Affordable access to specialty care, medications, and allergen-free foods are critical to keep all food-allergic children safe, regardless of income and race.

Bilaver LA, Kester KM, Smith BM, Gupta RS. Pediatrics. 2016 May;137(5):e20153678.

Bilaver LA, Kester KM, Smith BM, Gupta RS. Pediatrics. 2016 May;137(5):e20153678.

36

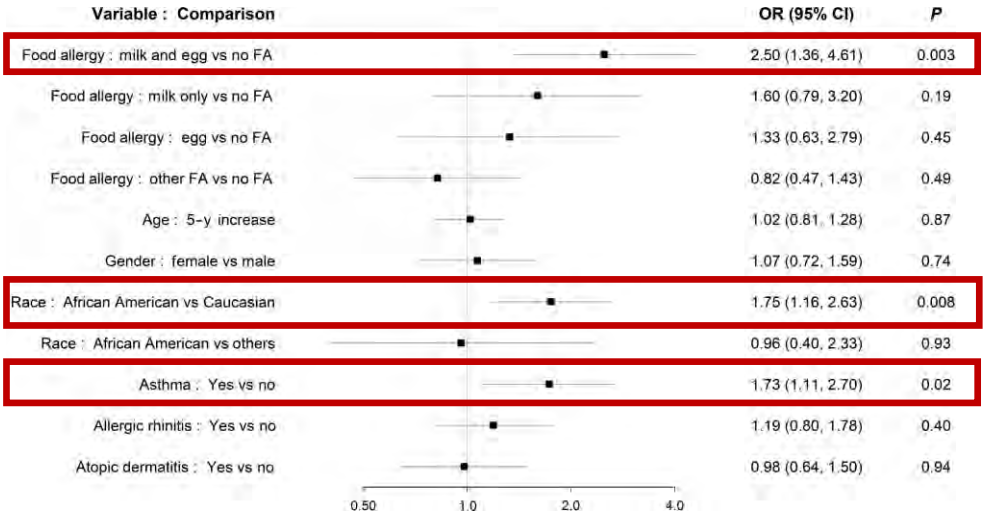
Food allergy-related bullying and associated peer dynamics among Black and White children

- FORWARD - prospective multicenter cohort study, initiated to evaluate racial differences in the natural history of food allergy among Black and White children.
- No significant racial differences in FA-related bullying prevalence were identified overall (20.0% of White vs 15.6% of Black; *P* = .50)
- In those ≥11 years old, the rates were higher among White (44.8% vs 18.2% of Black), *P* = .046
- In contrast, bullying unrelated to FA was higher among Black (38.6%), vs. White children (17.7%), *P* = .002

Brown D…Warren C. Ann Allergy Asthma Immunol. 2021 Mar;126(3):255-263.e1.

37

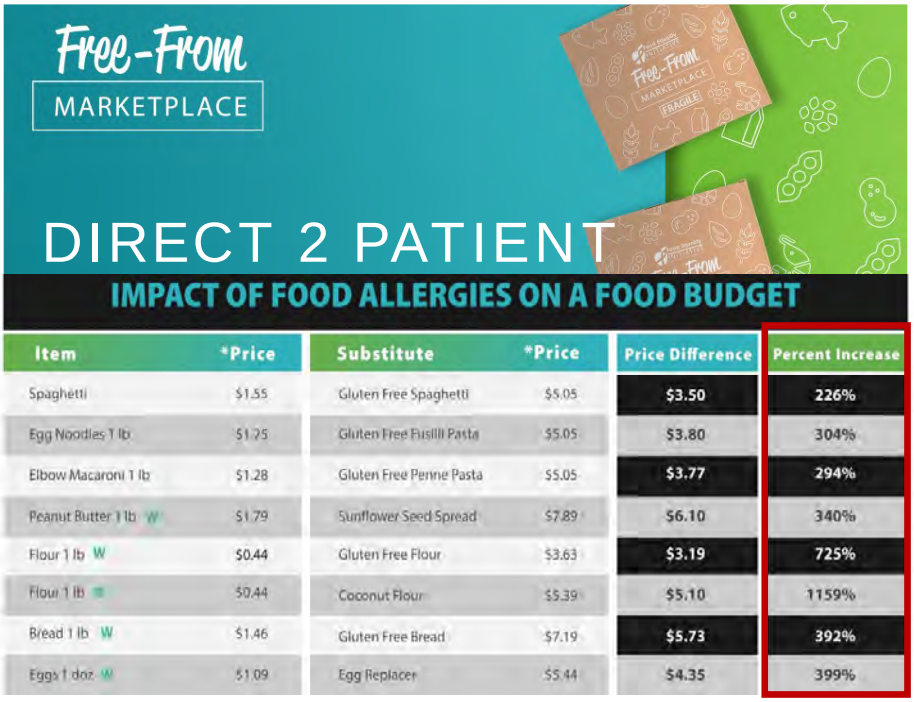
Food Insecurity Risk Factors



Food insecurity is associated with poorer quality of life.

Dilley MA et al. Pediatr Allergy Immunol. 2019 May;30(3):363-369.

38



Item	*Price	Substitute	*Price	Price Difference	Percent Increase
Spaghetti	$1.55	Gluten Free Spaghetti	$5.05	$3.50	226%
Egg Noodles 1 lb	$1.25	Gluten Free Fusilli Pasta	$5.05	$3.80	304%
Elbow Macaroni 1 lb	$1.28	Gluten Free Penne Pasta	$5.05	$3.77	294%

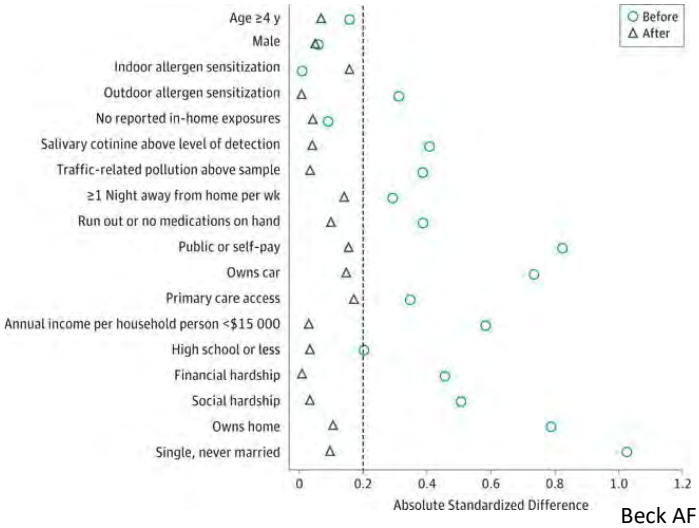
40

Asthma readmission disparity explained after statistically balancing SES variables

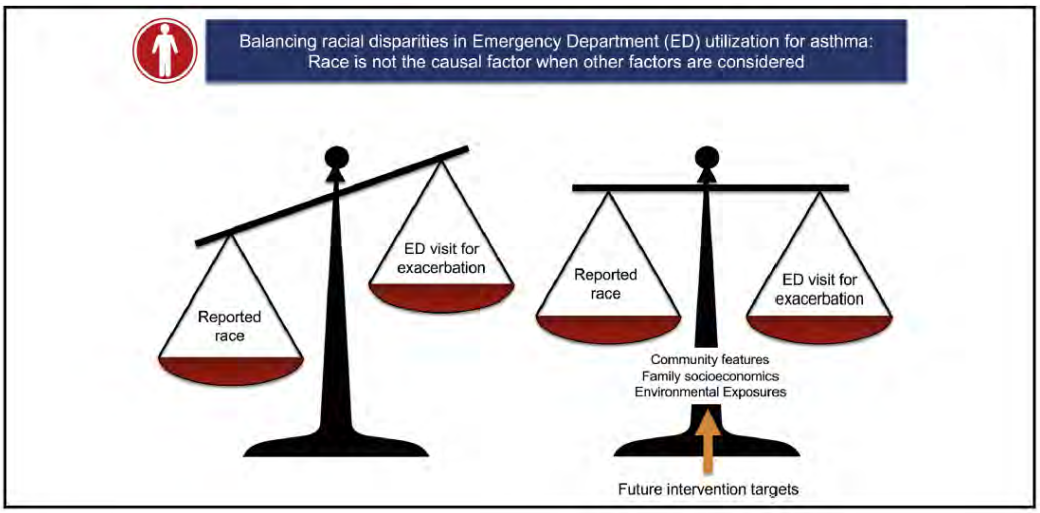


Socioeconomic hardship variables explained 53% of the observed disparity

Beck AF et al. JAMA Pediatr. 2016 Jul 1;170(7):695-703.

41

Racial disparities in asthma-related ED use are evident between black and white patients with asthma but can be eliminated when socioeconomic and environmental variables are equally balanced between groups.



Fitzpatrick et al. JACI 2019

42

Social Determinants of Health

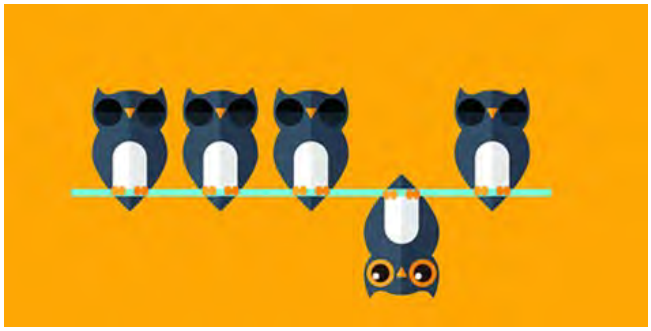
Davis et al. JACI. 2021.

Texas Children's Hospital
BCM Baylor College of Medicine

43

Implicit Bias is……

- A bias that results from the tendency to process information based on ***unconscious associations and feelings***, even when these are contrary to one's conscious or declared beliefs

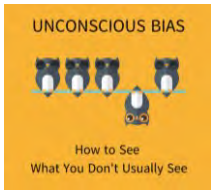


The bias blind spot is the cognitive bias of recognizing the impact of biases on the judgment of others, while failing to see the impact of biases on one's own judgment.

Texas Children's Hospital
BCM Baylor College of Medicine

We're Not Bad, We're Human.

44



Healthcare Quality and Implicit (Unconscious) Bias

- **Healthcare professionals have implicit biases - No one is immune.**
  - We resist the unfamiliar, and our processes can reflect or reinforce bias.
  - Studies show a significant positive correlation between level of implicit bias and lower quality of health care.

- **Implicit bias affects clinical judgement and behavior**
  - Bias is evident either in the diagnosis, the treatment recommendations, the number of questions asked of the patient, the number of tests ordered, or other responses.

- **There are specific determinants of bias**
  - Socio-demographic characteristics of physicians and nurses (e.g. gender, race, type of healthcare setting, years of experience, country where medical training received) are correlated with level of bias.

Texas Children's Hospital
BCM Baylor College of Medicine

FitzGerald C, Hurst S. Implicit bias in healthcare professionals: a systematic review. BMC Med Ethics. 2017 Mar 1;18(1):19. https://www.boyden.com/media/checking-your-blind-spot-ways-to-find-and-fix-unconscious-bias-7627148/index.htm

45

What You Can Do

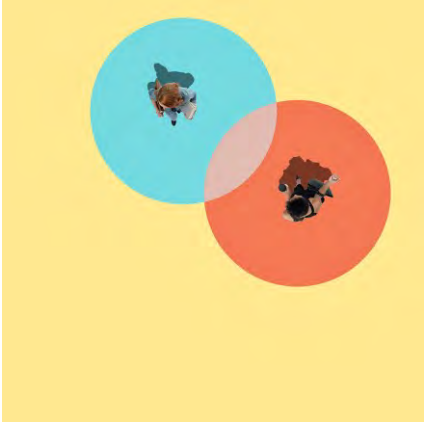
Texas Children's Hospital
BCM Baylor College of Medicine

46

What Can You Do to Minimize Your Implicit Bias?

Project Implicit®
Harvard Implicit Association Test - Harvard University
implicit.harvard.edu

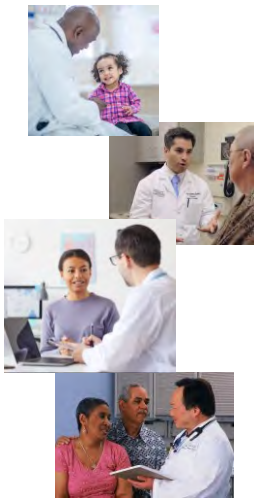
- **Introspection:** Explore and identify your own prejudices
- **Mindfulness:** Since you're more likely to give in to your biases when you're under pressure, practice ways to reduce stress
- **Perspective-taking:** Consider experiences from the point of view of the other person
- **Learn to slow down:** Before interacting with people from certain groups, pause and reflect to reduce reflexive actions
- **Individuation:** Evaluate people based on their personal characteristics rather than those affiliated with their group



"You can't eliminate bias but you can 'learn how to dance with it' to minimize its effect." Howard Ross

47

Strategies to Help Reduce Food Allergy Health Disparities



- Require medical provider training with cross-cultural education to reduce implicit/unconscious bias.
- Recruit and hire diverse patient-facing faculty and staff, who can help educate non-English speaking patients or patients with low health literacy.
- Identify systemic and other barriers to care for underserved populations in your practice/institution and develop strategies to address them.

Texas Children's Hospital
BCM Baylor College of Medicine

Ali A et al. Can Respir J. 2019: 5165189. Apter AJ et al. J Allergy Clin Immunol. 2019;144(3):846-853.e11.
George M et al. J Adv Nurs. 2019;75(4):876-887. Delaigue S et al. Frontiers in Public Health 2014; 2: 1-9.

48

Strategies to Help Reduce Food Allergy Health Disparities

- Implement more culturally sensitive patient education efforts and collaborative patient-clinician decision-making processes.
- Improve access to specialty care in underserved communities.
  - Develop relationships with community primary care physicians and other healthcare providers or organizations
  - Commit resources to have a proportion of patients in a practice who have public insurance
- Increase research studies addressing diagnosis, management and outcomes for underserved populations.

Texas Children's Hospital
BCM Baylor College of Medicine

Ali A et al. Can Respir J. 2019: 5165189. Apter AJ et al. J Allergy Clin Immunol. 2019;144(3):846-853.e11.
George M et al. J Adv Nurs. 2019;75(4):876-887. Delaigue S et al. Frontiers in Public Health 2014; 2: 1-9.

49

Strategies to Help Reduce Food Allergy Health Disparities

- Screen for social determinants of health (SDOH) with a non-biased approach and address in office visits.
  - https://www.aafp.org/journals/fpm/blogs/inpractice/entry/social_determinants.html
- Give patient education about SDOH and provide clinical care resources to address them
  - Social service resources like auntbertha (www.findhelp.org) and 211 (www.211.org)
  - Dietary resources like Food Equality Initiative
- Join and advocate through medical societies and lay organizations for policy change in insurance coverage for underserved communities.
- Engage trainees from minority communities for training and mentoring opportunities.

51

Conclusions

- Health disparities are significant in populations with food allergies.
- Socioeconomic factors and other social determinants of health contribute to these disparities.
- Health disparities include increased risks for anaphylaxis and ER visits and lack of access to subspecialty care.
- Understanding the key features to recognize the presentation and concerns of patients from underserved communities with food allergies can target early, specific and meaningful prevention strategies and interventions.

PENNSYLVANIA ALLERGY & ASTHMA ASSOCIATION

73RD PAAA ANNUAL MEETING

Annual Business Meeting

Saturday, June 25, 2022

9:45 a.m. – 10:15 a.m.

PAAA

Pennsylvania Allergy & Asthma Association

1

AGENDA

A. Call to Order (*Sigrid DaVeiga, MD*)

B. Approval of Minutes of June 26, 2021, Annual Business Meeting (*Sigrid DaVeiga, MD*)

C. President's Report (*Sigrid DaVeiga, MD*)

D. Treasurer's Report/Finance Committee (*Gisoo Ghaffari, MD*)

E. Committee/Representative Reports
1) Membership (*Janet Beausoleil*)
2) Nominating (*Allyson Larkin, MD*)
3) PAERF (*Sarah Henrickson, MD*)

F. New/Old Business (Sigrid DaVeiga, MD)
1) Bylaws Amendment – DEI Standing Committee

G. Recognition of Long-Standing Attendees (Janet Beausoleil, MD)

H. Recognition of Outgoing President and Remarks (Sigrid DaVeiga, MD and Janet Beausoleil, MD)

I. Remarks of Incoming President's Remarks *(Robert Zemble, MD)*

J. Adjournment

PAAA
Pennsylvania Allergy & Asthma Association

2

APPROVAL OF THE MINUTES
June 26, 2021

- **I. Call to Order** – Dr. Allyson Larkin, PAAA President, called the meeting to order at 10:00 am.

- **II. Approval of Minutes of June 27, 2020, Annual Business Meeting** – On a motion made and seconded, those present voted unanimously via a Zoom Poll to approve the minutes of the 2020 Annual Business Meeting.

- **III. President's Report** – Dr. Larkin thanked everyone for coming to the virtual annual business meeting. Dr. Larkin expressed her appreciation and thanks to Planning Committee, recognized the excellent programming and speakers the committee had assembled for this year's annual meeting, and stated that she looked forward to meeting in person next year.

3

- **IV. Treasurer's Report/Finance Committee** – Dr. Robert Zemble reported on the financial statement as of December 2020. He commented on PAAA's total assets and total liabilities. On a motion made and seconded, those present voted unanimously via a Zoom Poll to accept the financial statement.

- **V. Report of the Membership Committee** – Dr. Janet Beausoleil reported on the membership statistics. She reported that PAAA gained one new member and three new fellows in training over the last year. The current membership stands at 177 dues-paying members. The Board has agreed to conduct an outreach drive to recoup these nonrenewing members.

- **VI. Report of the Nominating Committee** - In the absence of Dr. Fisher, Dr. Larkin presented the Nominating Committee slate and called for any nominations from the floor. Hearing none, on a motion made and seconded, those present voted unanimously via a Zoom Poll to accept the slate as presented.

4

- **VII. PAERF** – Dr. Sarah Henrickson reviewed the financial report as of May 31, 2021, the PAERF list of donors, PAERF Research Grant recipients for 2021, winning abstract and digital poster presenters and the PAERF mentee/mentor program for 2021.

- **VIII. Recognition of Long-Standing Attendees -** PAAA Historian Janet Beausoleil recognized Drs. Effat Mahmoud and Mary Fontana-Penn.

- **IX. New/Old Business** – There was no new or old business.

- **X. President Awards** - Dr. Janet Beausoleil thanked Dr. Larkin for her outstanding leadership as PAAA president and presented the president's award virtually.

5

- **XI. Passing of the Gavel** – Dr. Larkin passed the mantle of leadership to Dr. Sigrid DaVeiga and expressed complete confidence in her ability to lead PAAA going forward.

- **XII. Remarks of Incoming President** – Dr. DaVeiga thanked Dr. Larkin for her leadership.

- There being no further business, the meeting adjourned at 10:17 a.m.

6

PRESIDENT'S REPORT
Sigrid DaVeiga, MD

NEW/OLD BUSINESS – BYLAWS AMENDMENT

Sigrid DaVeiga, MD

19

NEW/OLD BUSINESS

Proposed Bylaws Amendment – Creates a new PAAA Standing Committee on Diversity, Equity, and Inclusion. The language would add new paragraph i in Section 2.

ARTICLE VI – COMMITTEES

- Section 2. The Standing Committee chairs shall be members of the Board of Regents. The committees are:
  - i. Diversity, Equity, and Inclusion Committee - This committee is responsible for maintaining a repository of resources and model programs that serve to reduce barriers to entry into the medical profession and the A/I specialty for the historically underrepresented. Additionally, this committee is available as a resource, for example, to assist the Planning Committee for the Annual Meeting and other educational programs provided by PAAA to support consideration of diverse expert speakers and topics.

investigate . discover . treat

HARVARD MEDICAL SCHOOL

1

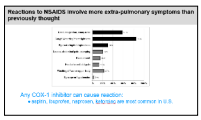
Conflict of Interest Disclosure

- Relevant financial relationships with commercial interests in the preceding 12 months:
  Sanofi, Regeneron, GSK, AstraZeneca

2

Overview of slides

Clinical disease, with a case, and findings from our cohort at BWH AERD Center



Reactions to NSAIDs and aspirin challenge/desensitization

Mechanism and role of leukotrienes

Newest treatment options – biologics and diet

3

AERD presents (usually) in adulthood, with a stereotyped pattern and common phenotype

Asthma

Nasal Polyps

Reactions to aspirin & COX-1 inhibitors

- Eosinophils in tissues and blood
- Sinus disease is severe -- (Anosmia, polyp recurrence)

How common is it?

- 7% of adults with asthma
- 14% of adults with severe asthma
- 25% of adults with asthma + polyps

Rajan and White, et al. JACI 2015, Meta-analysis

4

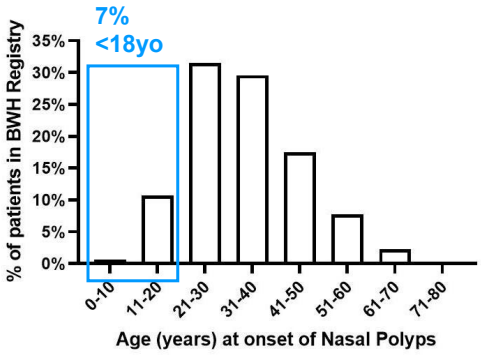
Classic AERD = 35 year-old "Danielle"

- Childhood → healthy, no asthma or allergies
- 23yo → "really bad cold" and persistent nasal congestion
- 24yo → asthma, continued congestion, lost sense of smell and taste
- 25yo → saw ENT surgeon, was "full of polyps", had 1st polyp surgery (great improvement!), but polyps returned in 6 months
- 25yo → **Cold-flu tablet** – 2 h later sneezed, chest tightness, wheezing
  → 3 mo later **ibuprofen** – to ER for albuterol and IV steroids
  → 6 months later took **Aleve** – same reaction
- Polyp surgeries: 25yo, 27yo, (no surgery while had 2 kids), 33yo, 35yo
- Now → Inhaled steroids, montelukast, steroid sprays, loratidine, Albuterol 3-4 days/wk, no sense of smell, antibiotics for sinusitis 2-3 times a year, polyps are back

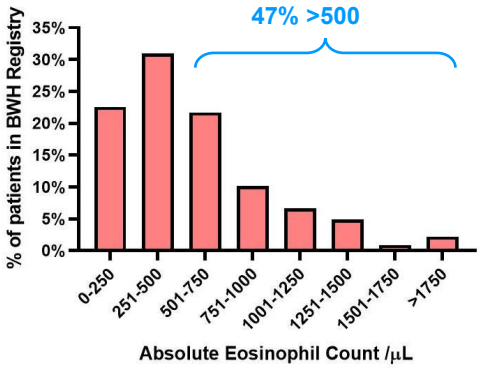
5

Findings from our cohort of >2000 patients at the BWH AERD Center

Largely adult-onset disease…



Blood eosinophilia is common

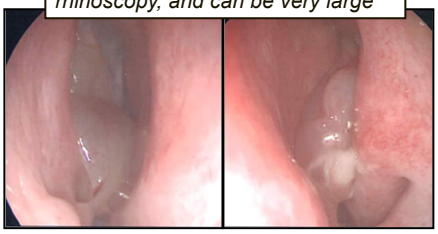


Not generally inherited.

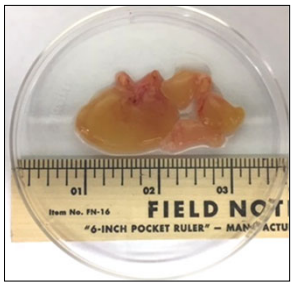
6

Surgery is a key treatment modality for AERD

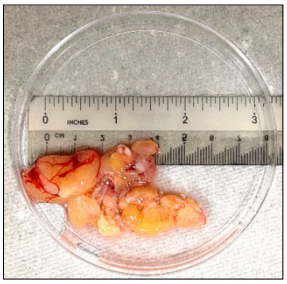
Typical appearance of polyps on rhinoscopy, and can be very large



Nasal polyps on rhinoscopy. 2015. – Selig, YK.



Nasal polyps excised.
2016 – Bhattacharyya, N.



Nasal polyps excised.
2022 – Lee, S.

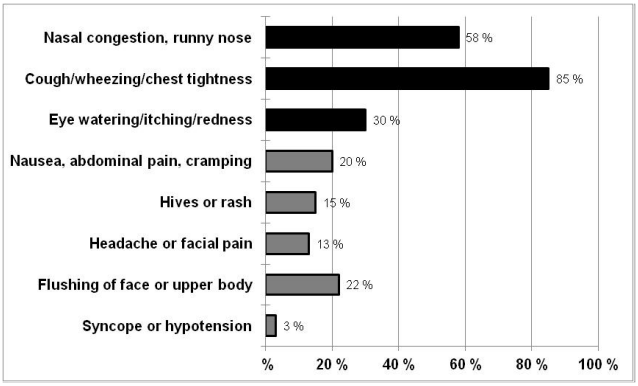
Surgical histories from patients at the BWH AERD Center

History of polyp surgery:
- 60% have had ≥2 surgeries
- 10% have had ≥5 surgeries

Rate of polyp regrowth post-op:
- 50% report regrowth ≤6 months
- Only 15% report no regrowth >2 years

7

Reactions to NSAIDS involve more extra-pulmonary symptoms than previously thought



Any COX-1 inhibitor can cause reaction:
- aspirin, ibuprofen, naproxen, ketorolac are most common in U.S.

8

Reactions to acetaminophen/Tylenol?

- 3-6% of AERD patients have some reaction to 650mg
  Szczeklik A, et al. JACI 1977;60:276-84
- 34% of AERD patients react (generally mild) to >1000mg
  Settipane RA, et al. JACI 1995;96:480-5

Reactions to celecoxib?

Celecoxib is contraindicated: "In patients who have experienced asthma, urticaria, or allergic-type reactions after taking aspirin or other NSAIDs."

TABLE I. Reactivity to selective COX-2 inhibitors with single-blind or double-blind placebo-controlled oral challenges in patients with NSAID-induced respiratory reactions

	No. of reactions	No. of DPT	Percentage of reactions
Celecoxib (n = 14)	0	297	0
Rofecoxib (n = 15)	1*	356	0.28
Etoricoxib (n = 2)	0	88	0
Parecoxib (n = 2)	0	12	0
Valdecoxib (n = 0)	N/A	N/A	N/A
COX-2 inhibitors combined	1	753	0.13

DPT, Drug provocation test; *n*, number of studies; *NSAID*, nonsteroidal anti-inflammatory drug.
*Transient urticaria with 5 mg, but tolerated higher doses without symptoms.

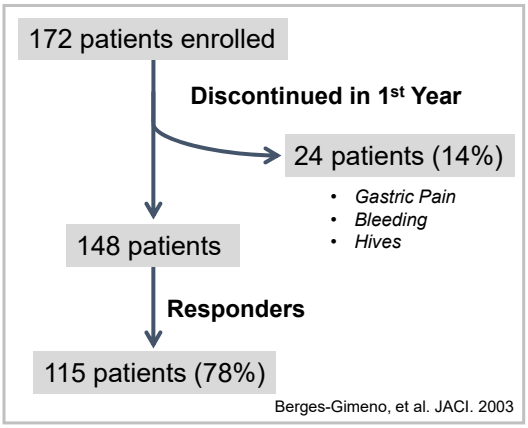
Li L, et al. JACI-IP 2019

9

Desensitization, then high-dose oral aspirin to delay polyp regrowth

- 67% patients report improvement after 6 months of high-dose aspirin
- Lower rates of polyp recurrence post-operatively
- ↓SNOT-20, ↑PNIF, some return of smell

Stevenson, et al. JACI 1996
Rozsasi, et al. Allergy 2008
Mizankowska-Mogilnicka, et al. JACI 2014



Berges-Gimeno, et al. JACI. 2003

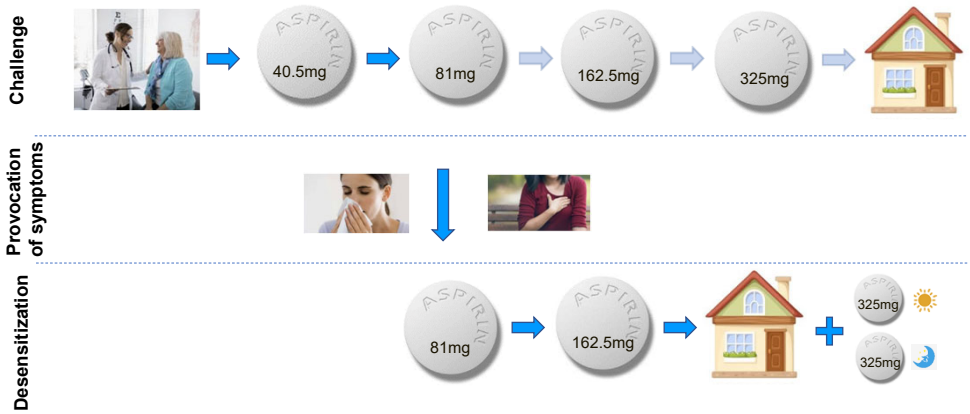
When to desensitize?
Preferably after surgery.

Ta and White, et al. JACI IP, 2015 (190 patients)

10

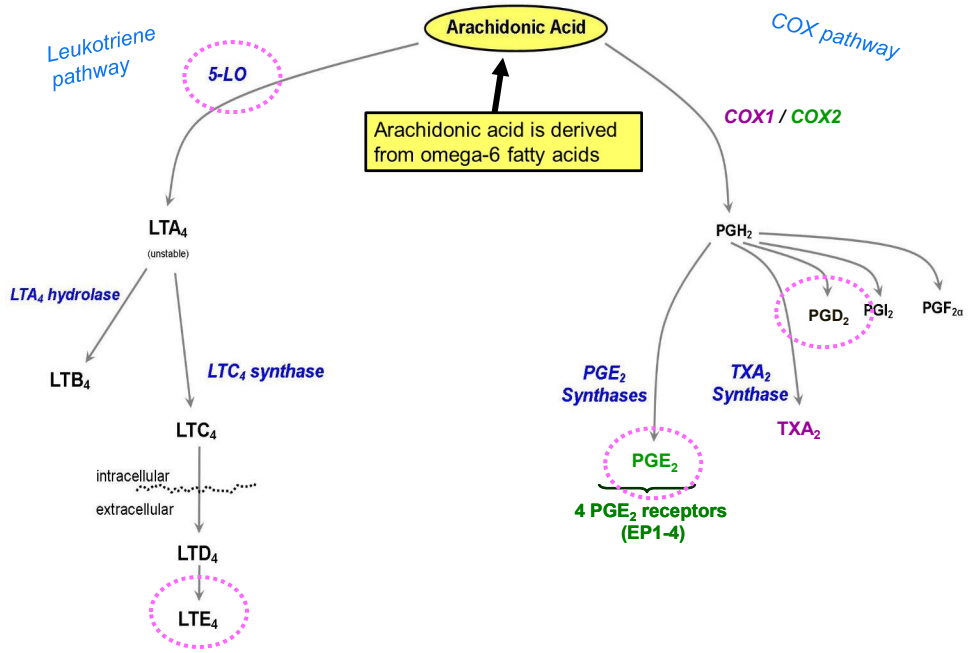
Aspirin challenge (to diagnose) or desensitization and high-dose oral aspirin (to treat) - PROTOCOL

- **Daily aspirin to maintain desensitization –**
  ★ benefits occur only if aspirin is taken regularly ★



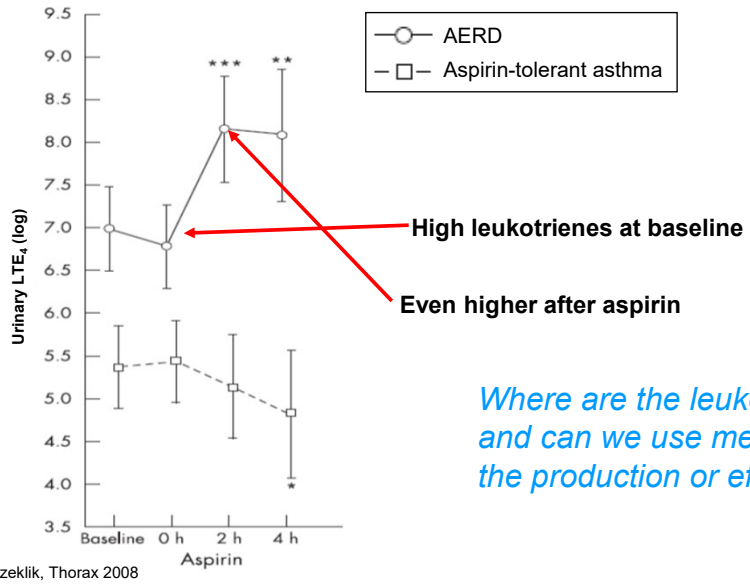
11

COX pathway vs 5-LO pathway



12

Role of leukotrienes in AERD – can measure in the urine



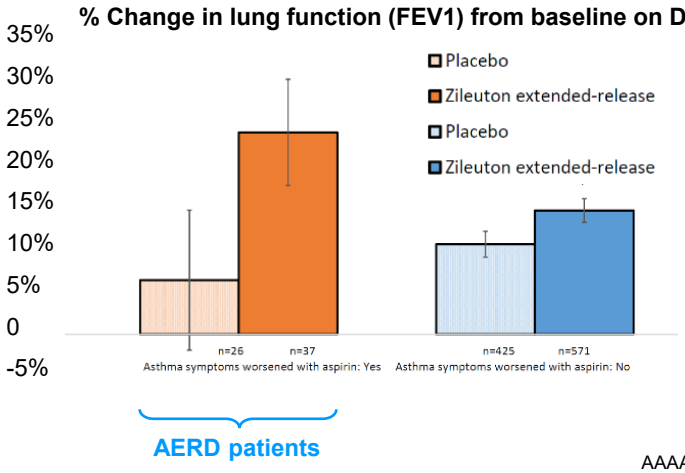
Where are the leukotrienes coming from, and can we use medications to decrease the production or effects of leukotrienes?

Mastalerz and Szczeklik, Thorax 2008

13

Zileuton is more effective in patients with AERD than in aspirin-tolerant asthma

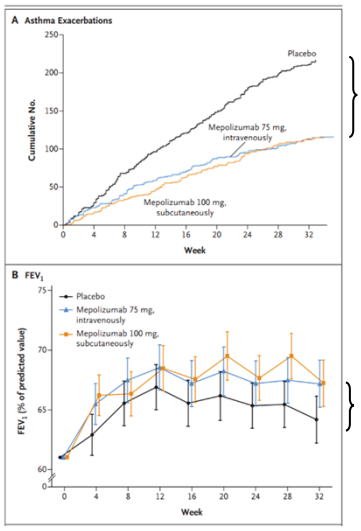
"Efficacy of Zileuton in Patients with Asthma and History of Aspirin Sensitivity: A Retrospective Analysis of Data from Two Phase 3 Studies"



AAAAI 2017 Poster L30

14

Mepolizumab (anti-IL-5) improves asthma control & lung function in eosinophilic asthma, reduces nasal polyp scores



Ortega HG, et al. NEJM 2014

- ↓ 47-53% reduction in asthma exacerbations
- >70% reduction in patients with eosinophils ≥500 cells/μL

- ↑ 98-100mL increase in FEV1
- 130-185mL increase in pts with eosinophils ≥500 cells/μL

SYNAPSE; Phase 3 nasal polyps
- 407 patients total
  - ↓ NP score of 0.73 at 52wks
  - No significant improvement in smell (UPSIT)
- 108 AERD patients
  - ↓ NP score of 0.89 at 52wks

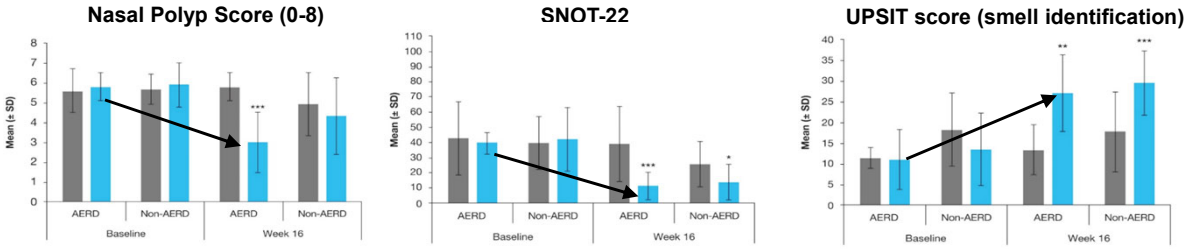
Han JK, et al. Lancet Resp Med 2021

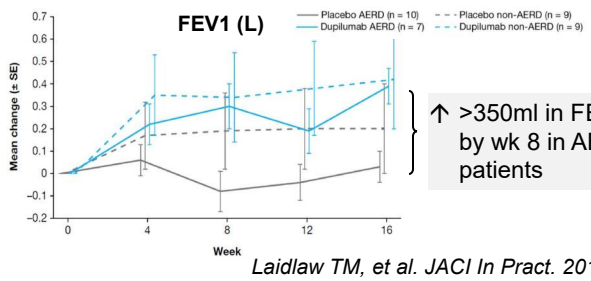
15

Dupilumab in AERD (Phase 2)

Placebo
Dupilumab

Re-analysis of Phase 2 study; 19/60 subjects had aspirin sensitivity





- ↑ >350ml in FEV1 by wk 8 in AERD patients

Laidlaw TM, et al. JACI In Pract. 2019.

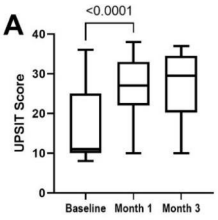
SINUS-52; Phase 3 nasal polyps
- 448 patients total
  - ↓ NP score of 2.06 at 24wks
  - Improvement in smell (UPSIT) of 11 pts.
- 79 AERD patients
  - ↓ NP score of 2.54 at 24wks

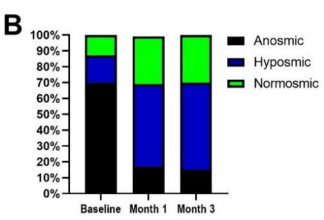
Bachert C, et al. Lancet 2019

16

Dupilumab improves airway disease within 1 month in AERD – pilot trial n=20

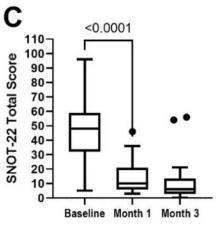
Average 11 more scents identified by Month 1

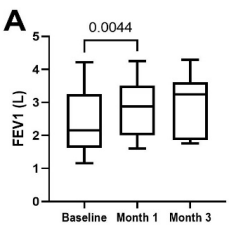


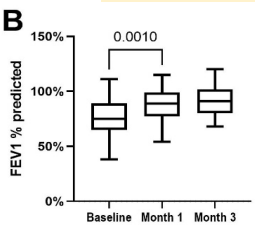


Average FEV1 improvement of 360mL/12.5% by Month 1

Average SNOT-22 improvement of 33 points by Month 1





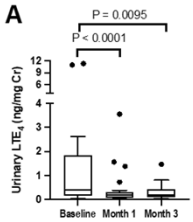


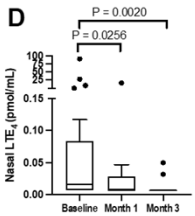
Buchheit & Laidlaw *et al.*
JACI, In Press

17

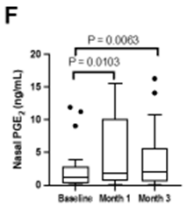
Mechanism of dupilumab-induced improvement in AERD? – pilot trial

↓ cysLTs
Thought to be from MCs

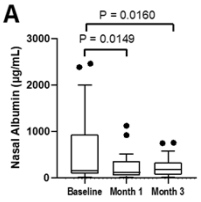




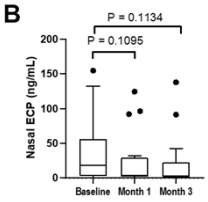
↑ Nasal PGE_2



↓ Nasal albumin



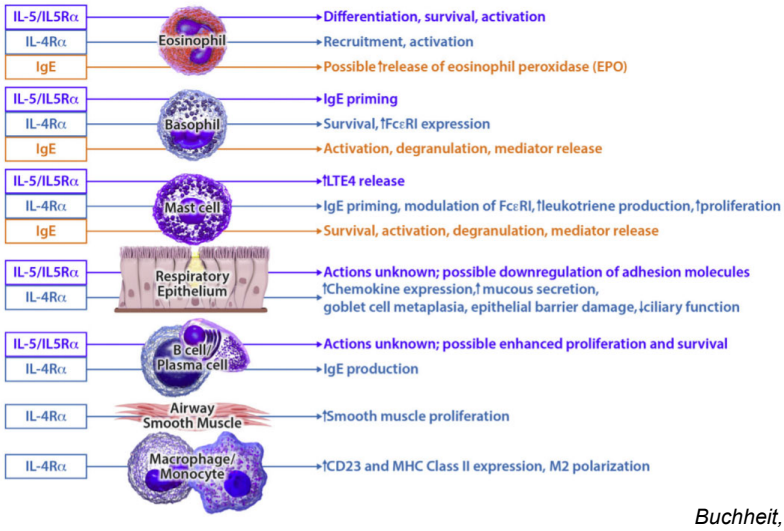
NO ⁞ in Nasal ECP



Buchheit & Laidlaw *et al.*
JACI, In Press

18

Impact of IgE, IL-5, and IL-4Rα on effector cells in upper and lower airway



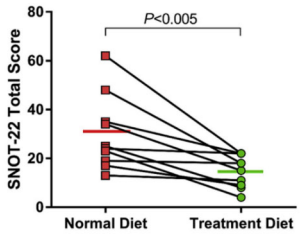
Buchheit, Laidlaw, Levy. JACI 2021

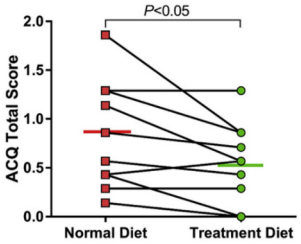
19

Diet to <u>reduce omega-6</u> fatty acids (and increase omega-3) can decrease leukotrienes and improve symptoms in AERD

<u>Good:</u>
- Wild-caught cold-water fish (salmon, herring, tuna)
- Fat-free dairy, egg white
- Leafy green vegetables
- Most vegetables and fruits
- Many beans, some grains

<u>Bad:</u>
- Vegetable oils (corn, soybean, safflower)
- Margarine
- Meats if animals ate corn/soy
- Eggs/dairy if animals ate corn/soy

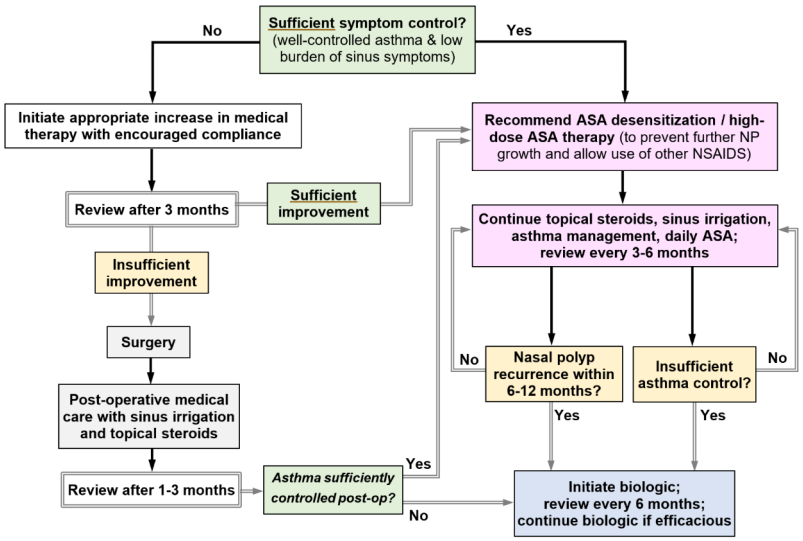




Schneider TR, Laidlaw TM. J Allergy Clin Immunol In Pract. 2018

20

Where biologics fit into AERD today



Adapted from Bachert, Desrosiers, Hellings, Laidlaw, JACI IP 2021

21

Summary – clinical points

- Triad: ask adult asthmatic patients about nasal polyps, sense of smell, COX-1 inhibitor tolerance
- Recognize classic reactions to aspirin & COX-1 inhibitors
- Understand role of leukotrienes and leukotriene modification in AERD
- Understand therapeutic role of new respiratory biologics

73RD PAAA ANNUAL MEETING

Disparities in Asthma

Presented by:
Torie Grant, MD, MHS

Saturday, June 25, 2022
12:15 p.m. – 1:00 p.m.

PAAA
Pennsylvania Allergy & Asthma Association

Disparities in Asthma: A Focus on the Social Determinants of Health

Torie Grant, MD, MHS
Assistant Professor of Medicine and Pediatrics
Johns Hopkins University School of Medicine

1

Disclosures

- Current Funding
  - National Institutes of Health K23 Mentored Patient-Oriented Research Career Development Award
  - American Academy of Allergy, Asthma, and Immunology Foundation Faculty Development Award

2

Objectives

1. Discuss asthma disparities through the lens of social determinants of health (SDoH)
2. Highlight how disparities in socioeconomic status, physical environment, and health care influence racial and ethnic asthma disparities

3

What are Social Determinants of Health (SDoH?

"The social determinants of health are the **non-medical factors that influence health outcomes.** They are the conditions in which people are **born, grow, work, live, and age**, and the **wider set of forces and systems shaping the conditions of daily life**. These forces and systems include *economic policies and systems, development agendas, social norms, social policies and political systems*."

https://www.who.int/health-topics/social-determinants-of-health

4

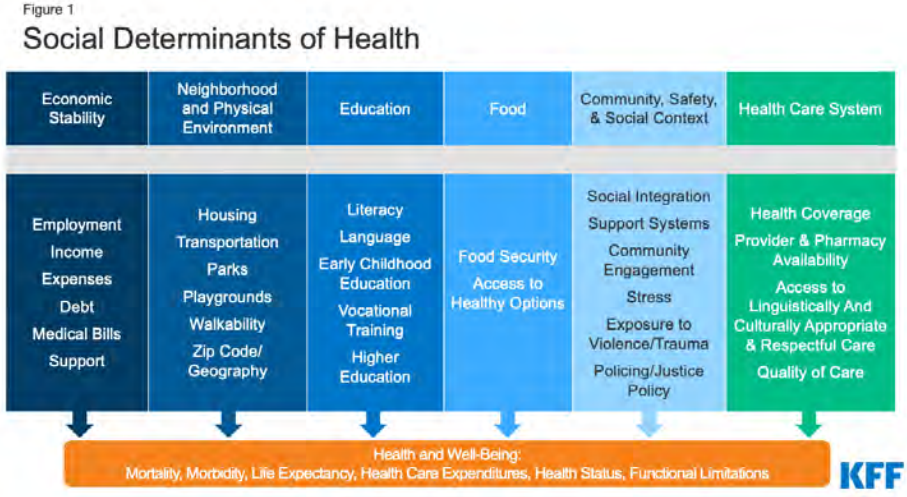
What are Social Determinants of Health (SDoH)?

- Income and social protection
- Education
- Unemployment and job insecurity
- Working life conditions
- Food insecurity
- Housing, basic amenities and the environment
- Early childhood development
- Social inclusion and non-discrimination
- Structural conflict
- Access to affordable health services of decent quality.

https://www.who.int/health-topics/social-determinants-of-health

5

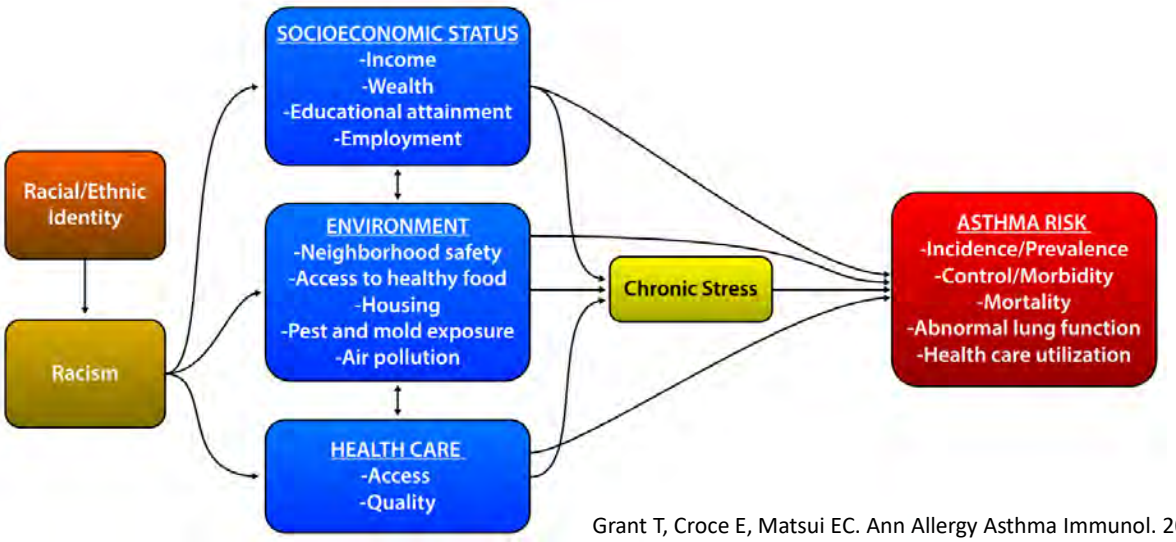
What are Social Determinants of Health (SDoH)?



https://www.kff.org/coronavirus-covid-19/issue-brief/tracking-social-determinants-of-health-during-the-covid-19-pandemic/

6

The relationship between racism, SDoH, and asthma disparities



Grant T, Croce E, Matsui EC. Ann Allergy Asthma Immunol. 2022

7

Why talk about race and racism when we are discussing asthma disparities?

- Asthma prevalence varies by race/ethnicity
  - Non-Latinx (NL) Blacks - 10.8%
  - Native American/Alaska Native - 10.8%
  - NL Whites - 7.6%
  - Latinx - 6.7%
  - NL Asians - 3.5%
  - NL Multiracial - 11.5%

https://www.cdc.gov/asthma/most_recent_national_asthma_data.htm

8

Why talk about race and racism when we are discussing asthma disparities?

- Asthma morbidity and mortality varies by race/ethnicity
  - Black Americans have higher rates ER visits and hospitalizations due to asthma[1]
  - Black Americans have higher asthma mortality[1]
  - Puerto Ricans and Dominican Americans have higher asthma prevalence, more exacerbations and ER visits due to asthma[1-3]

1. Moorman JE et al. *MMWR Surveill Summ*. 2007
2. Rosser FJ, et al. *Am J Respir Crit Care Med*. 2014
3. Dumanovsky T, et al. *Journal of Asthma*. 2007

9

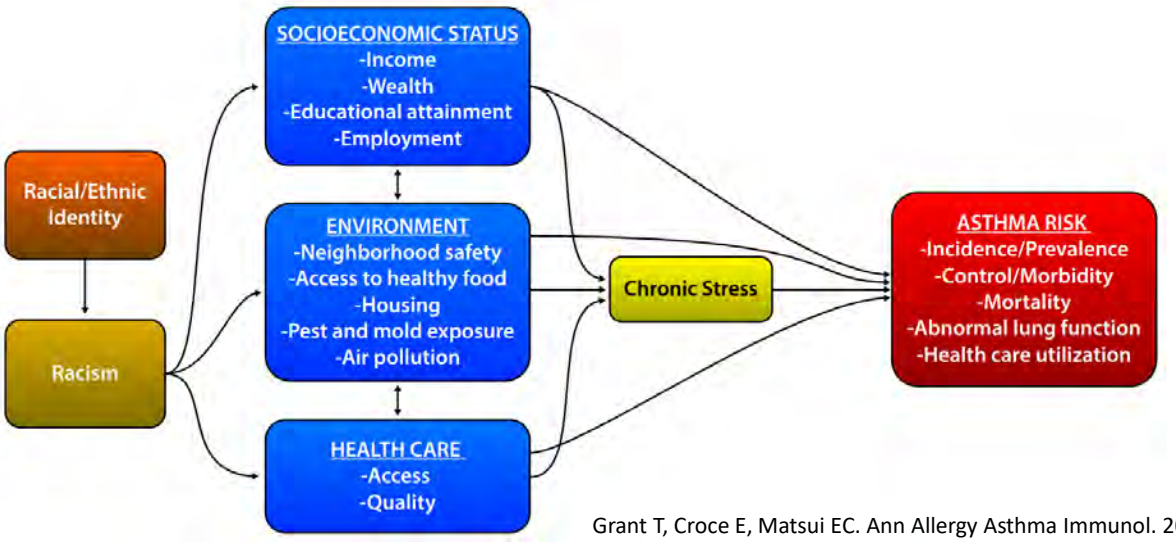
What are race and ethnicity?

- Race and ethnicity are *self-identified social constructs*
- American Sociological Association
  - Race = "physical differences that groups and cultures consider socially significant"
  - Hispanic or Latinx Ethnicity = "shared culture, such as language, ancestry, practices, and beliefs"

https://www.asanet.org/topics/race-and-ethnicity

10

The relationship between racism, SDoH, and asthma disparities



Grant T, Croce E, Matsui EC. Ann Allergy Asthma Immunol. 2022

11

What is racism?

- Racism occurs at the **individual and population level**
- **Prejudicial treatment** of individuals and communities based on the belief that **one race or ethnic group is superior or inferior to another**
- Racism **structures and affords opportunities and assigns value** and worth based on an individual's self-identified race or ethnicity
- Structural racism, which is population-level racism, exists in our **social, legal, economic, medical, housing, criminal justice, and political systems** and unfairly denies opportunity and disadvantages racial and ethnic minority populations

Bailey ZD, et al. *The Lancet*. 2017

12

What is racism?

America: Equity and Equality in Health 3

Structural racism and health inequities in the USA: evidence and interventions

Zinzi D Bailey, Nancy Krieger, Madina Agénor, Jasmine Graves, Natalia Linos, Mary T Bassett

Despite growing interest in understanding how social factors drive poor health outcomes, many academics, policy makers, scientists, elected officials, journalists, and others responsible for defining and responding to the public discourse remain reluctant to identify racism as a root cause of racial health inequities. In this conceptual report, the third in a Series on equity and equality in health in the USA, we use a contemporary and historical perspective to discuss research and interventions that grapple with the implications of what is known as structural racism on population health and health inequities. Structural racism refers to the totality of ways in which societies foster racial discrimination through mutually reinforcing systems of housing, education, employment, earnings, benefits, credit, media, health care, and criminal justice. These patterns and practices in turn reinforce discriminatory beliefs, values, and distribution of resources. We argue that a focus on structural racism offers a concrete, feasible, and promising approach towards advancing health equity and improving population health.

Lancet 2017; 389: 1453–63

See Editorial page 1369

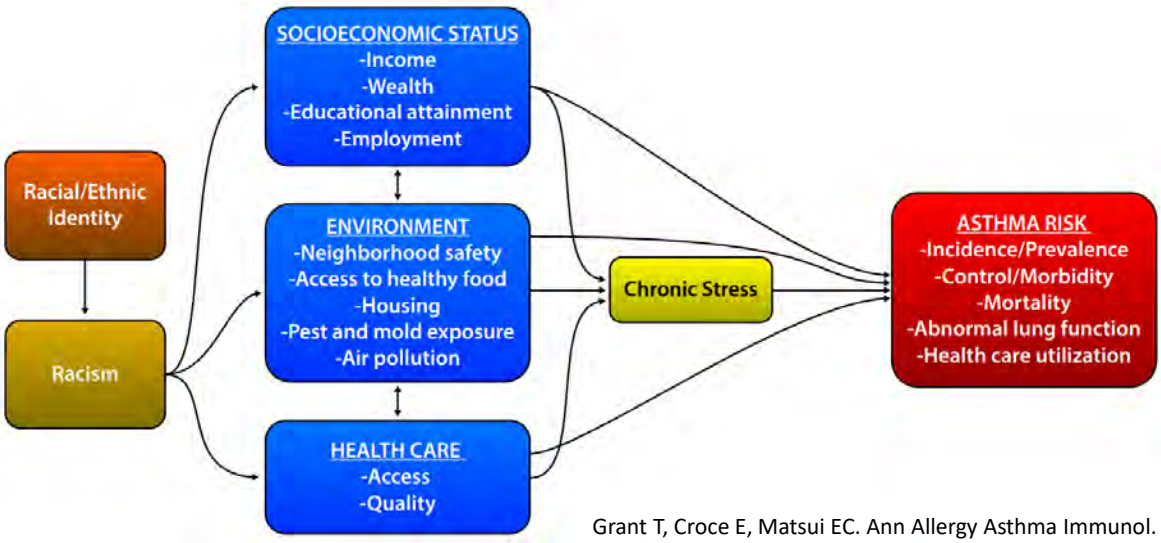
See Comment pages 1376 and 1378

This is the third in a Series of five papers about equity and equality in health in the USA

New York City Department of Health and Mental Hygiene, Long Island City, NY, USA (Z D Bailey ScD, N Linos ScD, M T Bassett MD); Department

13

The relationship between racism, SDoH, and asthma disparities



Grant T, Croce E, Matsui EC. Ann Allergy Asthma Immunol. 2022

14

Socioeconomic status (SES)

- Broad marker of social standing
- Affects basic needs such as housing, food, and education
- Affects upward mobility in society

- Often income, highest educational degree obtained, occupation, type of health insurance, or zip code are used as a surrogate for SES in medicine
- Income, wealth, education, and employment

15

Socioeconomic status (SES) – Income

- Low income has been repeatedly linked to increased asthma prevalence, exacerbations, hospitalizations and ICU admission
- In 2019, CDC[1] reports a dose-response relationship between poverty level and asthma prevalence:
  - 11.8% - family income <100% of the poverty threshold
  - 8.5% - family income 100% to <250% of the poverty threshold
  - 7.3% - family income 250% to <450% of the poverty threshold
  - 5.9% - family income ≥450% of the poverty threshold

- 7% increase in the odds of prevalent asthma for each one-unit decrease in the household income to poverty ratio[2]

[1]https://www.cdc.gov/asthma/most_recent_national_asthma_data.htm
[2]Keet CA, et al. *JACI* 2015

16

Socioeconomic status (SES) – Income

- Adults with a household income of <$50,000[1]
  - 1.6-fold higher rate of asthma treatment failure
  - 2.0-fold higher rate of asthma exacerbations
- Children living in extreme poverty (household income <$10,000)[2]
  - 125% higher odds of having a prior ICU admission for asthma
- Home ownership is associated with a 38% decreased in odds of ER visit for asthma in children[3]

[1]Cardet JC, et al. *JACI* 2018 [2]Bollinger ME, et al. *Ann. Allergy Asthma Immunol* 2019 [3] Hughes HK, et al. Acad Pediatr. 2017

17

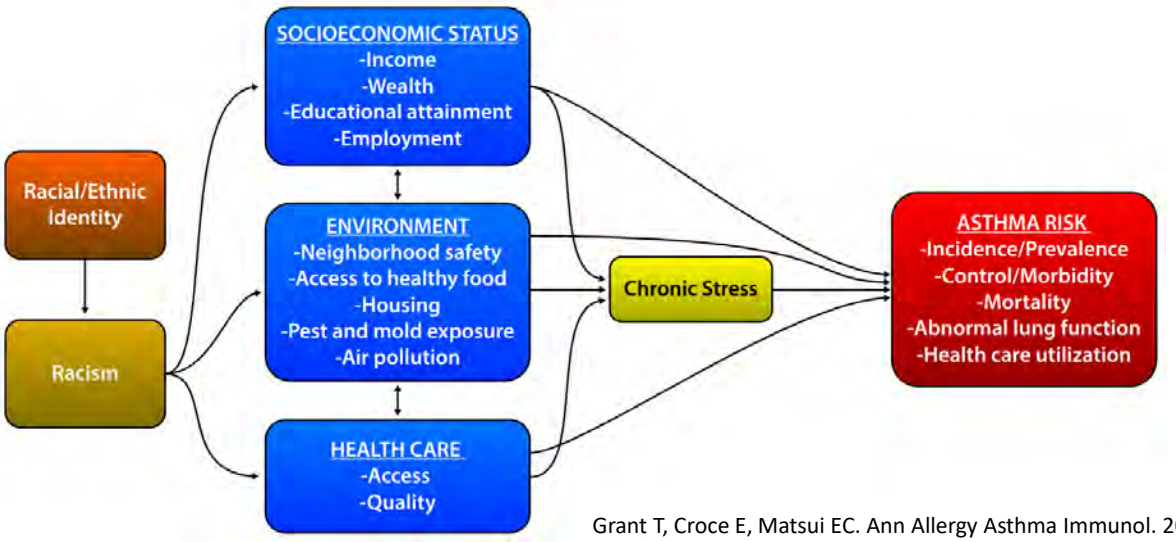
SES – Education

- Lower educational attainment contributes to limited health literacy
- CDC defines individual health literacy as:
  - "the degree to which individuals have the ability to find, understand, and use information and services to inform health-related decisions and actions for themselves and others."[1]
- Low health literacy[2]
  - Decreased asthma understanding and the perceived increased need for asthma medications
  - Inability to follow an asthma action plan
  - Lower likelihood of being treated by an asthma specialist
  - Poorer asthma control
  - More missed days of school
  - Increased ER visits and hospitalizations for asthma

[1] https://www.cdc.gov/healthliteracy/learn/index.html
[2] Morrison AK, et al. Pediatrics in Review 2019

18

The relationship between racism, SDoH, and asthma disparities



Grant T, Croce E, Matsui EC. Ann Allergy Asthma Immunol. 2022

19

Environment

- Neighborhood Safety
- Access to Affordable, Healthy Food
- Housing and Exposure to Pest, Mold, and Pollution

20

Environment – Neighborhood Safety

- Children in low-income and disadvantaged communities are frequently exposed to violence
- In a study out of Boston, maternal report of increased community violence during pregnancy was associated with increased risk of wheeze at age 2 in the offspring[1]
- In a study out of Chicago, neighborhoods with a high incidence of violent crime having a 27% increased odds of prevalent neighborhood asthma[2]
- In a study out of Chicago, living in a neighborhood with increased property and violent crimes, children had increased odds of parent-reported wheezing, lifetime asthma, and ER use and hospitalization due to asthma [3]

[1]Chiu Y-HM, et al. *JACI* 2014 [2]Gupta RS, et al. *Ann. Allergy Asthma Immunol* 2010 [3]Eldeirawi K, et al. *Ann. Allergy Asthma Immunol* 2016

21

Environment – Access to Affordable, Healthy Food

- Low-income communities have fewer healthy food options and poorer quality produce
- Healthy food is more expensive
- Low-income Black families are less likely to live in neighborhood with access to affordable healthy food[1]
- Healthier foods, such as diets rich in fruits and vegetables, have been associated with fewer asthma symptoms and higher lung function[2]
- Lack of affordable healthy food has also been linked to obesity, which is associated with asthma incidence and asthma morbidity[3]
- Proposed mechanisms for healthier diets effects on asthma include anti-inflammatory effects, changes in the intestinal microbiome, and reduced risk of obesity[2]

[1]Bower KM, et al. *Prev Med* 2014 [2]Grant T, et al. *J Allergy Clin Immunol Pract.* 2020 [3]Khalid F, et al. *J Asthma*. 2018

22

Environment – Housing, Indoor Exposures

- Poor housing quality and home disrepair have been associated with risk of childhood asthma and asthma morbidity[1]
- Poor housing repair is associated with pest (mouse, cockroach) allergen and mold exposure
- Pest allergen exposure has been repeatedly linked to risk of asthma, asthma prevalence, morbidity and abnormal lung function
- Exposure to mold is associated with childhood wheeze, asthma prevalence, and asthma morbidity

[1]Hughes HK, et al. Acad Pediatr. 2017

23

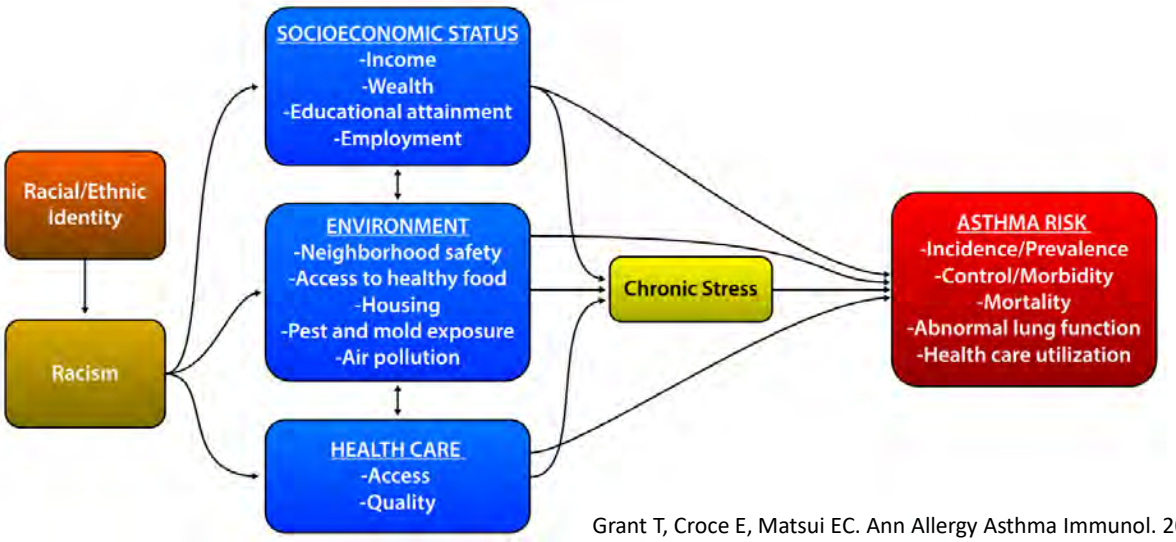
Environment – Pollution

- Racial and ethnic minority urban communities are exposed to higher levels of indoor air pollution, which is associated with asthma symptoms[1]
- Outdoor air pollution is associated with incident asthma, asthma morbidity, and lung function decline
- Black residents, persons living in poverty, and persons with lower education are more likely to be exposed to higher levels of outdoor air pollution[2]
- A study of eight California cities found higher diesel particle emissions in historically redlined communities[3]
  - 2.4 fold increase in age-adjusted ER visits for asthma

[1]Matsui EC, *Allergy* 2014 [2] https://www.lung.org/clean-air/outdoors/who-is-at-risk/disparities
[3]Nardone A, et al. *The Lancet Planetary Health*. 2020

24

The relationship between racism, SDoH, and asthma disparities



Grant T, Croce E, Matsui EC. Ann Allergy Asthma Immunol. 2022

25

Health Care Access and Quality

- Black and Latinx patients are more likely to be uninsured than White patients[1]
- Black and Latinx families are more likely to live in zip codes with primary care physician shortages[2]
- Black and Latinx children with the same insurance were less likely to see a specialist for asthma than White children[3]

- Lack of health insurance, access to primary care, and fewer referrals to asthma specialists all result in higher ER utilization for asthma, increased school and work absences, decreased provider consistency, uncontrolled asthma, and overall worse asthma care

[1]https://www.census.gov/content/dam/Census/library/publications/2019/demo/p60-267.pdf [2] Gaskin DJ, et al. *Health Serv Res*. 2012 [3]Stewart KA, et al. *Arch Pediatr Adolesc Med*. 2010

26

Health Care Quality

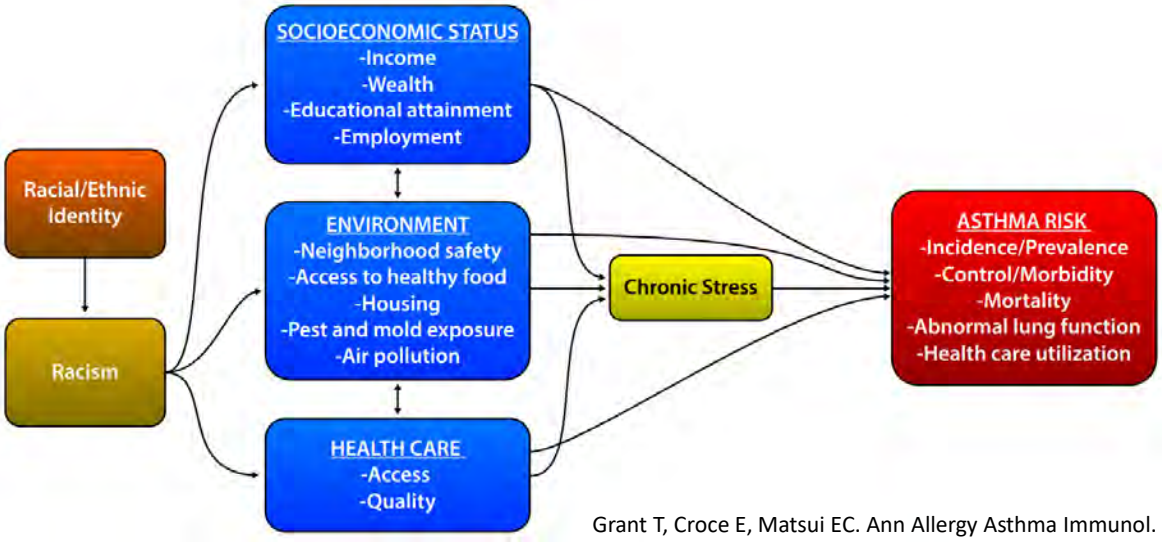
- Underuse of asthma biologics in Black and Latinx patients

- 2021 study found patients with public insurance were less like to be prescribed a biologic for asthma treatment[1]
- Among patients with public insurance, racial and ethnic minority patients were less likely to be prescribed an asthma biologic compared with White patients[1]

[1]Akenroye AT, et al. *J Allergy Clin Immunol Pract* 2021

27

The relationship between racism, SDoH, and asthma disparities



Grant T, Croce E, Matsui EC. Ann Allergy Asthma Immunol. 2022

28

Chronic Stress

- Families living in poverty and racial and ethnic minority populations experience higher levels of stress from many sources:[1]
  - income instability
  - lower education
  - fewer assets
  - barriers to employment
  - food insecurity
  - higher rates of incarceration
  - social disadvantage
  - exposure to violence
- High levels of chronic stress in children and adults have been associated with increased asthma exacerbations, decreased asthma control, increased hospitalizations, decreased quality of life, and decreased lung function

[1]https://www.apa.org/pi/health-equity/resources/stress-report.pdf

29

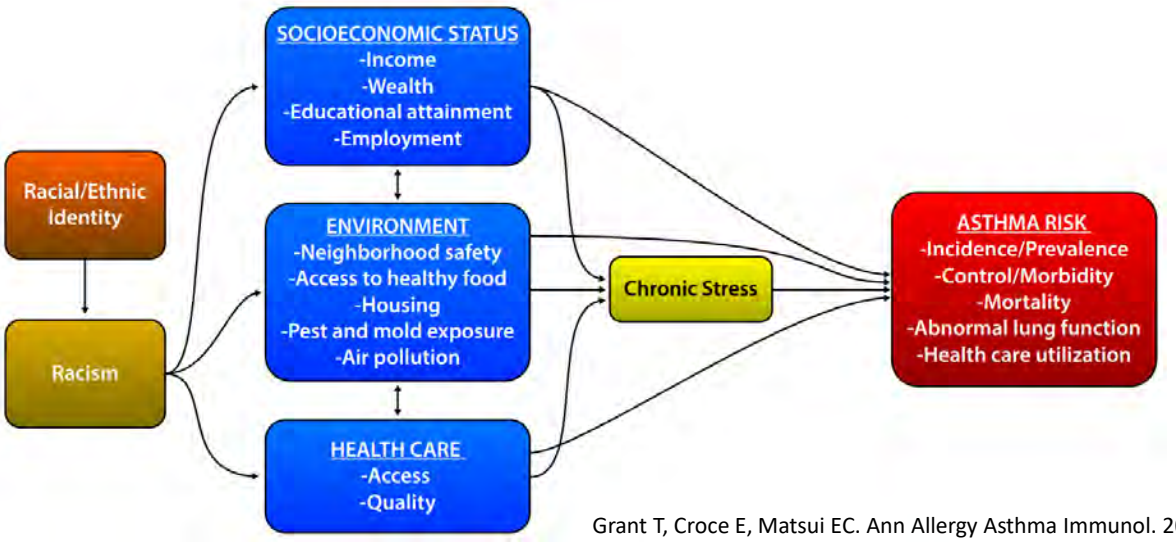
Chronic Stress

- Effects of chronic stress on asthma include chronic hypothalamic-pituitary-adrenocortical activation[1] leading to:
  - ↓β2 adrenergic and glucocorticoid receptors
  - ↓Responsiveness to asthma medications
  - ↑Asthma symptoms
- Maternal prenatal stress[2] leading to:
  - ↑IL-13 response , ↓IFN-γ response to allergen/mitogen stimulation in cord blood mononuclear cells
- Early life (<3yrs) exposure to environmental stressors and maternal depression, anxiety has been associated with asthma diagnosis[3]

[1]Landeo-Gutierrez J, et al. *Ann. Allergy Asthma Immunol* 2020 [2]Wright RJ, et al. *Am J Respir Crit Care Med*. 2010 [3] Rosa M, et al. *Curr Opin Allergy Clin Immunol*. 2018

30

The relationship between racism, SDoH, and asthma disparities



Grant T, Croce E, Matsui EC. Ann Allergy Asthma Immunol. 2022

31

Final Thoughts

- SDoH such as poverty, inequities in education and employment, poor housing quality, greater risk of exposure to pests, mold, and pollution, unequal health care access and quality, and high levels of chronic stress

- SDoH have been associated with asthma prevalence/incidence, morbidity, exacerbations, and abnormal lung function, which suggests that they are also likely a major cause of asthma disparities

32

Knowledge Gaps

- Degree to which SDoH contribute to asthma disparities
- Which SDoH contribute most to asthma disparities
- Mechanisms by which SDoH cause asthma disparities
- What are the most impactful approaches to mitigating economic barriers to asthma care and self-management
- Which environmental exposures should be prioritized for targeting to reduce asthma disparities
- What are the most impactful approaches to improving health care access and quality for racial and ethnic minority populations
- Which individual-level and systems-level interventions are most effective at reducing racial and ethnic asthma disparities

33

Aspirin Desensitization Protocols (Inpatient and/or Outpatient)

Recommended Protocols:

History of Urticaria/Angioedema with Aspirin

Time	Dose of aspirin
0	5 mg
½ hr	10 mg
1 hr	20 mg
1½ hr	40 mg
2 hr	81 mg
2½ hr	162 mg
3 hr	325 mg

No premedication recommended

History of Respiratory Symptoms with Aspirin

Time	Dose of aspirin
0 hour	40 mg
1 ½ hours	81 mg
3 hours	162 mg
4 ½ hours	325 mg
6 hours	650 mg (optional)

Consider premedication with leukotriene antagonist (montelukast, zileuton) to decrease lower respiratory symptoms

Safety of Outpatient Aspirin/NSAID Challenges in Non-AERD Patients

	No Reaction	Immediate Reaction	Delayed Reaction	Total
Aspirin	114	15	3	132
Ibuprofen	52	6	2	60
Naproxen	8	1	1	10
Other NSAID*	2	1	0	3
Total	176 (85.9%)	23 (11.2%)	6 (2.9%)	205 (100%)

>85% with no reaction and allergy removed
Of those that reacted, 62.5% occurred at >60 minutes

2

Learning Objectives

1. Identify how rheumatologic disease can present to the allergist/immunologist

2. Identify overlap between immune deficiency and rheumatologic disease

Case 1: 13 yo girl with urticaria

- Widespread urticaria ~2 months, with itching
- Initial CBC, ESR, CRP – normal
- ANA 1:160
- Responded to anti-histamines and steroids
- 2 years later, recurrence of urticaria, now with oral ulcers
  - Positive lupus anti-coagulant & other abnormalities

Spadoni et al, Lupus, 2011.

Urticaria in Lupus

- Pediatric SLE:
  - Multicenter study of 852 pts in Brazil showed 1% incidence (10 pts) of chronic urticaria ***(Ferriani et al, Int Arch Allergy Immunol, 2015)***
  - Median duration 190 days
- Review of 12,778 patients with chronic urticaria in Israel ***(Confino-Cohen, JACI, 2012)***
  - 0.4% had Systemic lupus erythematosus (SLE)
    - 15% had urticaria before a diagnosis of SLE
  - More common where hypothyroidism (~10%), hyperthyroidism (~2.6%), RA (1.5%), T1DM (1.3%), Sjogren syndrome (0.5%), Celiac (0.5%)

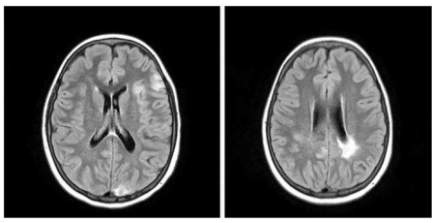
PAAA

Washington University in St. Louis School of Medicine

5

Case 2: 3 year old with arthritis

- 3 yo girl with polyarticular arthritis involving knees and ankles
- Continued disease for several years despite therapies (MTX, etanercept)
- Age 6: fevers, splenomegaly, AIHA, AIN
  - Concern for macrophage activation syndrome
  - Refractory cytopenias (rituximab, IVIG, cyclosporine, splenectomy)
- Age 9: autoimmune enteritis & CNS white matter lesions



PAAA

Oz & Tesher, Pediatric Rheumatology, 17: 82 (2019)

Washington University in St. Louis School of Medicine

6

Case 2: 3 year old with arthritis

- 3 yo girl with polyarticular arthritis involving knees and ankles
- Continued disease for several years despite therapies (MTX, etanercept)
- Age 6: fevers, splenomegaly, AIHA, AIN
  - Concern for MAS
  - Refractory cytopenias (rituximab, IVIG, cyclosporine, splenectomy)
- Age 9: autoimmune enteritis & CNS white matter lesions

- LRBA deficiency diagnosed (compound heterozygous variants in LRBA)
- Age 15: started abatacept (CTLA4-Ig) with improvement, sirolimus later added
- Age 18: hematopoietic stem cell transplant

PAAA

Oz & Tesher, Pediatric Rheumatology, 17: 82 (2019)

Washington University in St. Louis School of Medicine

8

Rheumatology in the AI clinic

Outline

- Allergy/Immunology manifestations of common rheumatologic disease, with a focus on pediatric rheumatology
- Rheumatologic disease seen in Inborn Errors of Immunity (IEI)

Systemic Lupus Erythematosus (SLE)

ACR Rheumatology Image Library

Systemic Lupus Erythematosus (SLE)

- Prevalence in the US is 20-50/100,000
- Increased prevalence in Asian, black, and Hispanic individuals
- F>M, 7:1 – 15:1 overall
  - For patients <9 yo, F:M is 4:3
- 20% of patients present <16 years of age
- Very rare before age 5 (look for an immune deficiency!)

ACR Rheumatology Image Library

Washington University in St. Louis
School of Medicine

11

Clincial symptoms

Physical exam findings/symptoms:
- Malar rash
- Oral hard palate or nasal mucocutaneous ulcers
- Vasculitic rashes
- Photosensitivity
- Nonerosive arthritis
- Encephalopathy: szs, psychosis

Organ damage:
- Nephritis
- Pleuritis or pericarditis
- Other organ involvement: liver, pancreas, lungs, GI

Laboratory studies:
- Cytopenias, immune mediated:
  - Hemolytic anemia; WBC <4k 2+ times; ALC <1.5k 2+ times; or Plt <100k.
- High-positive ANA
- Other positive immunoserology:
  - dsDNA; anti-Smith; Antiphospholipid ab

12

Most common clinical features of childhood SLE

- Review of 256 Pediatric SLE pts in Toronto, 4.7:1 F:M from 1982-2005.

Symptom	At diagnosis %	Ever %
Arthritis	61	67
Malar rash	61	66
Headache	58	62
Nephritis	37	55
Fatigue	50	55

Hiraki et al, J Pediatr, 2008.
Tucker et al, Lupus, 2008

13

Rashes in SLE

Small vessel vasculitis, non-blanching

14

Rashes in SLE

Discoid lupus

Photosensitive malar rash

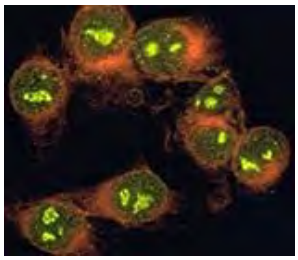
ACR Rheumatology Image Library

Rashes in SLE

ACR Rheumatology Image Library

Initial evaluation of suspected lupus in AI clinic

- Laboratory studies:
  - CBC
  - ANA (if high → dsDNA & other antibodies)
  - ESR (CRP rarely elevated)
  - Urinalysis for nephritis (protein/blood)
  - IgG typically *elevated*
- Other diagnostic tests:
  - Chest x-ray for chest pain/effusion
  - EKG/echocardiogram if there is concern for pericardial effusion



ANA

PAAA

Washington University in St. Louis
School of Medicine

17

ANA in healthy populations

- Low titer ANAs (<1:320) are common in healthy individuals and don't always require follow-up

ANA titer	699 children Canada[1]	125 adults International[2]	304 adults Mexico[3]
1:20-1:40	17%	32%	35%
1:80	10%	13%	13%
1:160	9%	5%	3%
1:320	5%	3%	1%

- Patients with titer ≥ 1:160-1:320 warrant further evaluation

[1] Malleson et al, Arch Dis Child, 1997

School of Medicine

18

Juvenile Dermatomyositis (JDM)

- Inflammatory disease of the skin, muscle, and blood vessels.

  - Rare, incidence is ~1:100,000 kids
  - Prior to corticosteroids 1/3 of children died
  - Proximal muscle weakness
  - Characteristic rash:
    - Eyelids
    - Hands (gottron's papules)
    - Papules on extensor surfaces (elbows/knees)

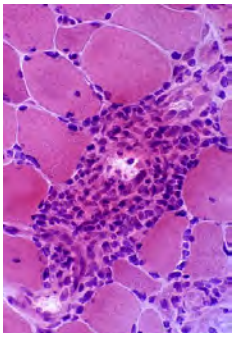
Clinical signs of JDM

World J Dermatol. May 2, 2015; 4(2): 80-94

ACR Rheumatology Image Library

Initial Evaluation of JDM in the AI Clinic

- Muscle enzymes
  - CK, aldolase, AST, ALT, LDH
- Acute phase reactants may or may not be elevated
- Consider imaging of affected muscle:
  - MRI
  - Ultrasound



http://www.neuro.wustl.edu/neuromuscular

Raynaud Phenomenon

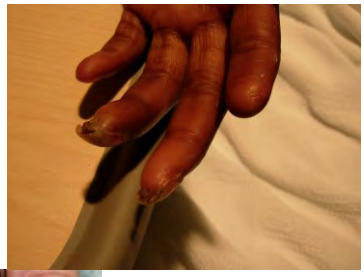
- Transient arterial vasospasm
- Can be 3-color phase:
  - Pallor → Cyanosis → Erythema/pain
- Dark skin tends to have pallor
- Frequently sharply demarcated
- Often associated with cold

https://www.nhs.uk/conditions/raynauds/

ACR Rheumatology Image Library

Primary vs. Secondary

- Primary Raynaud is a benign exaggerated vasoconstriction response
  - 5-20% of women; 5-15% of men
- Secondary Raynaud:
  - Associated with systemic disease
    - Scleroderma
    - Lupus
    - Overlap syndromes
  - Risk of ulceration
  - Requires treatment



PAAA

Washington University in St. Louis
School of Medicine

23

Evaluation of Raynaud Phenomenon

- Primary:
  - Triggers apparent to patient
  - No systemic symptoms
  - Normal nailbed capillaries
  - No further testing necessary
- Secondary:
  - Other systemic symptoms
  - Can see dilated nailbed capillaries
  - Initial lab studies:
    - CBC, ESR, renal function, ANA, antiphospholipid antibodies

Rheumatology in the AI clinic

Outline

- AI manifestations of common rheumatologic disease, with a focus on pediatric rheumatology

- **Rheumatologic disease seen in Inborn Errors of Immunity (IEI)**

PAAA

Washington University in St. Louis
School of Medicine

27

Inborn Errors of Immunity (**IEI**)

- Inborn Errors of Immunity (**IEI**) are inherited disorder of the immune system, also known Primary immunodeficiencies (**PID**)
- There are more than 470+ single-gene inborn errors of immunity
  - Diverse range of clinical symptoms
  - Infectious susceptibility, **autoimmunity**, autoinflammation, lymphoproliferation, bone marrow failure, cancers

PAAA

Washington University in St. Louis
School of Medicine

28

The spectrum of IEI

- Cellular & humoral Immunity
- Combined with other features
- Antibody deficiencies
- Immune dysregulation
- Phagocytic defects
- Intrinsic & innate immunity
- Autoinflammatory
- Complement deficiencies
- Bone marrow failure

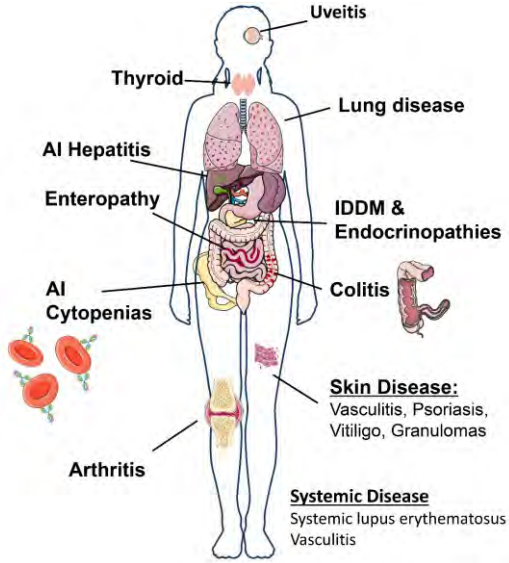
Total=476

Data from: IUIS Reports: Tangye et al, J Clin Immunol, 2020; Tangye et al, J Clin Immunol 2021; and https://iuis.org/committees/iei/

Washington University in St. Louis School of Medicine

29

Autoimmunity in IEI

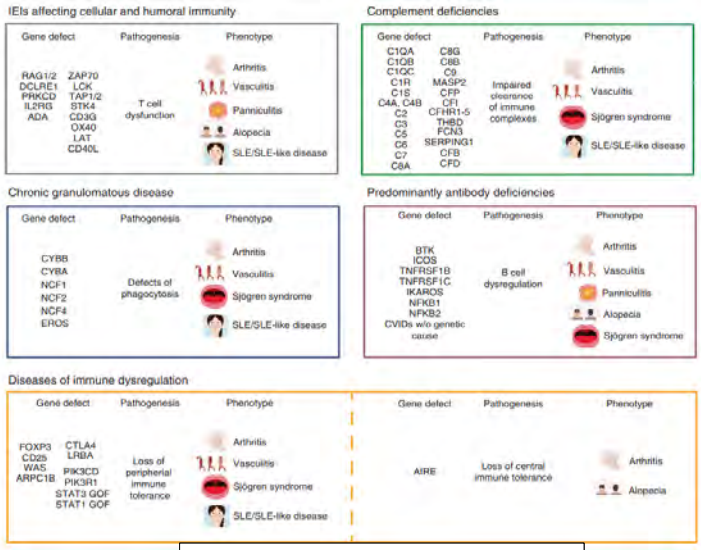


Kitcharoensakkul & Cooper, Curr Opin Allergy Immunol, 2019

Washington University in St. Louis School of Medicine

30

Rheumatologic disease and IEI



Bal et al, Pediatric Research, 2020, 87:293-9

Washington University in St. Louis
School of Medicine

31

Skin disease in IEI

Autoinflammatory diseases

- Often neonatal but can be adult-onset
- Urticaria, urticarial-like rashes
- Pustulosis
- Psoriasis
- Vasculopathy

NLRC4 Moghaddas et al, JACI, 2018.

Immune dysregulation syndromes

- Typically neonatal onset
- Eczema, dermatitis
- Psoriasis, scleroderma
- Pigmentation changes

STAT3 GOF
Khoury et al, Clin Therap, 2017

IPEX syndrome
Halabi-Tawil et al, 2008 BJD

Washington University in St. Louis
School of Medicine

32

Skin disease in IEI: Inflammatory lesions

Midline granulomas

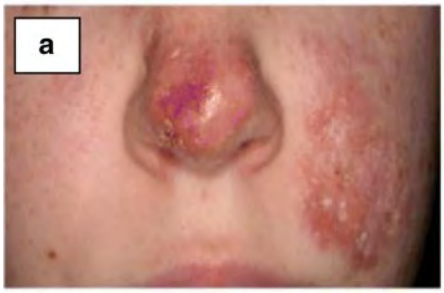
Hypomorphic *RAG1* variants
De Ravin et al, Blood 2010

Pyoderma gangrenosum

Leukocyte adhesion deficiency

Consider infectious causes

Vaccine-strain Rubella virus



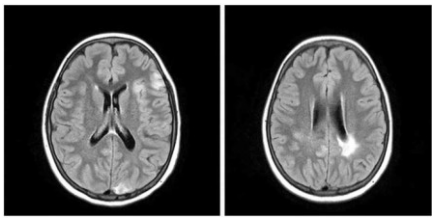
Combined T/B Immunodeficiency
Buchbinder et al, J Clin Immunol, 2019

Atypical EBV lymphoproliferative cutaneous disease

Magnesium transporter deficiency X-linked
Klinken et al, J of Clin Immunology, 2019.

Case: Arthritis and IEI

- 3 yo girl with polyarticular arthritis involving knees and ankles
- Continued disease for several years despite therapies (MTX, etanercept)
- Age 6: fevers, splenomegaly, AIHA, AIN
  - Concern for MAS
  - Refractory cytopenias (rituximab, IVIG, cyclosporine, splenectomy)
- Age 9: autoimmune enteritis & CNS white matter lesions



Oz & Tesher, Pediatric Rheumatology, 17: 82 (2019)

Washington University in St. Louis
School of Medicine

35

Arthritis and IEI

- 3 yo girl with polyarticular arthritis involving knees and ankles
- Continued disease for several years despite therapies (MTX, etanercept)
- Age 6: fevers, splenomegaly, AIHA, AIN
  - Concern for MAS
  - Refractory cytopenias (rituximab, IVIG, cyclosporine, splenectomy)
- Age 9: autoimmune enteritis & CNS white matter lesions

- LRBA deficiency diagnosed (compound het variants in LRBA)
- Age 15: started abatacept with improvement, sirolimus later added
- Age 18: hematopoietic stem cell transplant

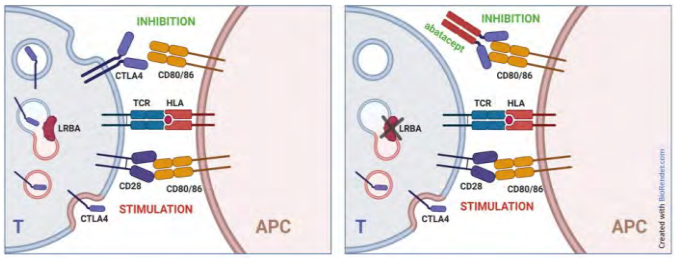
Oz & Tesher, Pediatric Rheumatology, 17: 82 (2019)

Washington University in St. Louis
School of Medicine

36

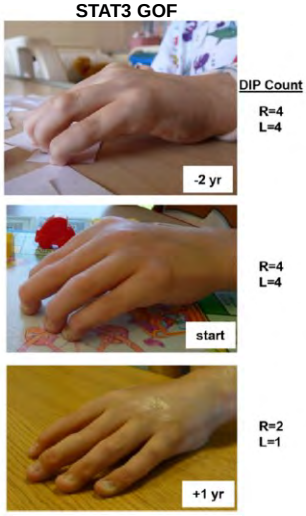
Arthritis and IEI

- Typically polyarticular
- May respond to steroids and therapies for JIA
- Consider how diagnosis may alter therapy



Boz et al, Front Immunol 2021

STAT3 GOF



Milner et al, Blood 2015

Key points for treating rheumatologic disease in IEI

- Treat the rheumatologic disease:
  - May require immune 'suppression', which for monogenic disease is really more 'modulation', *e.g.*, JAK inhibitor in STAT3 GOF or STAT1 GOF, sirolimus in IPEX syndrome or P13K gain of function disease
- Your expertise can help rheumatologists feel comfortable with treating disease and choose the right agent
  - Should disease monitoring and/or prophylaxis change?
  - Drugs to avoid – anti-TNF-alpha in patients with infectious susceptibility

Summary

- Rheumatologic disease can present to the AI clinic, often due to skin disease
- Patients with inborn errors of immunity can present with a wide range of rheumatologic disease, the AI physician can help guide immune modulation
- Early recognition and multi-disciplinary care is important for these complex patients

PENNSYLVANIA ALLERGY & ASTHMA ASSOCIATION

73RD PAAA ANNUAL MEETING

Patient Education in the Office

Presented by:
David Stukus, MD

Sunday, June 26, 2022
8:30 a.m. – 9:15 a.m.

PAAA
Pennsylvania Allergy & Asthma Association

Patient Education in the Office

David Stukus, MD, FAAAAI, FACAAI, FAAP

Professor of Clinical Pediatrics
Director, Food Allergy Treatment Center
Division of Allergy and Immunology
Nationwide Children's Hospital
Columbus, Ohio

@AllergyKidsDoc

NATIONWIDE CHILDREN'S
When your child needs a hospital, everything matters.

THE OHIO STATE UNIVERSITY
COLLEGE OF MEDICINE

1

Disclosures

- Social Media Medical Editor – American Academy of Allergy, Asthma and Immunology
- Associate Editor – Annals of Allergy, Asthma and Immunology
- Consultant – Before Brands, Integrity CE, Kaleo, Novartis
- Honoraria – ACAAI, AAP, AAAAI
- Royalties – Springer Publishing
- Non-financial:
  - Member – Joint Task Force on Practice Parameters
  - Member - Board of Regents, ACAAI

NATIONWIDE CHILDREN'S
When your child needs a hospital, everything matters.

THE OHIO STATE UNIVERSITY
COLLEGE OF MEDICINE

2

Objectives

- Appreciate the various ways in which patients are influenced by outside sources of information
- Understand the origins surrounding misconceptions specific to allergic conditions
- Anticipate confusion and misinformation from patients and actively address this during clinical encounters

3

Did You Ever Think THIS Would Cause Such an Uproar?

4

COVID-19: An 'Infodemic'

https://theconversation.com/controls-to-manage-fake-news-in-africa-are-affecting-freedom-of-expression-137808

5

Mis-in-fer-mey-shuhn

noun

1. false information that is spread, regardless of whether there is intent to mislead

Dictionary.com 'Word of the Year'

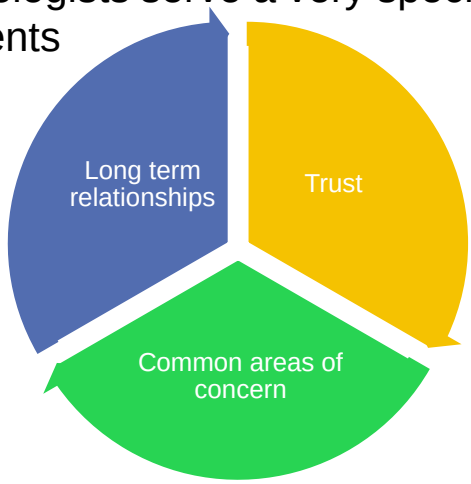
9

10

11

Initial Thoughts…

- Allergist/Immunologists serve a very special role in the lives of our patients



12

WE Have an Advantage

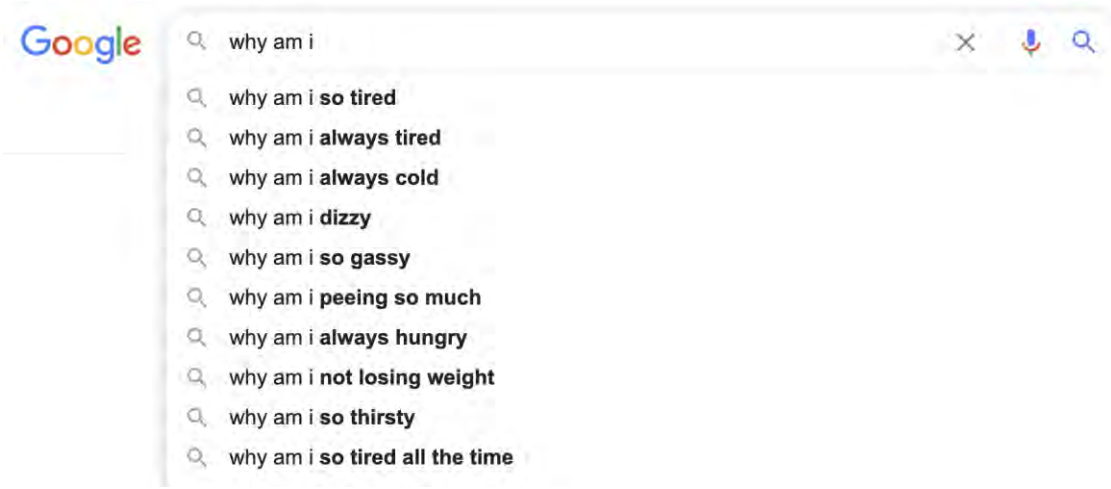
- Can ask questions
- Monitor body language
- Dive into nuance surrounding complex topics
- Most importantly…we need to:

- **Listen**
- **Give our time**
- **Show empathy**
- **Be non-judgmental**
- **Be available for follow up discussion**

13

There MUST Be Something Wrong…

14



Google
why am i
why am i so tired
why am i always tired
why am i always cold
why am i dizzy
why am i so gassy
why am i peeing so much
why am i always hungry
why am i not losing weight
why am i so thirsty
why am i so tired all the time

2 at Takeout Restaurant in U.K. Are Convicted of Manslaughter in Nut Allergy Death

By Palko Karasz • Oct. 27, 2018

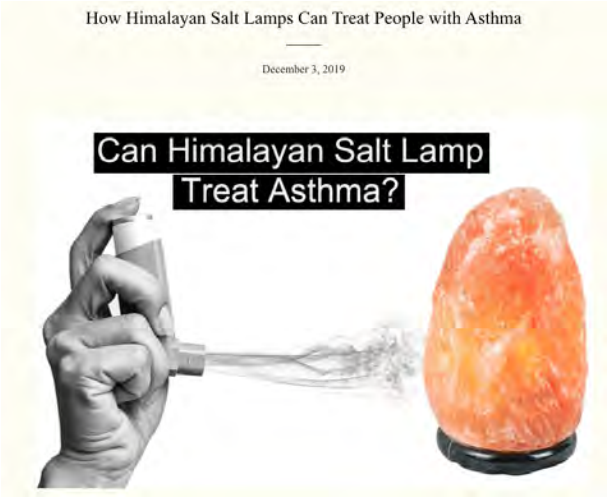
https://www.nytimes.com/2018/10/27/world/europe/uk-takeaway-allergy-death.html

25

Pseudoscience Bingo!!!

Inflammation	**Free radicals**	**Detox**	**Celebrity endorsement**	**Energy**
Cleanse	**Fatigue**	**Crystals**	**Naturopathic**	**All natural**
Chemical free	**Ancient Wisdom**	**FREE SPACE**	**Instinctively know best**	**Organic**
Conspiracy	**Molecules**	**Toxins**	**Cure**	**'Western' Medicine**
Pharma shills	**"Science doesn't know everything"**	**Government/ mind control**	**Miracle**	**Magnetic**

26



…are actually rock crystals…
…release negative ions into the air…
…we are surrounded by ions, some from outer space…
…some people claim to feel refreshed after a storm…probably due to the negative ions emitted…

The main culprit of asthma lies in the water vapors that dance around and are filled with allergens…and viruses.
…Himalayan salt lamps attract water molecules and cause them to evaporate, eliminating the air of any allergen or pollutant.

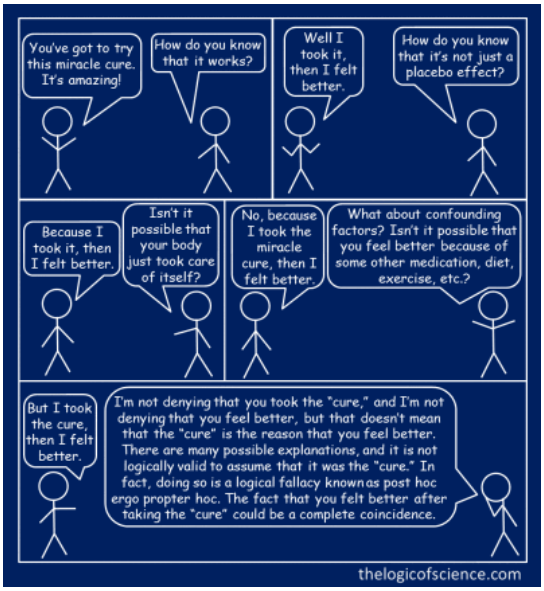
- **Improves blood flow/circulation**
- **Increases energy levels**
- **Helps us sleep better**

https://ambientsaltlamp.com/blogs/news/how-himalayan-salt-lamps-can-treat-people-with-asthma

27

The Plural of Anecdote…is NOT Data

- Logical fallacy
  - *Post hoc ergo propter hoc* = "after this, therefore because of this"
  - X happened before Y…therefore, X caused Y
- True representation is lacking
  - How many others tried and failed?
- No control → placebo effect
- Small sample size
- Not collected systematically



https://thelogicofscience.com/2016/02/10/5-reasons-why-anecdotes-are-totally-worthless/

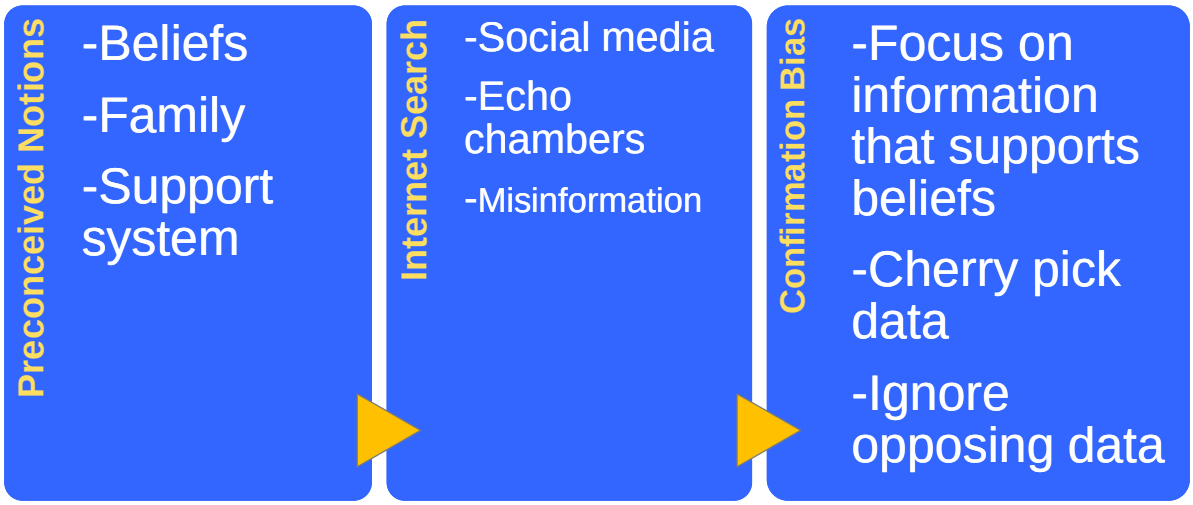
39

“Research”

40

"Research" in 2022



41

What's the Harm?

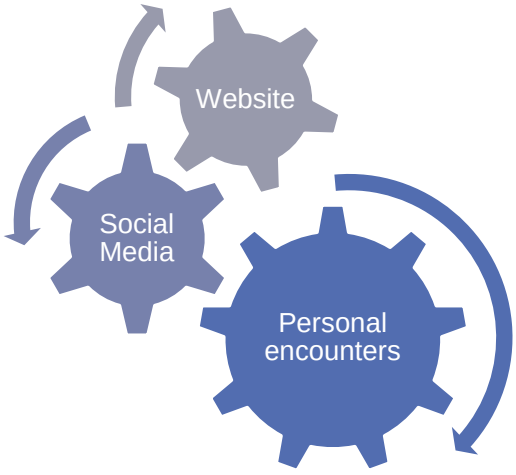
People don't know who to trust anymore

42

Practical Tools You Can Start Using Today

43

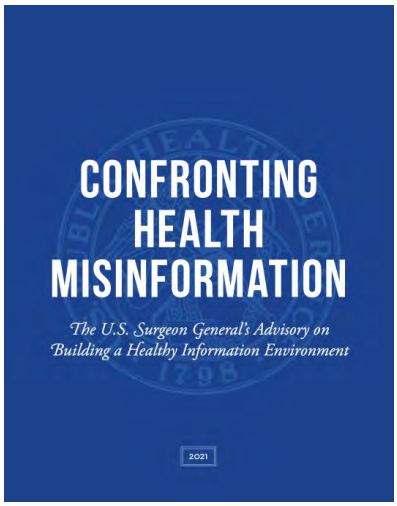
Multipronged Approach



44

What Health Professionals Can Do

- Proactively engage with patients and the public
- Use technology and media platforms to share evidence based information
- Partner with community groups and local organizations



https://www.hhs.gov/sites/default/files/surgeon-general-misinformation-advisory.pdf

45

It's Time To Reclaim Our Expertise and Role as Educators

- This requires
  - Time
  - Effort
  - Dedication
  - Respect
- Let's become better
  - Listeners
  - Communicators

46

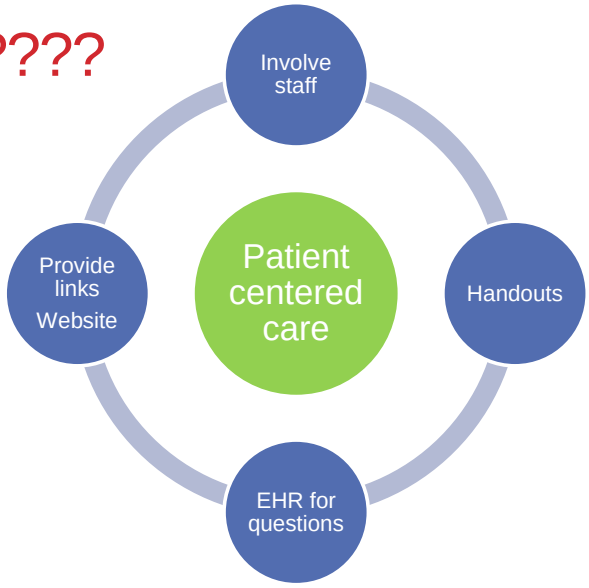
Steps YOU Can Take Now

- Try to ‘think like a patient’ to understand how and where they are receiving information
- Discuss internet searches, social media, and misinformation with patients
- Increase your awareness regarding the amount and types of misinformation surrounding various conditions
- Get involved!!!

47

Who Has the Time????

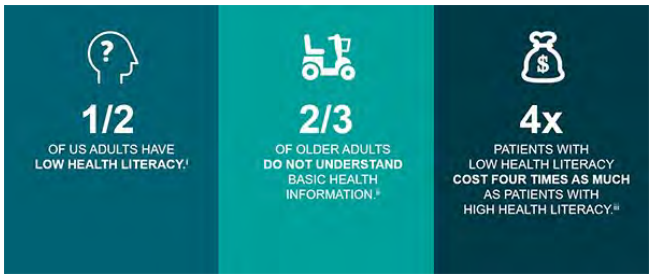
WE need to match the education we provide to the preferred learning style of each patient



48

Many of Our Patients Have Low Health Literacy

- "The degree to which individuals have the capacity to obtain, process, and understand basic health information needed to make appropriate health decisions."



https://www.healthypeople.gov/2020/topics-objectives/topic/social-determinants-health/interventions-resources/health-literacy

49

Red Flags for Low Literacy

- ✓ Frequently missed appointments
- ✓ Incomplete registration forms
- ✓ Non-compliance with medication
- ✓ Unable to name medications, explain purpose or dosing
- ✓ Identifies pills by looking at them, not reading label
- ✓ Unable to give coherent, sequential history
- ✓ Ask fewer questions
- ✓ Lack of follow-through on tests or referrals

https://www.ahrq.gov/health-literacy/improve/precautions/1stedition/tool3.html

50

Keep it Simple…But Don't Dumb it Down

51

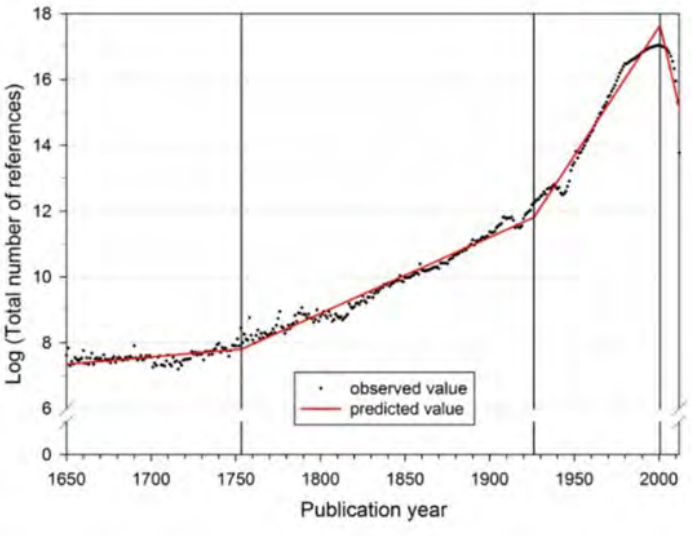


Figure 2. Segmented growth of the annual number of cited references from 1650 to 2012 (citing publications from 1980 to 2012)

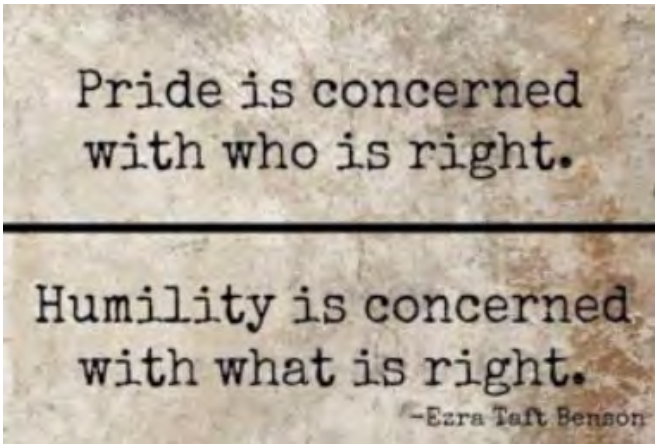
Bornmann L, et al. J Assoc Info Sci Tech: arxiv.org/abs/1402.4578

52

#ScienceIsHard



53

We Can't Reach Everyone

Nurse uses key, hairpin to try to prove she is magnetic from vaccine during Ohio House hearing (video)

Joanna Overholt (Source: Ohio Channel)

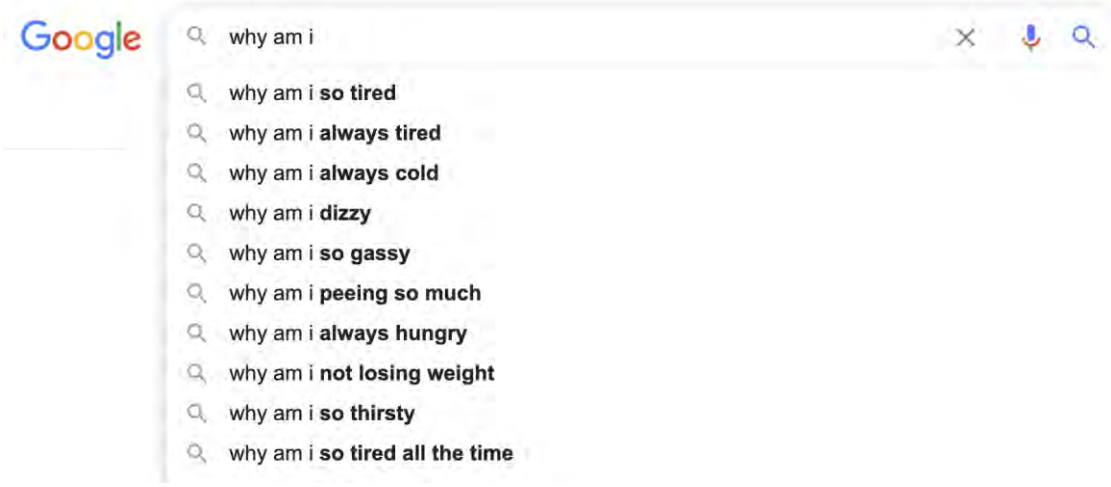
https://www.kbtx.com/2021/06/10/nurse-uses-key-hairpin-try-prove-she-is-magnetic-vaccine-during-ohio-house-hearing-video/

54

Just wanted you to know that your excellent simplified share of info on the delta variant finally convinced my hubby to get his vaccine! I just scheduled jt for today- he's been SO hesitant...and I haven't wanted to be the nagging wife 😬🤦‍♀️

55

The Number 1 Thing YOU Can Do to Help Your Patients…



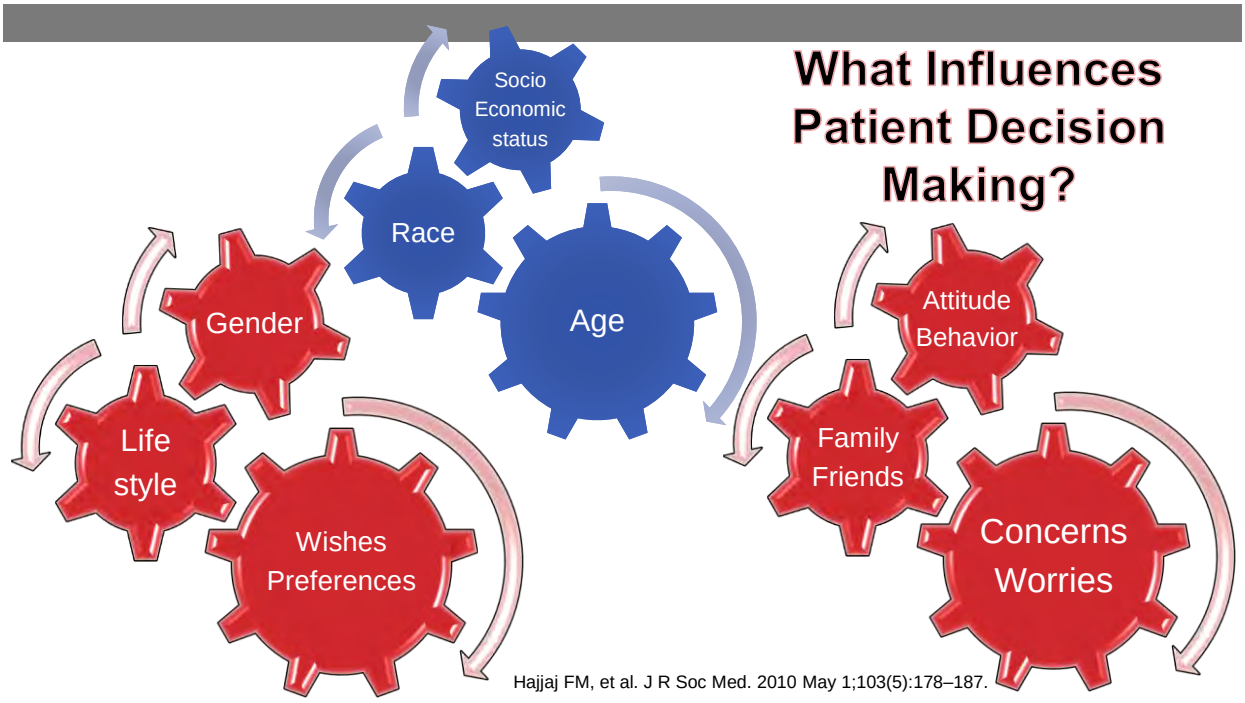
56

Learn, Anticipate, Address

- Provide anticipatory guidance at every visit
- Ask permission to discuss
- Make it a normal part of every encounter…especially the hard topics

- If you don't understand how your patients are being influenced, you won't be able to help them

57



Hajjaj FM, et al. J R Soc Med. 2010 May 1;103(5):178–187.

58

Word Choices Matter

59

Shared Decision Making

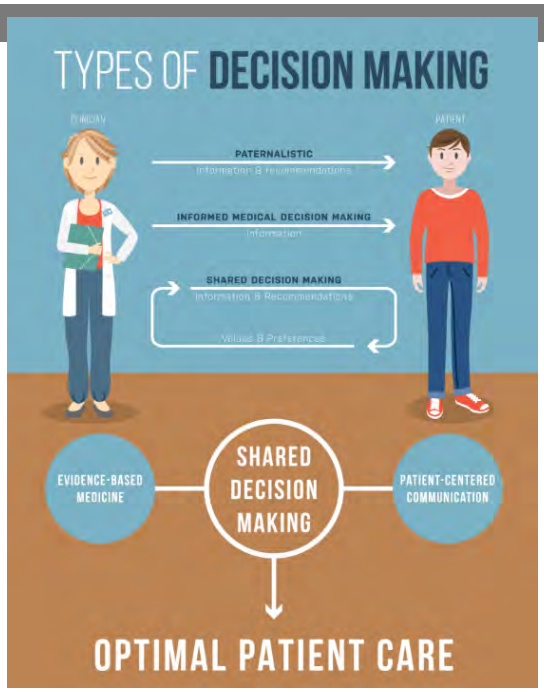
WE discuss evidence, options, risks

+

PATIENTS discuss preferences & values

+

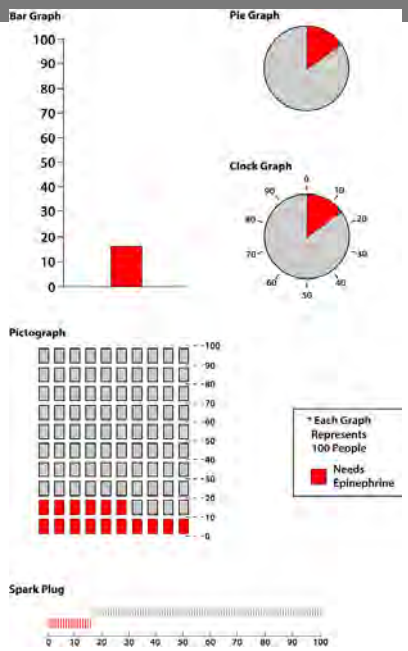
WE help PATIENTS make decisions based upon “what matters most”



60

Discuss Risk with Patients

- Provide numeric likelihoods of risks and benefits
- Provide absolute risks, not just relative risks
- Keep denominators consistent
- Keep time frames constant
- Use pictograms and other visual aids when possible
- Reduce superfluous information (cognitive overload)
- Provide positive and negative frames
- Keep risk in perspective of everyday hazards



Shaker M, et al. Ann Allergy Asthma Immunol. 2020;125(3):252-261.

61

The Simplest Way to Spot Coronavirus Misinformation on Social Media

A digital literacy expert shares his method

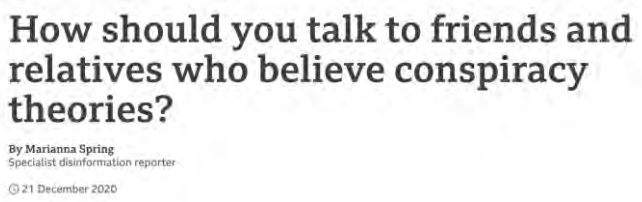
Will Oremus Follow
Mar 4 · 8 min read ★

He sums it up with the acronym SIFT:

1. Stop.
2. Investigate the source.
3. Find better coverage.
4. Trace claims, quotes, and media to the original context.

https://onezero.medium.com/the-simplest-way-to-spot-coronavirus-misinformation-on-social-media-4b7995448071

62



How should you talk to friends and relatives who believe conspiracy theories?

By Marianna Spring
Specialist disinformation reporter

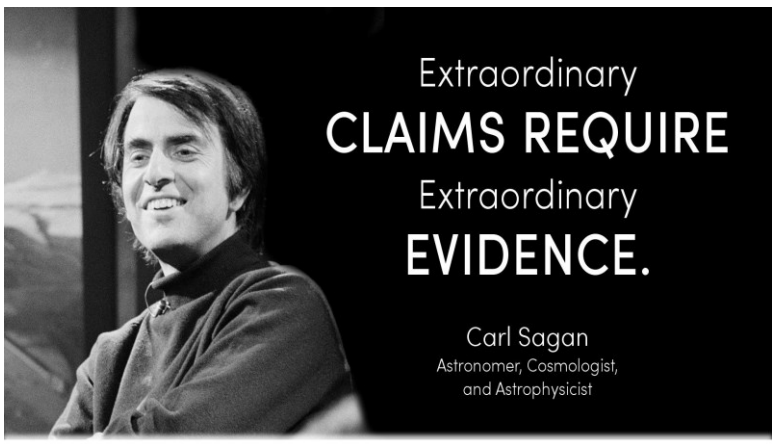
21 December 2020

- Keep calm
- Don't dismiss
- Encourage critical thinking
- Ask questions
- Don't expect immediate results
- You can't reach everyone

https://www.bbc.com/news/blogs-trending-55350794

63

- Encourage questions
- Listen to replies
- Offer logical explanations
- Admit when you don't know the answer
- Make yourself available for follow up questions

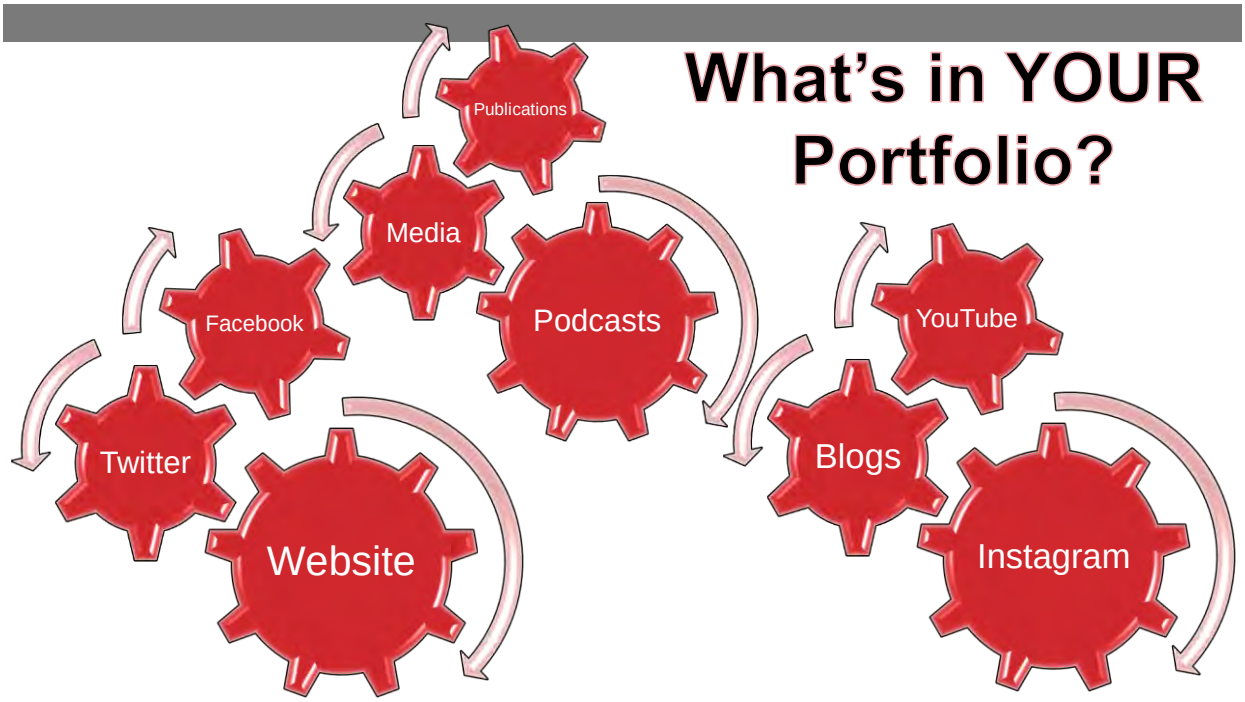


64

Addressing Misinformation Beyond Your Office Doors

65

What's in YOUR Portfolio?



66

We Are All Living in the Matrix

68

Meta

The metaverse is the next evolution of social connection. Our company's vision is to help bring the metaverse to life, so we are changing our name to reflect our commitment to this future.

Augmented reality

Through photo and video, AR lets you enhance shared experiences with playful virtual effects at swipe of a screen, letting you express yourself with the people who matter most.

A future made by all of us

The metaverse will be a collective project that goes beyond a single company. It will be created by people all over the world, and open to everyone.

https://about.facebook.com/meta/

69

This is What Keeps Me Up at Night

70

Steps YOU Can Take Now

- Try to ‘think like a patient’ to understand how and where they are receiving information
- Proactively ask patients about common areas of misinformation
- Provide resources and ENCOURAGE open communication

PENNSYLVANIA ALLERGY & ASTHMA ASSOCIATION

73RD PAAA ANNUAL MEETING

Immune Dysregulation

Presented by:
Megan Cooper, MD, PhD

Sunday, June 26, 2022
9:30 a.m. - 10:15 a.m.

PAAA
Pennsylvania Allergy & Asthma Association

Immune Dysregulation

PENNSYLVANIA ALLERGY & ASTHMA ASSOCIATION
73RD PAAA ANNUAL MEETING
JUNE 24-26, 2022 | THE HOTEL HERSHEY, HERSHEY, PA

Megan A. Cooper, MD, PhD
Professor of Pediatrics
Division of Rheumatology/Immunology
Washington University in St. Louis
Cooper_m@wustl.edu

Children's HOSPITAL • ST. LOUIS
BJC HealthCare

Washington University in St. Louis
School of Medicine

1

Disclosures

- Dr. Cooper has the following disclosures to declare:
- Consultant: Enzyvant
- No products related to this disclosure will be discussed
- All therapies discussed are off-label

PAAA
Pennsylvania Allergy & Asthma Association

Washington University in St. Louis
School of Medicine

2

Learning Objectives

- Identify signs of immune dysregulation in patients seen in the allergy/immunology clinic
- Demonstrate knowledge of genetic testing and interpretation for immune dysregulation syndromes
- Describe potential therapies for patients with immune dysregulation

Outline

- Case-based discussion of the spectrum of and treatment for immune dysregulation disorders
- Expanding spectrum of immune dysregulation in Primary Immunodeficiencies
- Genetic diagnosis of immune dysregulation

Outline

- Case-based discussion of the spectrum of and treatment for immune dysregulation disorders
- Expanding spectrum of immune dysregulation in Primary Immunodeficiencies
- Genetic diagnosis of immune dysregulation

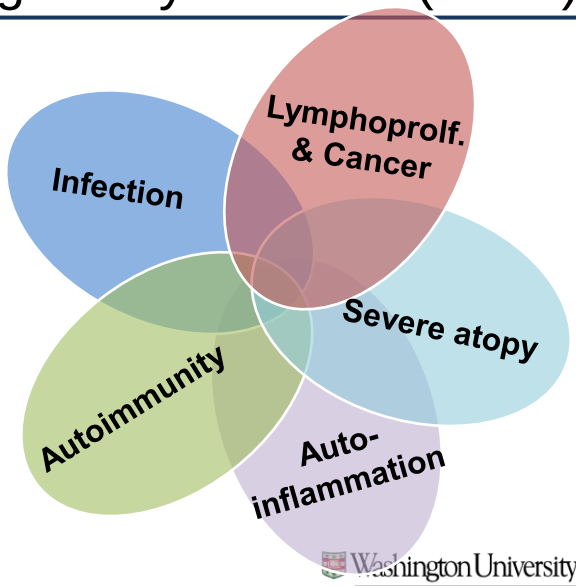
12

Primary Immune Regulatory Disorder (PIRD)

- A subset of Inborn Errors of Immunity (IEI)
- Abroad category of inborn errors characterized by altered regulation of the immune response

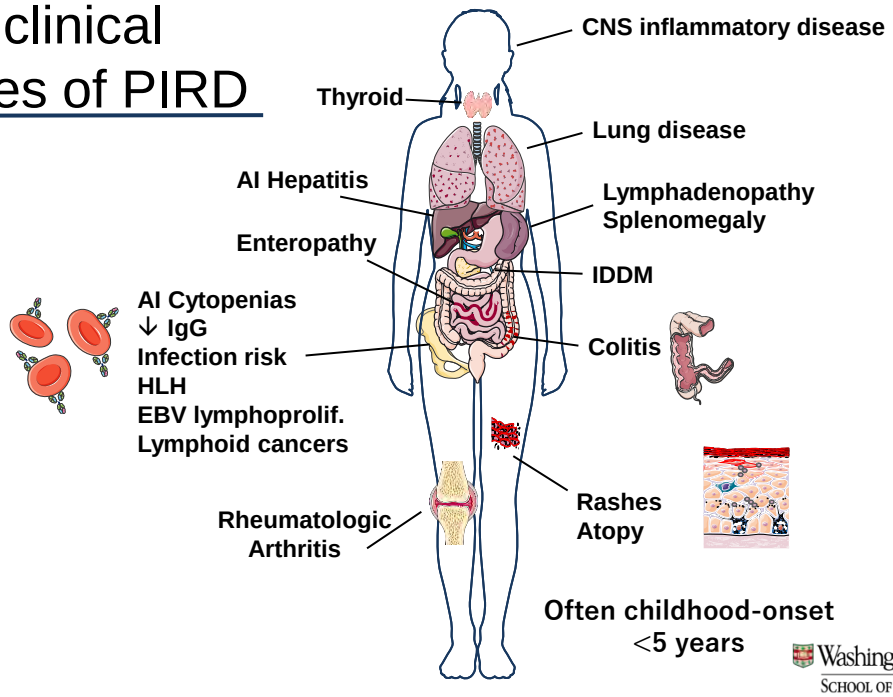


PAAA

Washington University in St. Louis
School of Medicine

13

Major clinical features of PIRD

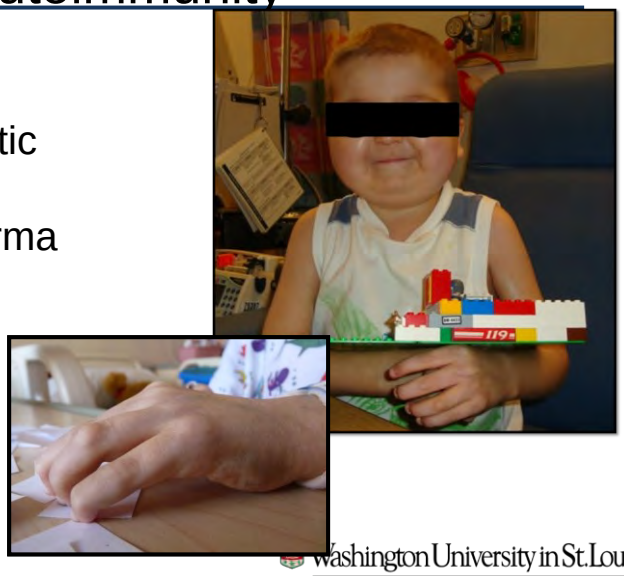


Washington University in St. Louis
School of Medicine

14

Case 2: 4 year old with autoimmune hepatitis and poly-autoimmunity

- Autoimmune hepatitis
- Severe autoimmune hemolytic anemia (Hgb 2.6)
- Overlap syndrome scleroderma and arthritis
- Short stature (<2 SD)
- No significant family history
- *No infections*



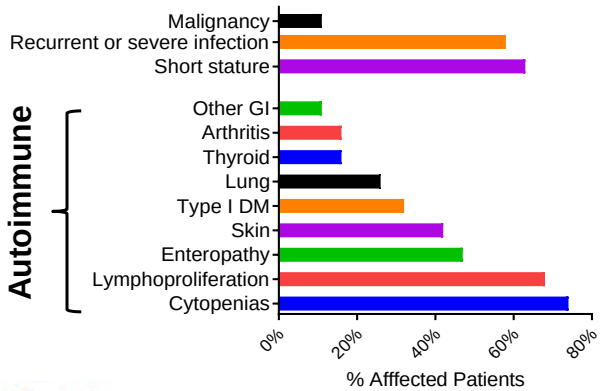
Patient photos used with permission

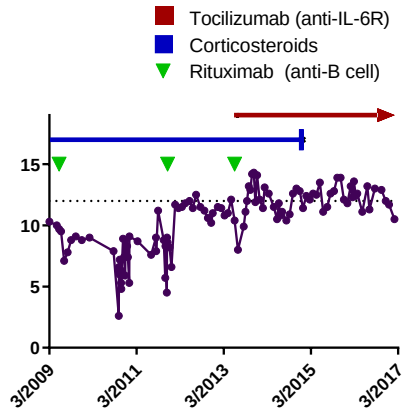
Washington University in St. Louis School of Medicine

15

Case 2 Dx: 4yo boy with AI hepatitis, anemia, arthritis

- **STAT3 gain-of-function syndrome**: early-onset poly-autoimmunity & infections with prominent cytopenias and enteropathy





Washington University in St. Louis School of Medicine

16

Case 3: 20 mo with anemia & rash

- 20 mo male infant with developmental delays presents with a year of intermittent fevers, rash, and anemia with new sternal and ankle pain
- Mother with history of recurrent oral and genital ulcers
- Exam: nodular skin rash
- CBC:
  - **Hgb – 6.5 g/dL** (11.5-13.5)
  - Plt – 483 cells/μL (150-400)
  - WBC – 8.6 cells/μL (6-17.5)
- ESR 77 (ref <20)
- CRP 69 (ref <10)

PAAA

Washington University in St. Louis
School of Medicine

17

Inpatient evaluation

- **Immunology/Rheumatology:**
  - **IgG 1581**, **IgA 185.5**, IgM 111.9
  - Normal immune subsets
  - Serum cytokines: elevated

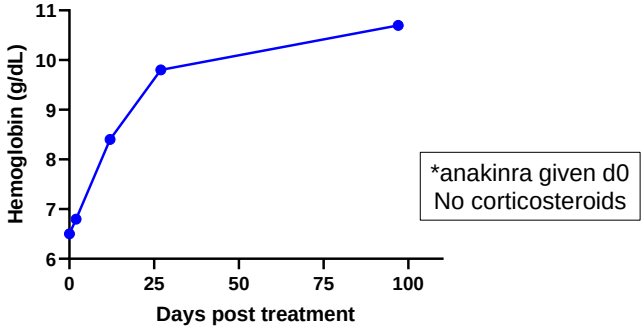
    TNF 21.5 [<10], **IL-6 258** [<5], **MCP-1 769** [<198], **IL-1β 22.1** [<20], **sIL2Rα >4000** [<9]
  - MRI of foot and chest – **osteomyelitis**
- **Neurology**:
  - Differential including Aicardi-Goutières
  - Brain MRI – normal; EEG normal; LP normal
- **Hematology**:
  - Coombs negative → anemia of chronic disease
  - Low concern for malignancy
- **Orthopedics**:
  - Bone biopsy – non-specific inflammation, no infection
- **Infectious diseases:**
  - Extensive evaluation negative for infection
- **Dermatology**:
  - Skin biopsy - Neutrophilic panniculitis
- **Genetic testing → 2-4 weeks**

Washington University in St. Louis
School of Medicine

18

Case 3 Dx: 1yo with anemia & rash

- Started anakinra (2mg/kg) → rapid improvement of rash and anemia.



- Genetic testing demonstrated a novel heterozygous truncation variant in **TNFAIP3 (A20)** causing haploinsufficiency of A20 ***(anti-TNF-a would have been another therapy to try given this)***

Washington University in St. Louis School of Medicine

19

Case 4: 5yo girl with autoimmune hepatitis

- 5 year old girl with 2 months of abdominal pain and weight loss
- Liver biopsy → autoimmune hepatitis
- Low calcium → hypoparathyroidism
- No family history of autoimmune disease
- Normal growth & development
- *No infections*

Patient photo provided by family and used with permission

Washington University in St. Louis School of Medicine

20

Case 4 Dx: 5yo girl with AI hepatitis

- Genetic testing demonstrated homozygous inherited pathogenic variants in *AIRE*, abnormal thymic selection of T cells
  - Autoimmune polyendocrinopathy, candidiasis & ectodermal dysplasia = **APECED** (or APS1).
- Change in clinical care including monitoring and treatment.

Mycophenolate mofetil
Rituximab
Discontinue steroids

Patient photos provided by family and used with permission

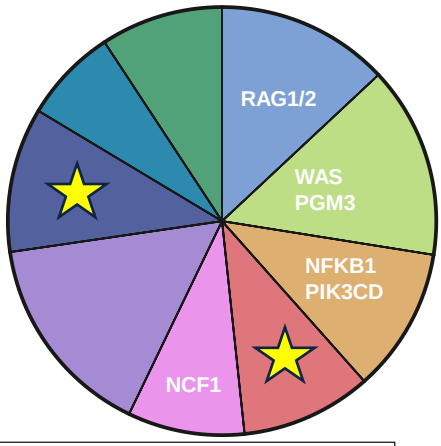
21

Outline

- Case-based discussion of the spectrum of and treatment for immune dysregulation disorders
- Expanding spectrum of immune dysregulation in Primary Immunodeficiencies
- Genetic diagnosis of immune dysregulation

22

Expanding spectrum of PIRD



- Cellular & humoral Immunity
- Combined with other features
- Antibody deficiencies
- Immune dysregulation
- Phagocytic defects
- Intrinsic & innate immunity
- Autoinflammatory
- Complement deficiencies
- Bone marrow failure

'Immunodeficienies' with immune dysregulation

Table 1. Autoimmune clinical manifestations by organ system of select primary immunodeficiency syndromes*

Gene	Disease name	AI Cyto-penias	Skin disease	Enter-opathy	Lung	Endocrin-opathy	Arthritis	Other
Severe Combined Immunodeficiency								
RAG1, RAG2	Omenn	++	++++	+++	-	+	-	++
PNP	SCID	+++	-	-	-	-	-	-
Combined Immune Deficiencies								
CD40L	XL HIgM	+++	++	++	-	++	++	++
ICOS	ICOS	+	++	+++	+	-	++	++
PI3KCD, PI3KR1	APDS	++	+	++	+++	++	++	++
22q11.2	DiGeorge	++	++	+	-	++	+	+
WAS	WAS	+++	++++	+	-	-	++	++
STIM1	STIM1 def	++++	-	+	-	-	-	-
STK4	MST1 def	+++	-	-	-	-	-	-

SCID = Severe combined immunodeficiency, defect in T cell numbers and/or function
CID = Combined immune deficiency, defects in T and B cell function and/or development

Kitcharoensakkul & Cooper, Textbook of Autoimmunity, 2020

Washington University in St. Louis School of Medicine

24

RAG Deficiency

SCID	OMENN	CID with G/AI
Infections	Infections	Normal T/B #
T/B deficiency	+/-T/B Cells	Hyperinflammation
➢ Transplant	Restricted repertoire	Autoimmunity
	Rash, GI disease	➢ Immune modulators
	➢ Transplant	

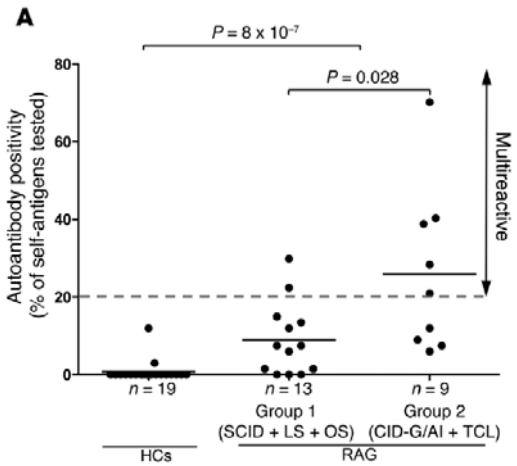
Notarangelo lab

CID with G/AI = combined immunodeficiency with granulomatosus and autoimmunity

Washington University in St. Louis
School of Medicine

25

Autoimmunity in RAG deficiency



- 22 patients with RAG-deficiency
- High rate of autoantibodies in the serum of patients
- Multiple anti-cytokine antibodies

PAAA

Walter et al, JCI, 2015

Washington University in St. Louis
School of Medicine

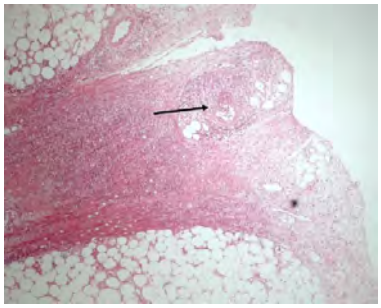
26

Autoimmunity with RAG1/2 deficiency

- AI cytopenias: anemia, thrombocytopenia, neutropenia
  - 10/13 CID patients

Case reports:

- Granulomatous disease (GPA mimic)
- Crohn's disease
- Vasculitis, lupus
- Juvenile arthritis
- Myasthenia Gravis
- Psoriasis
- Vitiligo

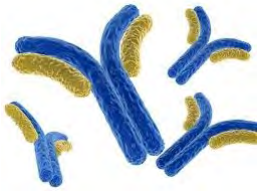


Hypomorphic RAG1 defect in a child presented with pulmonary hemorrhage and digital necrosis. Taskiran et al, Clin Immunol, 2018.

Antibody deficiencies & immune dysregulation

Gene	Disease name	AI Cyto-penias	Skin disease	Enter-opathy	Lung	Endocrin-opathy	Arthritis	Other
Predominantly Antibody Deficiencies								
BTK	XLA	++	+	++	-	-	++	-
Multiple/ unknown	CVID	++	++	++	++	++	++	++

XLA= **X linked agammaglobulinemia**, absence of B cells
CVID= **Common variable immunodeficiency**, antibody deficiency characterized by low immunoglobulin and abnormal response to vaccination



Kitcharoensakkul & Cooper, Textbook of Autoimmunity, 2020

CVID

Table 2. Selected complications from a large cohort ($n=473$) of common variable immune deficiency patients followed at one medical center over four decades

Associated condition	Number ($n=473$)	Percentage of cohort (%)
Infections only (no complications)	151	31.9
Chronic lung disease (functional/structural)	135	28.5
Bronchiectasis	53	11.2
Autoimmunity	134	28.6
Immune thrombocytopenic purpura (ITP)	67	14.2
Autoimmune hemolytic anemia (AIHA)	33	7
Gastrointestinal disease	73	15.4
Malabsorption	28	5.9
Inflammatory Bowel Disease (Crohn's disease, ulcerative colitis, ulcerative proctitis)	20	4.2
Liver disease/hepatitis	43	9.1
Granulomatous disease	46	9.7
Lymphoma	39	8.2
Cancer	33	7
Splenectomy	39	8.2

PAAA
Pennsylvania Allergy & Asthma Association

Washington University in St. Louis
School of Medicine

30

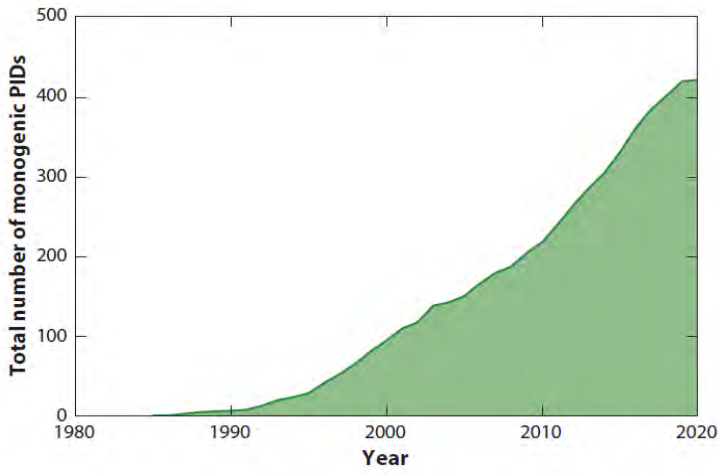
Cytopenias in CVID

- Autoimmune cytopenias can precede the diagnosis of CVID
- These patients are more likely to have other non-infectious complications (OR 2.9, Feuille et al, J Clin Immunol, 2018)
  - Enteropathy, interstitial lung disease, liver, lymphoproliferation, granulomatous disease)
  - May reflect an increased rate of monogenic (or digenic) cause for their CVID
- Treatments:
  - Can consider B cell depletion therapy for refractory cytopenias
  - Avoid splenectomy

Outline

- Case-based discussion of the spectrum of and treatment for immune dysregulation disorders
- Expanding spectrum of immune dysregulation in Primary Immunodeficiencies
- Genetic diagnosis of immune dysregulation

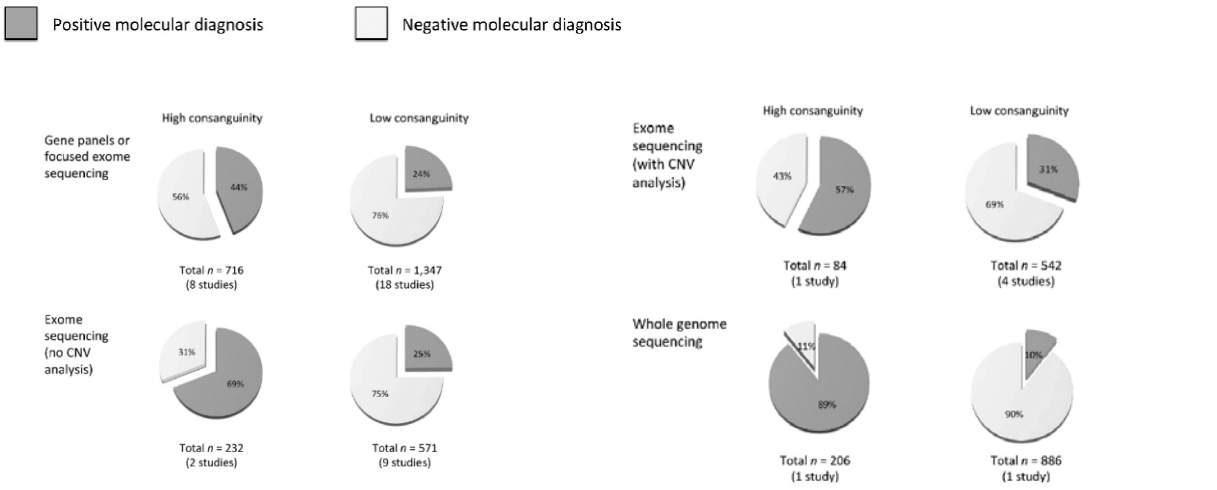
Genetic discovery of Inborn Errors of Immunity



Schmitt & Cooper, Ann Rev Immunol, 2021

33

Molecular diagnosis rates for IEI

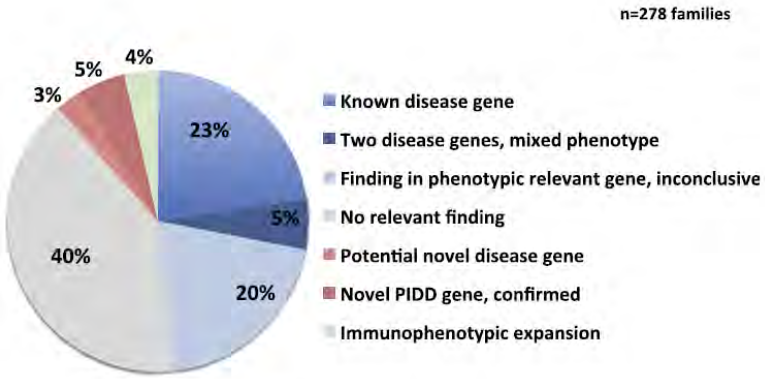


Chinn & Orange, Expert Review of Clin Immunol, 2020

34

Molecular diagnosis rates of IEI

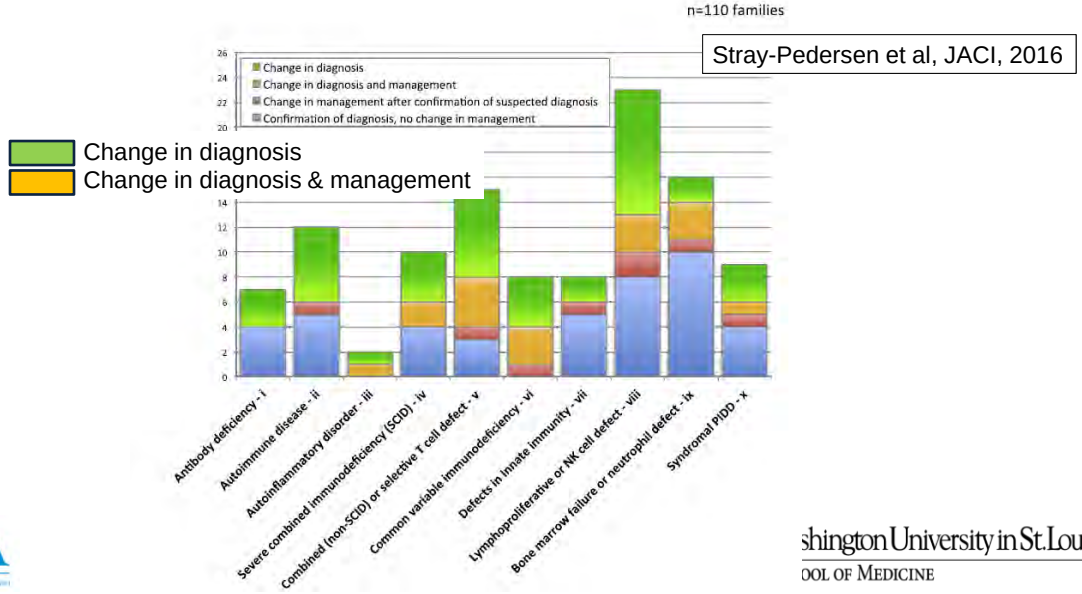
- Exome sequencing of 278 patients/families with IEI
- A genetic diagnosis was identified in ~40%



Stray-Pedersen et al, JACI, 2016

35

Molecular diagnosis: changes in diagnosis and treatment



36

What genetic test to order?

- Single gene testing:
  - Do you know with certainty what they have? Strong family history
- Panel-based testing:
  - Readily available, 2-3 week turnaround, test for ~500 genes associated with known disease
  - Cost: frequently low out-of-pocket or free testing through several programs
- Exome or genome sequencing:
  - Has the patient been through a diagnostic odyssey or does their phenotype not fit a clear syndrome?
  - Consider referral to genetic counselor, there may be secondary findings
  - Exome doesn't pick up everything
    - Hard to sequence by exome: NCF1, NEMO, TBX1…
    - intronic variants – ATM, BTK, JAK3, LRBA…
    - UTR and poly A variants – IL2RG, FOXP3, WAS…
- Chromosomal microarray:
  - Detect large insertions deletions, e.g., Chr22q11.2 microdeletion syndrome

Summary

- Inborn errors of immunity can present predominantly with immune dysregulation rather than infectious susceptibility
- Variation in genetic changes can lead to immune dysregulation in diseases typically associated with severe immunodeficiency
- Genetic testing can change diagnosis and treatment of patients

PENNSYLVANIA ALLERGY & ASTHMA ASSOCIATION

73RD PAAA ANNUAL MEETING

Oral Food Challenges in Infants and Toddlers

Presented by:
David Stukus, MD

Sunday, June 26, 2022
10:15 a.m. – 11:00 a.m.

PAAA
Pennsylvania Allergy & Asthma Association

Oral Food Challenges in Infants and Toddlers

David Stukus, MD, FAAAAI, FACAAI, FAAP

Professor of Clinical Pediatrics
Director, Food Allergy Treatment Center
Division of Allergy and Immunology
Nationwide Children's Hospital
Columbus, Ohio

@AllergyKidsDoc

Nationwide Children's — When your child needs a hospital, everything matters.
The Ohio State University College of Medicine

  - Member – Joint Task Force on Practice Parameters
  - Member - Board of Regents, ACAAI

Nationwide Children's — When your child needs a hospital, everything matters.
The Ohio State University College of Medicine

2

Objectives

- Identify optimal patients for oral food challenges
- Interpret food allergy test results in the proper context
- Incorporate information learned from oral food challenges into standard practice

3

Additional References for Infant OFCs

Oral Food Challenges in Infants and Toddlers

Justin Greiwe, MD[a,b,*]

KEYWORDS

• Food allergy • Oral food challenge • Anaphylaxis • Infants • Epinephrine

KEY POINTS

- Oral food challenges are a critical procedure to identify patients with IgE-mediated food allergy when the history and testing are not specific enough to confirm a diagnosis.
- Food challenges in infants and toddlers are both safe and practical in a clinical setting.
- Comprehensive past medical history is critical in the diagnosis of food allergy and should be used to determine subsequent testing and interpretation of results.
- Food allergies are associated with significant social and psychological consequences that often are overlooked by health care professionals.
- More emphasis needs to be placed on food challenge education and hands-on experience during fellowship training.

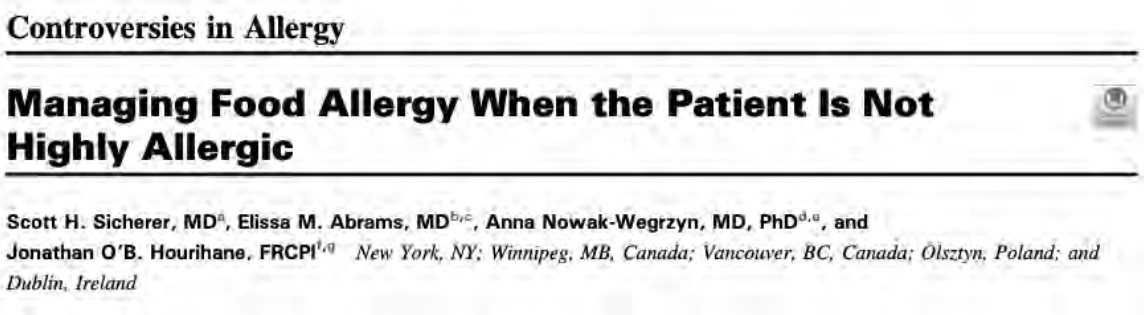
Here is My New FAVORITE Reference



Controversies in Allergy

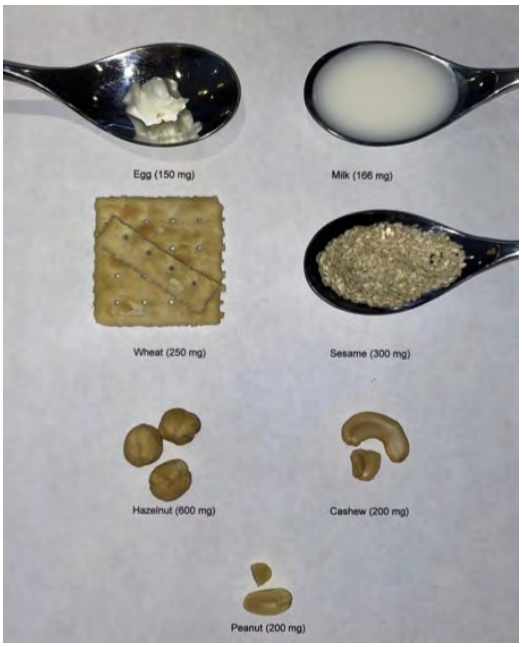
Managing Food Allergy When the Patient Is Not Highly Allergic

Scott H. Sicherer, MD[a], Elissa M. Abrams, MD[b,c], Anna Nowak-Wegrzyn, MD, PhD[d,a], and Jonathan O'B. Hourihane, FRCPI[f,g] *New York, NY; Winnipeg, MB, Canada; Vancouver, BC, Canada; Olsztyn, Poland; and Dublin, Ireland*

J Allergy Clin Immunol Pract 2022;10:46-55

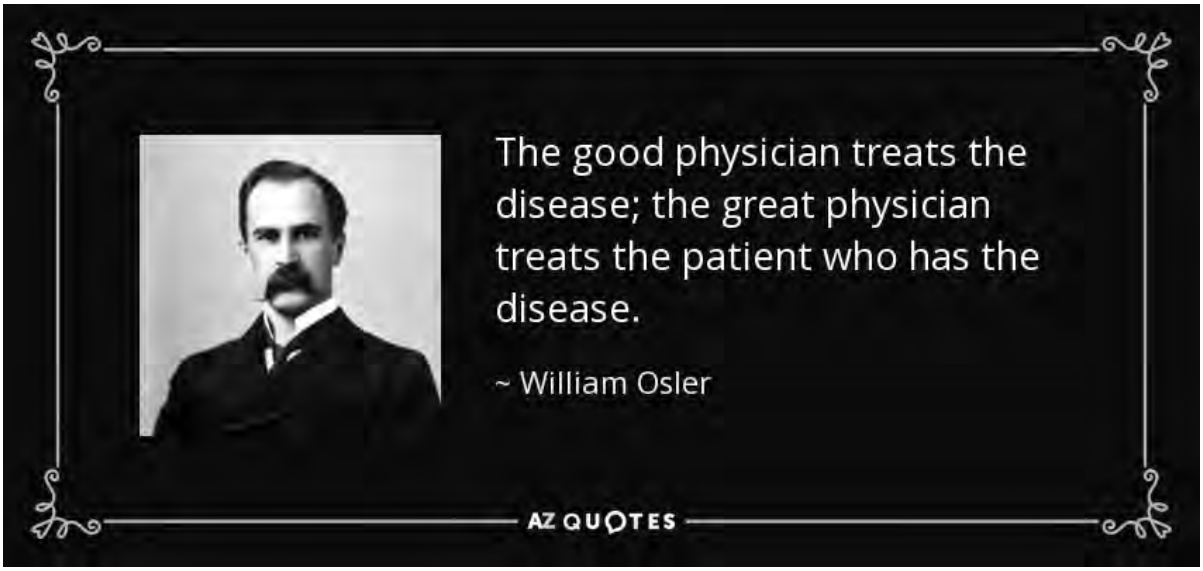
6

Eliciting Dose for 50% of the population with each food allergy



J Allergy Clin Immunol Pract 2022;10:46-55

7



8

“Treat the patient, not the numbers”

9

Initial Thoughts…

- Food allergies are grossly over diagnosed and misdiagnosed
- WE have the expertise to understand pathophysiology and clinical features of food allergy
- Testing does not diagnose food allergy – WE DO

10

Case 1

- 6 year old boy with peanut allergy
- Diagnosed 13 months of age
  - Facial hives after eating peanut butter, resolved with antihistamines
- Followed by multiple allergists
  - Repeat skin tests ~8 mm wheal
  - Serum levels:
    - 2012 = 2.64 kU/L
    - 2013 = 9.96 kU/L
    - 2015 = 5.39 kU/L
    - 2016 = 2.90 kU/L
    - 2017 = 5.60 kU/L

11

They said we have to treat all of his allergies at once to reduce the risk of severe reactions. I agree with you that it seems like it would overwhelm his system. They also want to skin test him for 110 allergens including foods he is eating without problems. This is our 5th allergist. Can I seriously fax or email you our records? We will drive to you to perform the oral challenge if you think he stands a chance of passing it. It'll be a 10 hour drive so we can't really do preliminary appointments. I have all of his blood work and a recent skin test tho. He starts kindergarten in august so I feel like we are running out of time and options. Thank you for your time.

12

Leaving his first Kindergarten field trip... never would've happened without you. Keep doing what your doing. It's changing lives.

First real Halloween! Had to share 😃

13

An Ideal Food Allergy Test

Noninvasive
- Readily available
- Easy to use and interpret

Reliable
- High positive predictive value
- Low false positives

Clinically relevant
- Threshold dose
- Severity of reaction

14

Current Food Allergy Tests

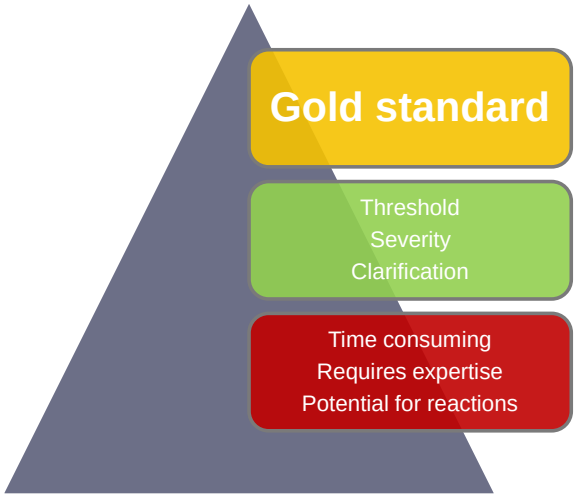
Noninvasive
- Readily available
- Easy to use and interpret

Reliable
- LOW positive predictive value
- HIGH false positives

Clinically relevant
- Threshold dose
- Severity of reaction

15

Oral Food Challenges



Upton JE, Bird JD. Ann Allergy Asthma Immunol. 2020;124(5):451-458.

16

OFCs in Clinical Practice

TABLE I. Reported number of oral food challenges performed during fellowship and in practice

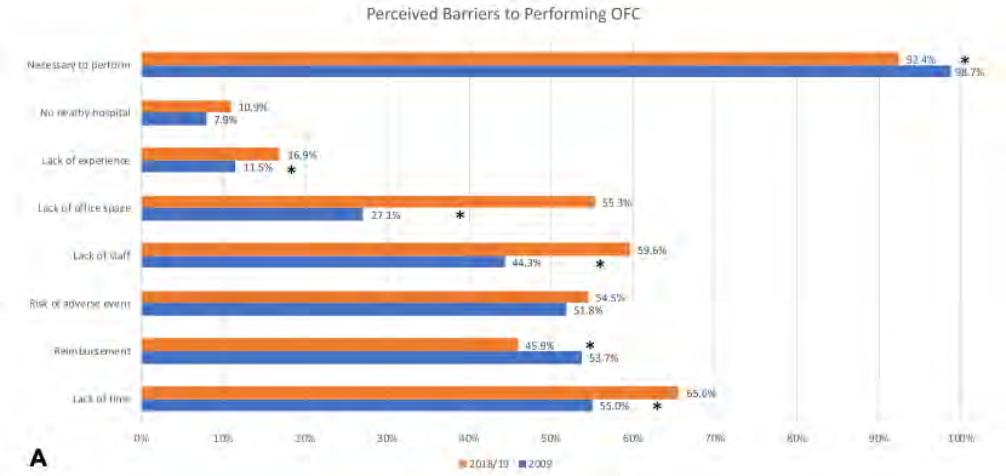
OFC performed in fellowship (per fellowship duration), total number	Percent reporting (535 answered)
0	28.97% (155)
1-10	26.92% (144)
11-20	15.70% (84)
21-30	9.72% (52)
31-40	3.93% (21)
41 or more	14.77% (79)
OFC performed in practice (per month), total number	**Percent reporting (513 answered)**
0	5.46% (28)
1-5	58.09% (298)
6-10	19.30% (99)
11-15	7.21% (37)
16-20	9.94% (51)

OFC, Oral food challenge.

Greiwe J, et al. J Allergy Clin Immunol Pract. 2020;8(10):3348-3355.

17

Barriers to Oral Food Challenges in Practice



Greiwe J, et al. J Allergy Clin Immunol Pract. 2020;8(10):3348-3355.

18

Oral Food Challenge

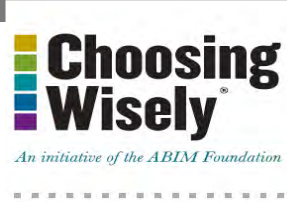
- Gold standard diagnostic procedure to establish a diagnosis of food allergy
- Can be utilized in **any** age group
- Can help determine:
  - If allergy is present when history/testing indeterminate
  - If tolerance has developed
  - If individual can tolerate other tree nuts not involved in suspected reaction

Bird JA, et al. Conducting an Oral Food Challenge: An Update to the 2009 Adverse Reactions to Foods Committee Work Group Report. J Allergy Clin Immunol Pract. 2020 Jan;8(1):75-90.e17.

19

The ONLY Absolute Contraindication…

20



American Academy of Allergy, Asthma & Immunology

Five Things Physicians and Patients Should Question

Don't perform unproven diagnostic tests, such as immunoglobulin G (IgG) testing or an indiscriminate battery of immunoglobulin E (IgE) tests, in the evaluation of allergy.

Don't perform food IgE testing without a history consistent with potential IgE-mediated food allergy.

https://www.choosingwisely.org/societies/american-academy-of-allergy-asthma-immunology/

21

What Makes a Good Screening Test?

Important Characteristics	Food IgE Skin and Serum Tests
Is asymptomatic disease prevalent?	No
Does the disease cause significant morbidity or mortality?	Potentially
Is treatment available to prevent disease through early detection?	No
Does the test accurately identify those with disease? (True positives)	No
Does the test inaccurately identify those without disease? (False positives)	Yes
Will inaccurate screening lead to unnecessary additional testing or treatment?	Absolutely

Inhal Toxicol. 2014 Nov; 26(13): 811–828.

22

Proper Interpretation of IgE Testing

- Use test results to determine sensitization vs no sensitization
- Size of sensitization helps determine likelihood of allergy being present
- All testing can help determine is the best approach to eating the food again
  - Home
  - Office
  - Avoidance

23

Case 2

- 2 year old boy diagnosed with milk, egg, peanut, soy, tree nut allergies
- No prior ingestion or immediate onset reactions
- Severe eczema as infant
- PCP obtained a food allergy panel at 9 months of age to 'find the cause'
  - Milk = 1.91 kU/L
  - Egg = 7.21 kU/L
  - Peanut = 5.63 kU/L
  - Soy = 0.67 kU/L

24

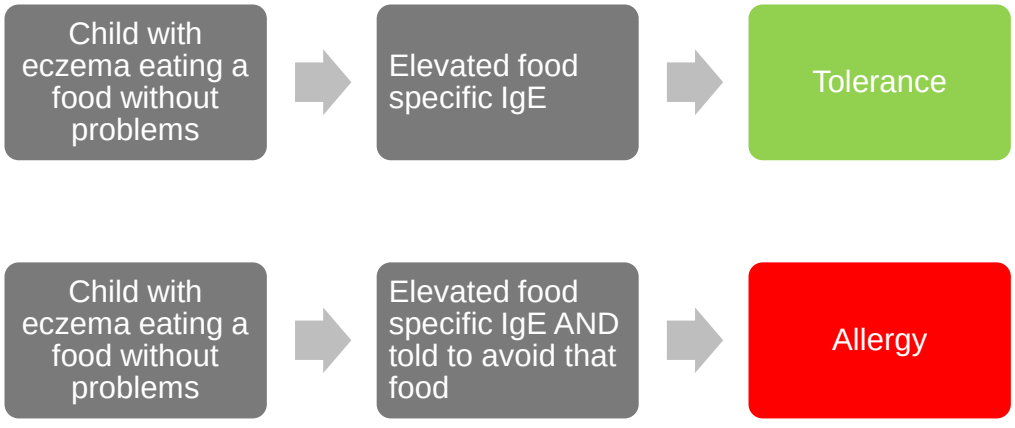
Case 2

- Family told to strictly avoid milk, egg, peanut, soy, tree nuts
- Mother told to remove from her diet while breast feeding
- Eczema gradually improved
- Tolerating fruits, vegetables, meats and also now soy products
- Sought evaluation by allergist at 2 years of age
- Repeat testing

Milk = 1.91 kU/L → 21.4 kU/L
Egg = 7.21 kU/L → 3.27 kU/L
Peanut = 5.63 kU/L → 12.4 kU/L

25

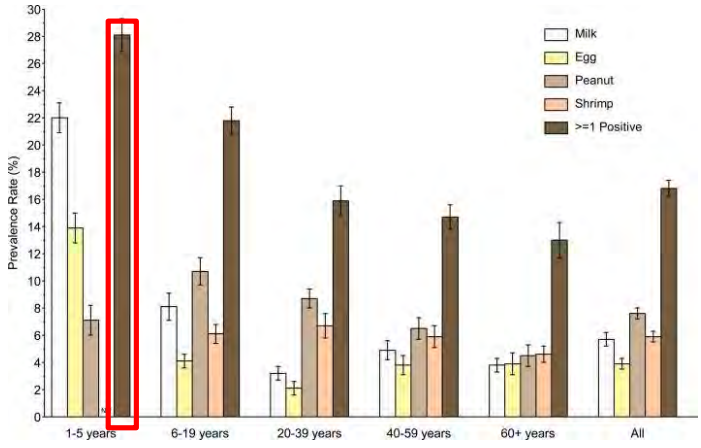
Primum non nocere
(First, do no harm)



Spergel J, et al. Pediatrics 2015;136(6):e1530-e1538

26

Rates of Sensitization > Clinical Allergy



- NHANES data reveal 28% of children with specific IgE > 0.35 kU/L
- Clinical allergy rates 2-6%

Liu AH et al. JACI. 2010;126(4):798-806.

27

We Should NOT Diagnose Food Allergy Based Upon:

- Testing alone
  - Especially if they are eating the food without problems!!!
- Eczema
- Chronic urticaria
- Parental concern
- Chronic GI symptoms
- Family history

28

Food Elimination is NOT a Benign Intervention

29

Rare Causes of IgE Mediated Allergy

Table 5. Contact Urticaria

Meats, fruits, vegetables, and other foodstuffs		Spices	Additives
Apple	Liver	Caraway seed	Acetic acid
Apricot	Lupin seed	Cayenne pepper	Amarith

Cross-Reactivity: Clinical vs Testing

Foods	Clinical Reactions	Testing
Peanut + Tree nuts	Low/none	Moderate
Tree nuts + Other tree nuts	Pecan + walnut Cashew + pistachio	High
Fish + Shellfish	Low/none	Low/none
Fish + Other fish	High	High
Shellfish + Other shellfish	High	High
Peanut + soy	Low/none	High
Wheat + grains	Low/none	High
Cow's milk + goat/sheep's milk	High	High

Sampson HA, et al. JACI. 2014;134(5).

32

Aeroallergen Cross Reactivity

Aeroallergen	Food
Dust mite Cockroach	Shellfish
Birch tree pollen	Peanut Fruits Soy
Grass pollen	Wheat
Tree pollen	Tree nuts

Sampson HA, et al. JACI. 2014;134(5).

33

Testing Does Not Predict Severity of Reactions

- 19 year old college sophomore
- Seeking 2nd opinion as previous allergist retired
- Seeking OIT for peanut
- “I’m deathly allergic to peanuts”

34

Peanut/Tree Nut Component Testing

- Predictive capabilities vary according to population background

Nut	Antigens Associated with Clinical Allergy
Peanut	Ara h 1, 2, 3
Hazelnut	Cor a 9, Cor a 14
Cashew	Ana o 3
Walnut	Jug r 1
Pecan	Car I 1, Car I 2
Pistachio	Pis v 1, Pis v 2

Santos AF, Shreffler WG. Clin Exp Allergy. 2017 Sep; 47(9): 1115–1124.

37

Epitope Mapping for Peanut Allergy

Results: In the validation using CoFAR2 and POISED cohorts, the peanut BBEA diagnostic test correctly diagnosed 93% of the subjects, with a sensitivity of 92%, specificity of 94%, a positive predictive value of 91%, and negative predictive value of 95%.

Conclusions: In validation of the peanut BBEA diagnostic test, the overall accuracy was found to be superior to existing diagnostic tests for peanut allergy including skin prick testing, peanut sIgE, and peanut component sIgE testing.

38

It Always Comes Back to Ingestion

Upton JE, Bird JD. Ann Allergy Asthma Immunol. 2020;124(5):451-458.

39

Safety of Oral Food Challenges

- Akuete et al determined OFCs are much safer than previously thought[1]
  - 6,377 OFCs from 2008-2013
  - **86% patients challenged w/o reaction**
  - **Only 2% required epinephrine**
  - **98% of OFCs completed without anaphylaxis**
- Stark contrast to previous studies
  - Epinephrine use during OFC 6-33%[1-6]
- Late-phase & biphasic reactions after OFCs are rare
  - 1.5-4% in previously published studies[7,8]
- 2 known fatalities since description of modern OFC procedure published in 1976

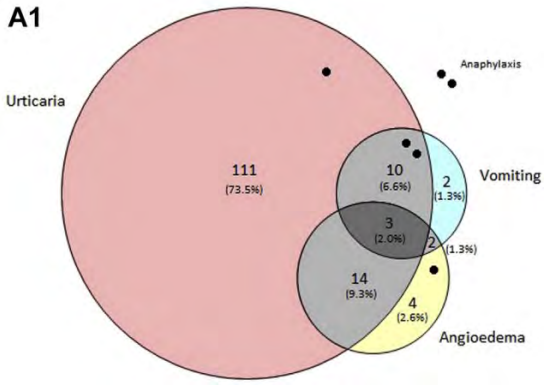
HealthNuts Food Challenges

- 598 peanut challenges at 1 year of age



Chan JC, et al. J Allergy Clin Immunol Pract. 2017;5(2):398-409.

42

Which Infants Should We Challenge?

- Anyone with a ~50% chance of not having symptoms
- OR…any family that wishes to better understand their child's allergic potential

TABLE II. Tests to assess the likelihood of obtaining a positive or negative OFC in children

	Serum food-IgE (kIU/L)*		SPT wheal (mm)*	
Food	~95% Positive	~50% Negative†	~95% Positive	~50% Negative†
Cow's milk	≥15[16] ≥5 if younger than 1 year[132]	≤2[23]	≥8[21]	
Egg white	≥7[16] ≥2 if younger than 2 years[133]	≤2[23]	≥7[21]	≤3[22]
Peanut	≥14[16]	≤2 with and ≤5 without history of peanut reaction[24]	≥8[17,21]	≤3[17]
Fish	≥20[16]			

Nowak-Wegrzyn A, Assa'ad AH, Bahna SL, et al. Work Group report: oral food challenge testing. J Allergy Clin Immunol 2009;123:S365-83.

43

Risk Assessment for OFCs

Low Risk of Reaction	**1. Recent accidental ingestion to small amount of food without clinical symptoms** **2. Favorable test results**
High Risk of Reaction	**1. Recent reaction to the food in the past 6-12 mo** **2. Diagnostic or high-positive test results**
Low Risk of Severe Reaction	**1. No past severe reactions** **2. Food not usually implicated in severe food-induced anaphylaxis (eg, meat, fruit, vegetable)** **3. No asthma**
High Risk of Severe Reaction	**1. Past severe reaction** **2. Severe reaction to trace amounts of food** **3. Food frequently implicated in fatal and near-fatal food-induced anaphylaxis (eg, peanut, tree nuts, fish, shellfish, seeds)** **4. Asthma (regardless of severity)** **5. Conditions that may affect the resuscitation: cardiovascular disease, difficult vascular access or intubation, β-blocker medication**

Nowak-Wegrzyn A, Assa'ad AH, Bahna SL, et al. Work Group report: oral food challenge testing. J Allergy Clin Immunol 2009;123:S365-83.

44

Day of: Reasons to Reschedule

TABLE I. Reasons to reschedule or delay an OFC

Consider postponing the OFC if the patient has any of the following:

- Concurrent illness, fever, or active respiratory symptoms (ie, wheeze or cough)
- Used a short-acting β-agonist within the preceding 48 h for cough or wheeze
- Poorly controlled asthma, AD, or allergic rhinitis
- Unstable cardiovascular disease
- Pregnancy
- Beta-blocker therapy
- Patient has not discontinued medications as outlined in Tables II and III

Bird JA, et al. Conducting an Oral Food Challenge: An Update to the 2009 Adverse Reactions to Foods Committee Work Group Report. J Allergy Clin Immunol Pract. 2020 Jan;8(1):75-90.e17.

45

Conversations with the Family

- Why pursue the oral challenge?
- Risks
- Benefits
- Likely outcome
- Possible outcome
- Are they willing to keep in the diet after the challenge?
  - 25% do NOT

Eigenmann PA, et al. Pediatr Allergy Immunol. 2006 Dec;17(8):601-5.

46

Risks of Unsuccessful Challenge

- Acute allergic reaction
- Anaphylaxis
- Emotional distress
- Anxiety

Bird JA, et al. Conducting an Oral Food Challenge: An Update to the 2009 Adverse Reactions to Foods Committee Work Group Report. J Allergy Clin Immunol Pract. 2020 Jan;8(1):75-90.e17.

47

Benefits of Unsuccessful Challenge

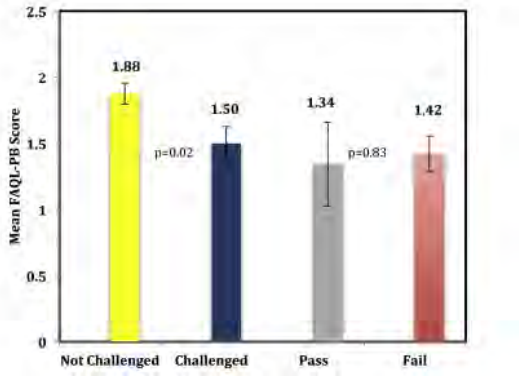
- Demonstration of signs/symptoms of allergic reaction
- Demonstration of possible threshold/reactive dose
- Demonstration of rapid response to therapy
  - Have the parents administer epinephrine
- Decreased anxiety
- Decreased dietary restrictions
  - Precautionary labeling
  - Dining out
  - Particularly powerful when families have imposed severe restrictions

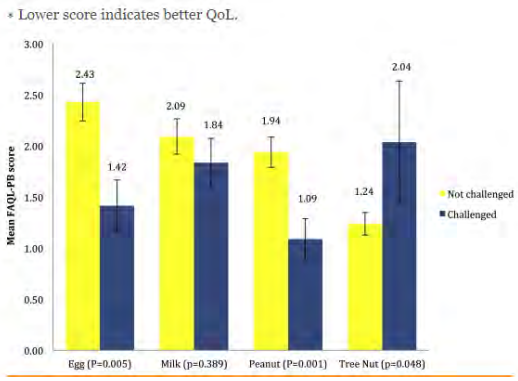
Bird JA, et al. Conducting an Oral Food Challenge: An Update to the 2009 Adverse Reactions to Foods Committee Work Group Report. J Allergy Clin Immunol Pract. 2020 Jan;8(1):75-90.e17.

48

Benefits of Unsuccessful Challenge

- Quality of life improves after a challenge





Franxman TJ, et al. J Allergy Clin Immunol Pract. 2015 Jan-Feb;3(1):50-6

49

Benefits of a Successful Challenge

- Life altering
- Improved quality of life

50

Tips for a Successful Day

- Discuss and REPEAT what day entails
- Address anxiety and potential scenarios before feeding
- Distraction, distraction, distraction
- Have families bring food, snacks, utensils, sippy cups
- Stock vehicles and masking agents in your office

51

Rate Limiting Step is ALWAYS Desire to Eat

- Offer choices
- Limit stress, act casual when refusal occurs
- Toddlers are always in charge
- Be prepared to not achieve desired amount of protein
- There is no absolute protocol to follow

Bird JA, et al. Conducting an Oral Food Challenge: An Update to the 2009 Adverse Reactions to Foods Committee Work Group Report. J Allergy Clin Immunol Pract. 2020 Jan;8(1):75-90.e17.

52

TABLE V. Age-appropriate portion sizes for open OFC

Allergen	Food	Protein content per serving size	Age				
			4-11 mo	1-3 y	4-8 y	9-18 y	19+ y
Egg	French toast (1 egg per 1 slice of bread)*	6 g if made with 1 large egg	1/2-1 slice	1/2-1 slice	1 slice	1-2 slices	1-2 slices
	Hard-boiled or scrambled egg	6 g/1 large egg	1/2-1 egg	1/2-1 egg	1 egg	1-2 eggs	1-2 eggs
Fish	Cooked fish†	6 g/1 oz	1/2-1 oz	1 oz	1 oz	2-3 oz	3-4 oz
Grains	Cooked cereal	5 g per 1/4 cup dry (oatmeal or Cream of Wheat)	1/4 cup	1/4 cup	1/4-1/2 cup	1/2-1 cup	1/2-1 cup
	Cooked pasta*/rice	3 g per 1/2 cup	1/4 cup	1/4 cup	1/4-1/2 cup	1/2-1 cup	1/2-1 cup
	Infant cereal	1-2 g per 1/4 cup	1/4-1/2 cup	1/4-1/2 cup			
	Muffin or roll bread‡	4-6 g/muffin or roll	1/4-1/2 piece	1/2 piece	1/2-1 piece	1 piece	1 piece
	Ready-to-eat cereal	2-6 g/1 cup	1/4-1/3 cup	1/4-1/3 cup	1/2-3/4 cup	3/4-1 cup	3/4-1 cup
	Slice bread	2-4 g/slice	1/4-1/2 slice	1/2 slice	1/2-1 slice	1-2 slices	2 slices
Milk	Infant formula	2-3 g/5 oz	4-8 oz				
	Milk	8 g/8 oz		4-8 oz	4-8 oz	8 oz	8 oz
	Cottage cheese	10-14 g/4 oz	1/4-1/2 cup	1/4-1/2 cup	1/2-1 cup	1/2-1 cup	1 cup
	Hard cheese	6-8 g/1 oz	1/4-1/2 oz	1/2 oz	1 oz	1 oz	1 1/2 oz
	Yogurt (NOT Greek style)	8 g/8 oz	1/4-1/2 cup	1/4-1/2 cup	1/2-1 cup	1/2-1 cup	1/2-1 cup
Peanut	Peanut (whole)	2 g/~8 peanuts			16 pieces	16 pieces	16 pieces
	Peanut butter	8 g/1 tbsp	1 rounded tbsp‖	1-2 tbsp	1-2 tbsp	2 tbsp	2 tbsp
	Peanut flour or peanut butter powder	3 g/1 tbsp original or 2.25 g/1 tbsp chocolate flavor	1 rounded tbsp‖	1-2 tbsp	1-2 tbsp	2 tbsp	2 tbsp
	Peanut/chocolate candy cups (full-size)	0.875 g/1 cup		1-2 candy cups	1-2 candy cups	2-3 candy cups	2-3 candy cups
Shellfish	Shellfish§	5 g/1 oz	1/2-1 oz	1 oz	1 oz	2-3 oz	3-4 oz
Soy/legumes	Infant formula	2-3.1 g/5 oz	4-8 oz				
	Soy beverage	7 g/8 oz		4-8 oz	4-8 oz	8 oz	8 oz
	Cooked beans (kidney, black, chickpeas, lentils)	7-9 g per 1/2 cup	1/8-1/4 cup	1/4 cup	1/2-1/2 cup	1/2-1 cup	1 cup
	Tofu	8 g/3 oz Firm tofu	1/2-1 oz	1 oz	1 oz	2-3 oz	3-4 oz
	Yogurt	5 g/6 oz	1/4-1/2 cup	1/4-1/2 cup	1/2-1 cup	1 cup	1 cup
Tree nut	Almond	3 g/11 whole nuts			11 pieces	11 pieces	11 pieces
	Almond butter (Barney butter brand)	3 g/1 tbsp	1 tbsp ‖	1-2 tbsp	1-2 tbsp	1-2 tbsp	1-2 tbsp
	Brazil nut	3 g/4.5 nuts			4 1/2 pieces	4 1/2 pieces	4 1/2 pieces
	Cashew	3 g/10 whole nuts			10 pieces	10 pieces	10 pieces
	Coconut flour	3 g/1 tbsp	1 tbsp	1-2 tbsp	1-2 tbsp	2-3 tbsp	2-3 tbsp
	Coconut milk‖	3 g/3 oz		3 oz	3 oz	4-8 oz	4-8 oz
	Hazelnut	3 g/3 tbsp hazelnuts or hazelnut meal			3 tbsp	3 tbsp	3 tbsp
	Pecan (halves)	3 g/25 halves			10-25 halves	25 halves	25 halves
	Pine nuts	3.5 g/3 tbsp pine nuts			3 tbsp	3-4 tbsp	4 tbsp
	Pistachio	3 g/20 whole nuts			20 pieces	20 pieces	20 pieces
	Walnut (halves)	3 g/10 halves			10 halves	10 halves	10 halves

Bird JA, et al. Conducting an Oral Food Challenge: An Update to the 2009 Adverse Reactions to Foods Committee Work Group Report. J Allergy Clin Immunol Pract. 2020 Jan;8(1):75-90.e17.

53

Multiple Tree Nut Challenges

- "Tree Nut allergy" is not a diagnosis

- Peanut + tree nuts (any) = no clinical cross reactivity
- Cashew + pistachio = HIGH cross reactivity
- Walnut + pecan + hazelnut = HIGH cross reactivity

Andorf S, et al. JACI: IP. 2017;5(5):1325-1334.

54

At Home Challenges

- Can consider when risk is low
  - Age
  - Prior history
  - Recent IgE results
  - Type of food
- Telemedicine visits???

Patients who cancel within 7-days (including same day) of scheduled oral food challenge

63

Food Allergy Treatment Center

Nationwide Children's
When your child needs a hospital, everything matters.

64

Our Mission

Provide a comprehensive center dedicated to evidence based and personalized food allergy management for individual families, our community, and beyond.

65

Hi - would you mind if one of our media folks from the hospital reached out to you? Please let me know if it's ever too much!!! Thanks - hope all is well

May 8, 2019, 10:04 AM ✓

Of course not! It'll never be too much. My hope is that more doctors will perform oral challenges and more parents will feel comfortable doing them. 😁

Thanks for all you do!

May 8, 2019, 10:16 AM

66

Final Thoughts

- Oral food challenges offer a mechanism for families and patients to gain any semblance of control over a condition that is filled with uncertainty
- The information obtained is VALUABLE
- We can help our patients by giving them information, confidence, and experience

67

Thank You

68
